The table that follows gives a list of the technical and editorial changes from the previous issue of this document.

ITEM NUMBER	TYPE OF CHANGE	SUMMARY OF CHANGE
All pages	Editorial	Rebranding (AIRBUS / A220 logos).
Preamble	Editorial	Rebranding (Airbus).
Cross-reference list	Editorial	List has been moved at the beginning of the document for clarity. Changes to the list are not identified by revisions bars, they are listed individually below.
Cross-reference list	Technical	AFT CARGO BTL FAIL (Caution) Section 1 relief revised.
Cross-reference list	Technical	CREW OXY LO PRESS (Caution) Section 1 relief revised.
Cross-reference list	Technical	FUEL MAN XFR FAIL (Caution) Section 1 relief revised.
Cross-reference list	Technical	FWD CARGO BTL FAIL (Caution) Section 1 relief revised.
Cross-reference list	Technical	L PACK FAIL (Caution) Section 1 relief revised.
Cross-reference list	Technical	L PACK LEAK (Caution) Section 1 relief revised.
Cross-reference list	Technical	LAV SMOKE FAIL (Caution) Section 2 relief revised.
Cross-reference list	Technical	R PACK FAIL (Caution) Section 1 relief revised.
Cross-reference list	Technical	R PACK LEAK (Caution) Section 1 relief revised.
Cross-reference list	Technical	TAWS FAIL (Caution) Section 1 relief revised.
Cross-reference list	Technical	UNABLE RNP (Caution) Section 1 relief revised. Section 2 relief revised.
Cross-reference list	Technical	TAWS GPWS FAIL (Advisory) Section 1 relief revised.
Cross-reference list	Technical	TAWS MAP FAIL (Advisory) Section 1 relief revised.

ITEM NUMBER	TYPE OF CHANGE	SUMMARY OF CHANGE
Cross-reference list	Technical	TAWS TERR FAIL (Advisory) Section 1 relief revised.
Cross-reference list	Technical	TAWS WINDSHEAR FAIL (Advisory) Section 1 relief revised.
Cross-reference list	Technical	21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL CLSD (Info) Section 2 relief revised.
Cross-reference list	Technical	21 L PACK FAIL – L PACK INOP (Info) Section 1 relief revised.
Cross-reference list	Technical	21 L PACK OVHT – L RAM AIR REG VLV INOP (Info) Section 1 relief revised.
Cross-reference list	Technical	21 PACK FAULT – L RAM AIR REG VLV INOP (Info) Section 1 relief revised.
Cross-reference list	Technical	21 PACK FAULT – R RAM AIR REG VLV INOP (Info) Section 1 relief revised.
Cross-reference list	Technical	21 R PACK FAULT – R PACK INOP (Info) Section 1 relief revised.
Cross-reference list	Technical	21 R PACK OVHT – R PACK INOP (Info) Section 1 relief revised.
Cross-reference list	Technical	21 R PACK OVHT – R RAM AIR REG VLV INOP (Info) Section 1 relief revised.
Cross-reference list	Technical	24 ELECTRICAL FAULT – L GEN DEGRADED (Info) Section 1 relief revised.
Cross-reference list	Technical	24 ELECTRICAL FAULT – R GEN DEGRADED (Info) Section 1 relief revised.
Cross-reference list	Technical	26 FIRE SYSTEM FAULT – AFT CARGO BTL SQUIB REDUND LOSS (Info) Section 1 relief revised.
Cross-reference list	Technical	26 FIRE SYSTEM FAULT – FWD CARGO BTL SQUIB REDUND LOSS (Info) Section 1 relief revised.
Cross-reference list	Technical	44 CABIN COM FAULT – CKPT HANDSET INOP (Info) Section 1 relief revised.
21-51-01	Technical/Editorial	(M): In step B., the left air conditioning pack corrected to right air conditioning pack. (O): Info messages format harmonized (info) now reads (Info).

ITEM NUMBER	TYPE OF CHANGE	SUMMARY OF CHANGE
21-63-00	Technical	(O): NOTE 1 deleted.
21-90-01	Technical	(M): Typo correction in step C. (wrong breaker nomenclature was called).
27-53-01	Technical	(O): Procedure revised.
28-21-55	Technical	(P): Revised.
29-31-03	Technical	(O): In step B. (2)(a): Hydraulic circuit number revised.
30-11-09	Technical	(O): Note 1 and 2 added.
36-11-92	Technical	(O): In A.(1): Step added to reconfigure the bleed system for flight.
36-12-05	Technical	(O): Revised to reconfigure the XBLEED to AUTO prior to flight.
38-30-01	Technical	(M): Added a deactivation procedure for the 100% waste tank ultrasonic point level sensor.
49-14-19	Technical	(P): Revised.
49-62-05	Technical	(P): Revised.
21-00-097-01	Technical	(O): Revised.
27-00-201-01	Technical	(O): Procedure expanded.
27-00-213-02	Technical	(O): Revised.
27-00-213-04	Technical	(O): Revised.
27-00-223-04	Technical	(O): Revised.
30-00-003-01	Technical	(O): Step added to reconfigure the bleed system for flight.
30-00-005-01	Technical	(O): Step added to reconfigure the bleed system for flight.
30-00-013-01	Technical	(O): Step added to reconfigure the bleed system for flight.
30-00-017-01	Technical	(O): Step added to reconfigure the bleed system for flight.
30-00-019-01	Technical	(O): Step added to reconfigure the bleed system for flight.
30-00-027-01	Technical	(O): Step added to reconfigure the bleed system for flight.
36-00-009-01	Technical	(O): Step added to reconfigure the bleed system for flight.
36-00-011-03	Technical	(O): Step added to reconfigure the bleed system for flight.
36-00-013-01	Technical	(O): Step added to reconfigure the bleed system for flight.
36-00-031-01	Technical	(O): Step added to reconfigure the bleed system for flight.
36-00-035-03	Technical	(O): Step added to reconfigure the bleed system for flight.
36-00-037-01	Technical	(O): Step added to reconfigure the bleed system for flight.
49-00-007-01	Technical	(O): Revised.

THIS PAGE INTENTIONALLY LEFT BLANK

1. General

The Dispatch Deviation Guide (DDG) is intended to assist operators and maintenance organizations in developing the procedures necessary to operate the aircraft in various non-standard configurations as permitted by the Master Minimum Equipment List (MMEL) and as approved by Transport Canada (TC).

2. Background

A Master Minimum Equipment List (MMEL) is published for the A220 aircraft. Additional operator amplification is intended before use, since the MMEL does not always have the special procedures necessary to properly prepare and operate the aircraft. The items for which special procedures are necessary are identified in the MMEL by an (M) and/or an (O). (M) indicates that specific maintenance procedures must be accomplished to configure the aircraft for flight with the inoperative item. These procedures can be accomplished by maintenance personnel or others, as determined by the operator. (O) indicates that normal flight crew procedures must be modified or supplemented to account for the inoperative item. A dash (-) indicates that a variable quantity is installed or required.

It is the operator's responsibility to develop a Minimum Equipment List (MEL) with adequate procedures (using the DDG as a guide) and to get the approval of this MEL from the appropriate regulatory authority. The MEL cannot be less restrictive than the MMEL.

NOTE: The recommend (O) procedure(s) presented in the DDG do not address airline-specific operating requirements. Incorporation of these procedures into the operator's MEL must take applicable operating requirements into consideration.

3. Procedures

This section contains all items from the MMEL that require procedures. Items are given the same ATA number that appears in the MMEL, together with the title of the component or system that is affected.

The symbol (***) after the item title indicates an item that is not required by regulation but can be installed on some models of aircraft covered by the MMEL. This item can be included on the operator's MEL after the applicable regulatory authority has determined that the item is installed on one or more of the operator's aircraft. The symbol (***), however, must not be transcribe into the operator's MEL. Neither this policy nor the use of the symbol (***) give authority to install or remove an item from an aircraft.

In conjunction with this document, the operator must comply with the preamble of the MMEL. The procedures are technically correct, to the best of Airbus Canada Limited Partnership's knowledge, but are not approved by a regulatory authority. The MMEL takes precedence in the event of conflicting information. The AFM takes precedence over the MMEL and the DDG documents.

By publishing the procedures in this document, it does not mean that these are the only valid procedures. The operator can create and establish procedures that more closely meet his needs. The aircraft configuration, routes, special operational procedures, and operator's maintenance practices could have an effect on a given procedure.

Each procedure should be coordinated with or approved by the applicable regulatory authority.

The satisfactory accomplishment of all procedures, regardless of who performs them, is the responsibility of the operator.

A vertical bar (revision bar) in the left margin indicates a change, addition, or deletion in the adjacent text for the current revision of that page only. The change bar is removed at the next revision of that page.

A placard must be installed on each inoperative item to inform and remind the crew members and maintenance personnel of the condition of the equipment.

NOTE: The placards should be located adjacent to the control or indicator for the item affected. Unless otherwise specified, the wording and location of the placard will be determined by the operator.

4. Referenced Maintenance Procedures

The DDG MAINTENANCE (M) procedures give the appropriate steps to accomplish the maintenance procedure that is required by a proviso in a given item. However, for certain (M) procedures, due to the extent of the procedure (deactivation of a system for example), or as required in a step (to prepare the aircraft for maintenance, or to do a operation/function check), an Aircraft Maintenance Publication (AMP) data module number is referenced (refer to BD500-A-JXX-XX-XX-XXXXX-XXXX-X).

5. Thermal Circuit Breaker Acknowledgement – CB TRIP (advisory)

If a DDG procedure requires to open a thermal circuit breaker for dispatch, a CB TRIP (advisory) will show when a thermal circuit breaker is open and not acknowledge. This message may be removed by accessing the CB synoptic page and select the TRIP acknowledgment soft switch.

Trip acknowledgement will:

- Change the state to OUT, and
- Remove the CB TRIP (advisory) message from the EICAS if no other trip acknowledgement soft switches are active.

6. Cross-reference list

A Cross-reference list can be found before Section 2 of the DDG. It is presented as an assistance in relating CAS messages to the appropriate MMEL/DDG item(s). When MMEL relief exists for a component or a system, and that item impacts information presented on a system synoptic page, that synoptic page will reflect the inoperative condition of that item. This does not constitute a degradation of or failure within the affected synoptic page.

7. Modification Summary (ModSum) / Service Bulletin (SB) Reference List

The ModSum / SB Reference List provides a cross-reference between the ModSums and SBs and a description of their purpose.

A220-100 and A220-300 (Model BD-500-1A10 and BD-500-1A11)

00-01	Overhead Control Panel Pushbutton Annunciator (PBA) Switch Light (light function only) (Cont'd)								
11)	AIR Control Panel – L (R) PACK “FAIL”	C	2	0					
12)	AIR Control Panel – L (R) PACK “OFF”	C	2	0					

1. PLACARD (P)

- A. Put the applicable LIGHT FUNCTION INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. Not required.

NOTE: For an inoperative Pushbutton Annunciator (PBA) light function only, a redundant alternative indication is available on the EICAS display when light function is lost.

System & Sequence N°		Item	1.	2.	Number Installed		3.	Number Required For Dispatch	
								4. Remarks or Exceptions	
21 – <u>AIR CONDITIONING</u>									
20-01	Low Pressure Ground Connection (LPGC)								
	1) Check Valve								
	A) Inoperative closed	C	1	0	(M)(O)		May be inoperative closed provided: (a) Affected check valve is verified closed, and (b) LPGC is not used.		
	B) Inoperative open	C	1	0			May be inoperative open provided left air conditioning pack is considered inoperative.		
	2) Cover	C	1	0	(M)		May be inoperative or missing provided: (a) Associated check-valve is verified operative, (b) Extended overwater operations are not conducted, (c) Takeoffs and landings are not conducted on runways near water, and (d) LPGC access panel (CDL item 53-24) is installed and confirmed not missing.		

1. PLACARD (P)

- A. For an inoperative LPGC Check Valve, put a LOW PRESSURE GROUND CONNECTION CHECK VALVE INOPERATIVE placard inside the LPGC access door.
- B. For an inoperative or missing LPGC Cover, put the appropriate LOW PRESSURE GROUND CONNECTION COVER MISSING (INOPERATIVE) placard inside the LPGC access door.

2. MAINTENANCE (M)

- A. For an inoperative LPGC check valve, do the steps that follow:
 - (1) Open the LPGC access panel (191BB).
 - (2) Remove the LGPC Cover.

(3) Visually make sure that the LPGC valve flap is fully closed.

(4) Install the LGPC Cover.

(5) Close the LPGC access panel (191BB).

B. For an inoperative or missing LPGC Cover, do the steps that follow:

(1) Turn on the LH Air Conditioning Pack.

(2) Open the LPGC access panel (191BB).

(3) Visually make sure that the LPGC valve flap is closed.

(4) Make sure there is no whistling sound.

(5) Make sure there is no leak that can be felt with your hand.

(6) Close the LPGC access panel (191BB).

3. OPERATIONS (O)

A. For an inoperative closed LPGC check valve , use the Auxiliary Power Unit (APU) or engine bleed air to operate the air conditioning packs.

System & Sequence N°	Item	1.	2.	Number Installed	
				3.	Number Required For Dispatch
21 – <u>AIR CONDITIONING</u>					
21-19	Recirculation Fan (RFAN)	C	1	0	4. Remarks or Exceptions (M)(O) May be inoperative provided: <ul style="list-style-type: none"> (a) RECIRC AIR is selected OFF, (b) Associated check valve is verified operative, (c) Both Air Conditioning Packs are operative, (d) Forward cargo compartment heating is selected to LO HEAT or HI HEAT when live animals or temperature sensitive cargo is carried in forward cargo compartment, and (e) Operations are conducted in accordance with Airplane Flight Manual (AFM) Supplement 5 (Operations with Airplane Systems Inoperative).

1. PLACARD (P)

- A. Put a RECIRCULATION FAN INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For an inoperative RFAN, make sure that the recirculation fan check valve is not failed open as follows:
 - (1) On the Air control panel select the RECIRC AIR switch to OFF.
 - (2) Turn on the LH and the RH Air Conditioning Pack.
 - (3) Get access to the forward cargo compartment.
 - (4) On the AFT bulkhead, remove access Panels 123ELW and 124JRW.
 - (5) With your hand, make sure there is no airflow from the two recirculation filters.
 - (6) On the AFT bulkhead, install the access Panels 123ELW and 124JRW

3. OPERATIONS (O)

- A. For an inoperative RFAN, do the steps that follow:
 - (1) On the AIR control panel, select the RECIRC AIR switch to OFF.
 - (2) Make sure that RECIRC OFF is shown on the EICAS AIR synoptic page or RECIRC AIR OFF status message is shown on the EICAS.

- (3) Before each flight with both Air Conditioning Packs selected ON, make sure that the messages that follow are not shown:
- L PACK FAIL (CAUTION)
 - R PACK FAIL (CAUTION)
 - L PACK OVHT (CAUTION)
 - R PACK OVHT (CAUTION)
 - PACK FAULT (ADVISORY)
- (4) Make sure forward cargo compartment heating is selected to LO HEAT or HI HEAT when live animals or temperature sensitive cargo is carried in the forward cargo compartment.

System & Sequence N°	Item	1.	2. Number Installed		4. Remarks or Exceptions
			3.	Number Required For Dispatch	
21 – <u>AIR CONDITIONING</u>					
23-62 Floor Heaters, Flight Crew (FTWRM) ***	D	2	0	(M)	One or both may be inoperative provided affected heater is deactivated.

1. PLACARD (P)

- A. Put a L(R) FLIGHT CREW FLOOR HEATERS INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative Flight Crew Floor Heater, on the electronic circuit breaker synoptic page, set to OUT and LOCK the applicable circuit breaker(s) that follow(s) (refer to BD500-A-J24-00-00-06AAA-398D-A):
 - (1) For the pilot side:
 - CDC3-4-4 (L FOOT WARMER)
 - (2) For the copilot side:
 - CDC4-4-4 (R FOOT WARMER)

3. OPERATIONS (O)

- A. Not required.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
21 – <u>AIR CONDITIONING</u>						
23-64 Galley Fan (GFAN)	C		2	0	(M)	One or both may be inoperative provided: (a) Affected GFAN is deactivated, and (b) Associated Galley Heater (GHTR) is deactivated.

1. PLACARD (P)

- A. Put a GALLEY FAN AND HEATER INOPERATIVE placard on the affected galley control panel.

2. MAINTENANCE (M)

- A. For an inoperative Forward Galley Fan, on the electronic circuit breaker synoptic page, set to OUT and LOCK the circuit breakers that follows (refer to BD500-A-J24-00-00-06AAA-398D-A):
 - CDC3-6-1 (FWD GLY FAN)
 - CDC3-12-5 (FWD GLY HTR1)
 - CDC3-12-4 (FWD GLY HTR2)
 - CDC3-13-6 (FWD GLY HTR3)
- B. For an inoperative Aft Galley Fan, on the electronic circuit breaker synoptic page, set to OUT and LOCK the circuit breakers that follows (refer to BD500-A-J24-00-00-06AAA-398D-A):
 - CDC5-3-3 (AFT GLY FAN)
 - CDC5-7-4 (AFT GLY HTR1)
 - CDC5-7-5 (AFT GLY HTR2)
 - CDC5-7-6 (AFT GLY HTR3)

3. OPERATIONS (O)

- A. Not required.

NOTE: Colder ambient temperatures can be expected in the associated galley area.

System & Sequence N°	Item	1.	2.	Number Installed

21 – <u>AIR CONDITIONING</u>					
31-01	Cabin Pressure Control System (CPCS)	C	1	0	4. Remarks or Exceptions (M)(O) Except for extended operations, may be inoperative provided: <ul style="list-style-type: none"> (a) Aircraft crews are the only occupants of the aircraft, (b) Outflow Valve (OFV) is secured OPEN, (c) Flight is conducted in an unpressurized configuration at or below 10000 ft MSL, (d) Extended overwater operations are not conducted, (e) Takeoffs and landings are not conducted on runways near water, and (f) Both EFANs are operative.

1. PLACARD (P)

- A. Put a CABIN PRESSURE CONTROL SYSTEM INOPERATIVE placard on the PRESSURIZATION control panel.

2. MAINTENANCE (M)

- A. For an inoperative cabin pressure control system (unpressurized operation), deactivate the Outflow Valve (OFV) in the OPEN position (refer to BD500-A-J21-31-01-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative cabin pressure control system:
 - (1) Do the Unpressurized Flights Packs ON procedure.
 - (2) Make sure that the EMER DEPRESS switch is selected ON before each flight.
 - (3) Do not takeoff and land on runways near water.
 - (4) Make sure that extended overwater operations are not conducted.

System & Sequence N°	Item	1.	2.	Number Installed	3.	Number Required For Dispatch	4.	Remarks or Exceptions
21 – <u>AIR CONDITIONING</u>								
31-28	Outflow Valve Travel Limiter	C	1	0	(M)			May be inoperative provided: (a) The Outflow Valve Travel Limiter is verified inoperative in retracted position, and (b) Flights are conducted at or below FL 250.

1. PLACARD (P)

- A. Put a OUTFLOW VALVE TRAVEL LIMITER INOPERATIVE placard on the PRESSURIZATION control panel.

2. MAINTENANCE (M)

- A. For an inoperative Outflow Valve (OFV) Travel Limiter, make sure that the travel limiter of the OFV is inoperative in the retracted position as follows:
 - (1) On the PRESSURIZATION control panel, push the AUTO PRESS switch.
 - (2) On the EICAS display, make sure that status message CABIN PRESS MAN is shown.
 - (3) On the PRESSURIZATION control panel, lift the switch guard and push the EMER DEPRESS switch.
 - (4) On the EICAS display, make sure that caution message EMER DEPRESS ON is shown.
 - (5) Through the valve (or the muffler if installed), visually make sure that the OFV is fully open.

NOTE: Valve butterfly must be at 90° position inside the valve body to be considered fully open.
 - (6) On the PRESSURIZATION control panel, lift the switch guard and push the EMER DEPRESS switch.
 - (7) On the EICAS display, make sure that caution message EMER DEPRESS ON is not shown.
 - (8) On the PRESSURIZATION control panel, push the AUTO PRESS switch.
 - (9) On the EICAS display, make sure that status message CABIN PRESS MAN is not shown.

3. OPERATIONS (O)

- A. Not required.

33-00	Cabin Altitude Indication					
	1) Pressurized aircraft	C	1	0	(O)	May be inoperative provided: (a) Both auto pressurization modes are operative, (b) Cabin Differential Pressure Indication is operative, and (c) A table is available to convert Cabin Differential Pressure to Cabin Altitude.
	2) Unpressurized aircraft without passengers	D	1	0	(O)	May be inoperative provided: (a) Aircraft crews are the only occupants of the aircraft, (b) Flight is conducted in an unpressurized configuration at or below 10000 ft MSL, and (c) Both EFANs are operative.

1. PLACARD (P)

- A. Put a CABIN ALTITUDE INDICATION INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For pressurized flight with an inoperative cabin altitude indication, do the steps that follow:
 - (1) Make sure that the two pressurization modes are operative, as follows:
 - (a) On the PRESSURIZATION control panel, select the AUTO PRESS switch to MAN,
 - (b) Make sure that CABIN MAN PRESS status message is shown on the EICAS page,
 - (c) On the PRESSURIZATION control panel, select the AUTO PRESS switch to AUTO,
 - (d) Make sure that CABIN MAN PRESS status message is not shown on the EICAS page,
 - (2) Use the table that follows to convert cabin differential pressure to cabin altitude.

AIRCRAFT PRESSURE ALTITUDE (FEET)	CABIN ALTITUDE (FEET)	CABIN DELTA PRESSURE (PSI)
3000	0	1.5
5000	200	2.4
8000	500	3.5
10000	800	4.2
15000	1400	5.7
20000	2200	6.8
25000	3200	7.6
30000	4600	8.1
35000	5900	8.4
40000	7500	8.4
41000	7800	8.4

- B. For unpressurized flight with an inoperative cabin altitude indication, do the steps that follow:
- (1) Do the Unpressurized Flight Packs ON procedure.
 - (2) Make sure that the EMER DEPRESS switch, on the PRESSURIZATION control panel, is selected ON before each flight.
 - (3) Make sure that 21 EQUIP BAY COOL FAULT – EFAN INOP info message is not shown on the INFO page.

System & Sequence N°	Item	1.	2.	Number Installed		4. Remarks or Exceptions

1. PLACARD (P)

- A. Put a L (R) AIR CONDITIONING PACK(S) INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For an inoperative left air conditioning pack, remove access Panel 191CB and do a visual inspection to make sure that there is no duct disconnect downstream of the left air conditioning pack (refer to BD500-A-J53-82-32-01AAA-520A-A and BD500-A-J53-82-32-01AAA-720A-A).
- B. For an inoperative right air conditioning pack, remove access Panel 192CB and do a visual inspection to make sure that there is no duct disconnect downstream of the right air conditioning pack (refer to BD500-A-J53-82-32-01AAA-520A-A and BD500-A-J53-82-32-01AAA-720A-A).

3. OPERATIONS (O)

- A. For both Packs inoperative (unpressurized flight PACKS OFF), before each flight, do as follows:
 - (1) Do the Unpressurized Flight Packs OFF procedure.
 - (2) On the PRESSURIZATION control panel, make sure that the EMER DEPRESS switch is selected ON.
 - (3) On the AIR control panel, make sure that the two air conditioning packs are selected OFF.
 - (4) Make sure that 21 EQUIP BAY COOL FAULT – EFAN INOP (Info) is not shown on the INFO page.

NOTE: Trim air may be required available for cold day operation.

- B. For A/C with SB BD500-219001 or Production Modsum 500T101031 with an inoperative Left Air Conditioning Pack (operations at or below FL 310), before each flight:
 - (1) On the AIR control panel, select:
 - (a) L PACK pushbutton to OFF.
 - (2) Do the operations procedures for one air conditioning pack inoperative.
 - (3) Do not operate the aircraft above FL 310.
 - (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
 - (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).
- C. For A/C with SB BD500-219001 or Production Modsum 500T101031 with an inoperative Right Air Conditioning Pack (operations at or below FL 310), before each flight:
 - (1) On the AIR control panel, select:
 - (a) R PACK pushbutton to OFF.
 - (2) Do the operations procedures for one air conditioning pack inoperative.

-
- (3) Do not operate the aircraft above FL 310.
- I
- (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
 - (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).
- D. For A/C without SB BD500-219001 or Production Modsum 500T101031 and an inoperative Left Air Conditioning Pack (single Right Bleed operation), before each flight:
- (1) On the AIR control panel, select:
 - (a) L PACK pushbutton to OFF.
 - (b) L BLEED pushbutton to OFF.
 - (2) Do the operations procedures in Single Bleed configuration.
 - (3) Do not operate the aircraft above FL310.
- I
- (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
 - (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).
- E. For A/C without SB BD500-219001 or Production Modsum 500T101031 and an inoperative Left Air Conditioning Pack (Wing Anti Ice System (WAI) OFF operations), before each flight, do as follows:
- (1) On the AIR control panel, select:
 - (a) L PACK pushbutton to OFF.
 - (2) Do the operations procedures for one air conditioning pack inoperative.
 - (3) Do not operate the aircraft above FL310.
- I
- (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
 - (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).
 - (6) On the ANTI-ICE control panel, select:
 - (a) WING switch to OFF.
 - (7) Aircraft is not operated in known or forecast icing conditions.

F. For A/C without SB BD500–219001 or Production Modsum 500T101031 and an inoperative Left Air Conditioning Pack (operations at or below FL 190), before each flight, do as follows:

- (1) On the AIR control panel, select:
 - (a) L PACK pushbutton to OFF.
- (2) Do the operations procedures for one air conditioning pack inoperative.
- (3) Do not operate the aircraft above FL 190.

- (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
- (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).

G. For A/C without SB BD500–219001 or Production Modsum 500T101031 and an inoperative Right Air Conditioning Pack (single Left Bleed operation), do as follows:

- (1) On the AIR control panel, select:
 - (a) R PACK pushbutton to OFF.
 - (b) R BLEED pushbutton to OFF.
- (2) Do the operations procedures in Single Bleed configuration.
- (3) Do not operate the aircraft above FL310.

- (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
- (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).

H. For A/C without SB BD500–219001 or Production Modsum 500T101031 and an inoperative Right Air Conditioning Pack (Wing Anti Ice System (WAI) OFF operation), do as follows:

- (1) On the AIR control panel, select:
 - (a) R PACK pushbutton to OFF.
- (2) Do the operations procedures for one air conditioning pack inoperative.
- (3) Do not operate the aircraft above FL310.

- (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
 - (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).
-

-
- (6) On the ANTI-ICE control panel, select:
 - (a) WING switch to OFF.
 - (7) Aircraft is not operated in known or forecast icing conditions.
 - I. For A/C without SB BD500-219001 or Production Modsum 500T101031 and an inoperative Right Air Conditioning Pack (operations at or below FL 190), before each flight, do as follows:
 - (1) On the AIR control panel, select:
 - (a) R PACK pushbutton to OFF.
 - (2) Do the operations procedures for one air conditioning pack inoperative.
 - (3) Do not operate the aircraft above FL 190.
 - (4) Make sure that 26 FIRE SYSTEM FAULT – EQUIP BAY SMOKE REDUND LOSS (Info) is not shown on the INFO page.
 - (5) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).

System & Sequence N°	Item	1.	2.	Number Installed	
21 – <u>AIR CONDITIONING</u>				3. Number Required For Dispatch	
51-02 Packs High Flow Mode		C	1	0	4. Remarks or Exceptions
				(O)	PACK FLOW HI Mode may be inoperative provided both Air Conditioning Packs are operative.

1. PLACARD (P)

- A. Put a PACK FLOW HI MODE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For a pack flow high mode inoperative, to increase the air flow in case of smoke, do the steps that follow:
 - (1) On the AIR control panel, set the FWD CABIN temperature to full cold or full hot, as required.
 - (2) On the AIR control panel, set the AFT CABIN temperature to full cold or full hot, as required.

System & Sequence N°	Item	1.	2.	Number Installed		4. Remarks or Exceptions
				3.	Number Required For Dispatch	
21 - <u>AIR CONDITIONING</u>						
52-04	Emergency Ram Air Valve (ERAV)					
	1) Unpressurized aircraft without passengers	C	1	0	(M)(O)	Except for extended operations, may be inoperative provided: (a) Aircraft crews are the only occupants of the aircraft, (b) ERAV is secured OPEN, (c) Both packs are selected OFF, (d) Flight is conducted in an unpressurized configuration at or below 10000 ft MSL. (e) Extended overwater operations are not conducted, (f) Takeoffs and landings are not conducted on runways near water, (g) Inlet ducts of the Emergency Ram Air Valve (ERAV) and right pack are verified operative, and (h) Both EFANs are operative.
	2) Right pack considered inoperative					
	A) A/C with SB BD500-219001 or Production Modsum 500T101031	C	1	0	(M)(O)	Except for extended operations, may be inoperative provided: (a) ERAV is secured OPEN, (b) Right pack is considered inoperative (A/C with SB BD500-219001 or Production Modsum 500T101031), (c) Extended overwater operations are not conducted, (d) Takeoffs and landings are not conducted on runways near water, and (e) Inlet ducts of the Emergency Ram Air Valve (ERAV) and right pack are verified operative. (Cont'd)

21 – <u>AIR CONDITIONING</u>						
52-04	Emergency Ram Air Valve (ERAV) (Cont'd)					
	B) A/C without SB BD500-219001 or Production Modsum 500T101031	C	1	0	(M)(O)	Except for extended operations, may be inoperative provided: (a) ERAV is secured OPEN, (b) Right pack is considered inoperative (A/C without SB BD500-219001 or Production Modsum 500T101031), (c) Extended overwater operations are not conducted, (d) Takeoffs and landings are not conducted on runways near water, and (e) Inlet ducts of the Emergency Ram Air Valve (ERAV) and right pack are verified operative.

1. PLACARD (P)

- A. Put a EMERGENCY RAM AIR VALVE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For an inoperative ERAV:
 - (1) Remove access Panel 192GB (refer to BD500-A-J53-82-82-05AAA-520A-A).
 - (2) Do a visual inspection of the Emergency Ram Air Valve (ERAV) and Right Pack inlet ducts to make sure that there is no duct disconnect or misalignment.
 - (3) Deactivate the ERAV in the OPEN position (refer to BD500-A-J21-52-05-01AAA-560A-A).
 - (4) Install access Panel 192GB (refer to BD500-A-J53-82-82-05AAA-720A-A).

3. OPERATIONS (O)

- A. For an inoperative ERAV with both packs selected OFF, before each flight do the steps that follow:
- (1) Do the Unpressurized Flight Packs OFF procedure.
 - (2) Make sure that on the PRESSURIZATION control panel, the EMER DEPRESS switch is selected ON.
 - (3) Make sure both air conditioning packs are set to OFF.
 - (4) Make sure that no extended overwater operations are conducted.
 - (5) Make sure that takeoffs and landings are not conducted on runways near water
 - (6) Make sure that 21 EQUIP BAY COOL FAULT – EFAN INOP (info) message is not shown on the INFO page.

NOTE: Trim Air may be required available for cold day operation.

- B. For an inoperative ERAV with single left pack, do the steps that follow:
- (1) Make sure that no extended overwater operations are conducted.
 - (2) Make sure that takeoffs and landings are not conducted on runways near water

1. PLACARD (P)

- A. Put a the applicable L(R) RAM AIR REGULATING VALVE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For dispatch with one or both RARV secured open (associated pack in degraded mode):
 - (1) Deactivate affected RARV(s) in the OPEN position (refer to BD500-A-J21-52-03-01AAA-560A-A).

B. For dispatch with the right RARV inoperative (right pack OFF), once prior to first flight of relief period:

- (1) Remove access Panel 192GB and do a visual inspection of the Emergency Ram Air Valve (ERAV) and Right Pack inlet ducts to make sure that there is no duct disconnect or misalignment (refer to BD500-A-J53-82-82-05AAA-520A-A and BD500-A-J53-82-82-05AAA-720A-A).

3. OPERATIONS (O)

A. For dispatch with one or both RARV secured open (associated pack in degraded mode).

- (1) For the left RARV, as indicated by INFO messages 21 PACK FAULT – L RAM AIR REG VLV INOP, or 21 PACK OVHT – L RAM AIR REG VLV INOP, confirm that the bypass valve is operative, make sure the following info message is not shown.

21 PACK FAULT – L BYPASS VLV INOP

- (2) For the right RARV, as indicated by INFO messages 21 PACK FAULT – R RAM AIR REG VLV INOP, or 21 PACK OVHT – R RAM AIR REG VLV INOP, confirm that the bypass valve is operative, make sure the following info message is not shown.

21 PACK FAULT – R BYPASS VLV INOP

NOTE: Trim Air may be required available for cold day operation if both RARV are secured OPEN.

B. For dispatch of an inoperative right RARV as indicated by 21 R PACK OVHT - R PACK INOP (A/C with SB BD500-219001 or production Modsum 500T101031)

- (1) For relief with flight conducted in single pack configuration at or below FL310.

Before each flight:

- (a) Right pack is selected OFF.
- (b) Operations are conducted in single pack configuration.
- (c) Flight altitude is limited to FL310
- (d) Make sure that 26 FIRE SYSTEM FAULT - EQUIP BAY SMOKE DET REDUND LOSS message is not shown.

C. For dispatch of an inoperative right RARV as indicated by 21 R PACK OVHT - R PACK INOP (A/C without SB BD500-219001 or production Modsum 500T101031)

- (1) For relief with flight conducted in single pack / single bleed configuration at or below FL310.

Before each flight:

- (a) Right pack is selected OFF.
 - (b) Right bleed is selected OFF.
 - (c) Operations are conducted in single pack / single bleed configuration.
 - (d) Flight altitude is limited to FL310
 - (e) Make sure that 26 FIRE SYSTEM FAULT - EQUIP BAY SMOKE DET REDUND LOSS message is not shown.
- (2) For relief with flight conducted in single pack configuration at or below FL310 / no icing conditions.

Before each flight:

- (a) Right pack is selected OFF.
 - (b) Operations are conducted in single pack configuration.
 - (c) Flight altitude is limited to FL310
 - (d) Make sure that 26 FIRE SYSTEM FAULT - EQUIP BAY SMOKE DET REDUND LOSS message is not shown.
 - (e) Wing Anti Ice (WAI) system is selected OFF.
 - (f) Aircraft is not operated in known or forecast icing conditions..
- (3) For relief with flight conducted at or below FL190.

Before each flight:

- (a) Right pack is selected OFF.
- (b) Operations are conducted in single pack configuration.
- (c) Flight altitude is limited to FL190
- (d) Make sure that 26 FIRE SYSTEM FAULT - EQUIP BAY SMOKE DET REDUND LOSS message is not shown.

21 – <u>AIR CONDITIONING</u>						
55-02	Forward Cargo Shutoff Valve (FWD CSOV)					
	1) FWD cargo air OFF	D	2	0	(M)(O)	One or both may be inoperative provided: <ul style="list-style-type: none"> (a) Both FWD CSOV are secured CLOSED, (b) FWD CARGO switch is selected OFF, and (c) Live animals or temperature sensitive cargo is not carried in the forward cargo compartment.
	2) Specified material prohibited in FWD cargo	C	2	0	(O)	One or both may be inoperative provided cargo is not carried in the forward cargo compartment. <p>NOTE: Unit Load Devices (ULDs) may be carried in the associated compartment provided no cargo is carried on or in their devices. For ballast purposes, use of bags (made of fiberglass or Kevlar) or sand or ingots of non-magnetic metals (such as lead) is acceptable.</p>

1. PLACARD (P)

- A. Put a FORWARD CARGO SHUTOFF VALVE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For dispatch with both FWD CSOV secured CLOSED, do as follows:
 - (1) Deactivate the forward fuselage FWD CSOV in the CLOSED position (refer to BD500-A-J21-23-01-01AAA-560A-A).
 - (2) Deactivate the mid fuselage FWD CSOV in the CLOSED position (refer to BD500-A-J21-23-01-02AAA-560A-A).

NOTE: Cargo may need to be off-loaded from FWD cargo compartment to access the CSOVs.

3. OPERATIONS (O)

- A. For dispatch with both FWD CSOV secured CLOSED, before each flight do as follows:
- (1) On the AIR control panel, set the FWD CARGO switch to OFF.
 - (a) Make sure that CARGO indicator shows OFF on the AIR synoptic page, or
 - (b) Make sure that FWD CARGO AIR OFF (status) is shown on the EICAS page.
 - (2) Make sure that no live animals or temperature sensitive cargo are transported in the forward cargo compartment.
- B. For dispatch without securing both FWD CSOV closed, do as follows:
- (1) Create and follow procedures to ensure the forward cargo compartment remain empty.

21 – AIR CONDITIONING						
55-03	Aft Cargo Shutoff Valve (AFT CSOV)					
	1) Aft cargo air OFF	C	2	0	(M)(O)	One or both may be inoperative provided: (a) Both AFT CSOV are secured CLOSED, and (b) AFT CARGO Air switch is selected OFF.
	2) Specified material prohibited in AFT cargo	C	2	0	(O)	One or both may be inoperative provided: (a) Recirculation Fan (RFAN) is operative and selected ON, and (b) Cargo is not carried in the aft cargo compartment. <u>NOTE:</u> Unit Load Devices (ULDs) may be carried in the associated compartment provided no cargo is carried on or in their devices. For ballast purposes, use of bags (made of fiberglass or Kevlar) or sand or ingots of non-magnetic metals (such as lead) is acceptable.

1. PLACARD (P)

- A. Put a AFT CARGO SHUTOFF VALVE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For an inoperative AFT CSOVs do the steps that follow:
 - (1) Deactivate the mid fuselage AFT CSOVs in the CLOSED position (refer to BD500-A-J21-23-03-01AAA-560A-A).
 - (2) Deactivate the rear fuselage AFT CSOVs in the CLOSED position (refer to BD500-A-J21-23-03-02AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative AFT CSOV, both AFT CSOV deactivated CLOSED, do the steps that follow:
- (1) On the AIR control panel, set the AFT CARGO switch to OFF.
 - (2) Make sure that AFT CARGO AIR OFF status message is shown.
- B. For an inoperative AFT CSOV, do the steps that follow:
- (1) Make sure the recirculation fan is operative as follows:
 - (a) On the AIR control panel, select the RECIRC AIR switch to ON.
 - (b) Make sure that RECIRC AIR FAIL caution message is not shown.
 - (2) Operator to create and follow procedures to maintain associated cargo compartment empty.

Remarks or Exceptions (M)(O) May be inoperative provided: <ul style="list-style-type: none"> (a) TAPRV is secured CLOSED, (b) Both bleed air systems are operative, (c) Both Air Conditioning Packs are operative, and (d) Trim Air Shut-Off Valve (TASOV) is verified operative when live animals or temperature sensitive cargo is carried in the forward cargo compartment.

1. PLACARD (P)

- A. Put a TRIM AIR PRESSURE REGULATING VALVE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For an inoperative TAPRV, deactivate the TAPRV in the CLOSED position (refer to BD500-A-J21-61-01-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative TAPRV:

- (1) Make sure the following messages are not displayed:

- PACK FAULT (advisory)
- L(R) PACK FAIL (caution)
- L(R) PACK OVHT (caution)
- L(R) BLEED FAIL (caution)
- L(R) BLEED OVHT (caution)
- ENG BLEED MISCONFIG (caution)
- XBLEED FAIL (caution)

- (2) When live animals or temperature sensitive cargo is carried in the forward cargo compartment, make sure the following INFO messages are not displayed:

- 21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL CLSD

21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL OPEN

NOTE 1: When the deactivation procedure is completed, one of the following messages may show:

21 AIR SYSTEM FAULT – TRIM AIR PRV FAIL OPEN (info)

21 AIR SYSTEM FAULT – TRIM AIR PRV FAIL CLSD (info)

NOTE 2: When the deactivation procedure is completed, the TAPRV symbol on the AIR synoptic page may appear invalid or different from the actual valve position.

NOTE 3: Noise level might be increased.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
21 – <u>AIR CONDITIONING</u>						
63-01	Trim Air Shut-Off Valve (TASOV)	C	1	0	(M)(O) May be inoperative provided:	<ul style="list-style-type: none"> (a) TASOV is secured CLOSED, (b) Both bleed air systems are operative, (c) Both Air Conditioning Packs are operative, and (d) Trim Air Pressure Regulating Valve (TAPRV) is verified operative when live animals or temperature sensitive cargo is carried in the forward cargo compartment.

1. PLACARD (P)

- A. Put a TRIM AIR SHUT-OFF VALVE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. Deactivate the TASOV in the CLOSED position (refer to BD500-A-J21-61-11-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative TASOV:

- (1) Make sure the following messages are not displayed:

- PACK FAULT (advisory)
- L(R) PACK FAIL (caution)
- L(R) PACK OVHT (caution)
- L(R) BLEED FAIL (caution)
- L(R) BLEED OVHT (caution)
- ENG BLEED MISCONFIG (caution)
- XBLEED FAIL (caution)

- (2) When live animals or temperature sensitive cargo is carried in the forward cargo compartment, make sure the following INFO messages are not displayed:

- 21 AIR SYSTEM FAULT – TRIM AIR PRV FAIL CLSD

21 AIR SYSTEM FAULT – TRIM AIR PRV FAIL OPEN

NOTE 1: When the deactivation procedure is completed, if the TRIM AIR FAIL (caution) message is shown on EICAS, cycle the TRIM AIR pushbutton OFF then back to auto to clear the message.

NOTE 2: When the deactivation procedure is completed, one of the following messages may show:

21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL OPEN (info)

21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL CLSD (info)

NOTE 3: When the deactivation procedure is completed, the TASOV symbol on the AIR synoptic page may appear invalid or different from the actual valve position.

NOTE 4: Noise level might be increased.

1. PLACARD (P)

- A. Put the applicable IASC CHANNEL INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For an inoperative IASC 1A, do as follows:

- (1) On the Electrical Power Center (EPC) 1 open and collar the circuit breaker that follow (refer to BD500-A-J24-00-00-04AAA-398D-A):

EPC1-H7 (IASC 1A)

- B. For an inoperative IASC 1B or IASC 1C, do as follows:

- (1) On the Electrical Power Center (EPC) 2 open and collar the circuit breaker that follow (refer to BD500-A-J24-00-00-04AAA-398D-A):

EPC2-E6 (IASC 1B)

- C. For an inoperative IASC 2A, do as follows:

- (1) On the Electrical Power Center (EPC) 2 open and collar the circuit breaker that follow (refer to BD500-A-J24-00-00-04AAA-398D-A):

EPC2-E7 (IASC 2A)

D. For an inoperative IASC 2B or IASC 2C, do as follows:

- (1) On the right circuit breaker panel, open and collar the circuit breaker that follow (refer to BD500-A-J24-00-00-04AAA-398D-A):

R-CBP-D1 (IASC 2B)

3. OPERATIONS (O)

A. For an inoperative IASC 1A, before each flight.

- (1) Make sure that none of the following INFO messages are displayed:

21 AIR SYSTEM FAULT – IASC 1B INOP

21 AIR SYSTEM FAULT – IASC 1C INOP

21 AIR SYSTEM FAULT – IASC 2A INOP

21 AIR SYSTEM FAULT – IASC 2B INOP

21 AIR SYSTEM FAULT – IASC 2C INOP

21 AIR SYSTEM FAULT – L IASC ARINC INPUT LOSS

21 AIR SYSTEM FAULT – R IASC ARINC INPUT LOSS

- (2) Select TRIM AIR ON followed by OFF and verify that INFO message 21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL OPEN is not displayed.

B. For an inoperative IASC 1B, before each flight.

- (1) Make sure that none of the following INFO messages are displayed:

21 AIR SYSTEM FAULT – IASC 1A INOP

21 AIR SYSTEM FAULT – IASC 2A INOP

21 AIR SYSTEM FAULT – IASC 2B INOP

21 AIR SYSTEM FAULT – IASC 2C INOP

21 AIR SYSTEM FAULT – L IASC ARINC INPUT LOSS

21 AIR SYSTEM FAULT – R IASC ARINC INPUT LOSS

C. For an inoperative IASC 1C, before each flight.

- (1) Make sure that none of the following INFO messages are displayed:

21 AIR SYSTEM FAULT – IASC 1A INOP

21 AIR SYSTEM FAULT – IASC 2A INOP

- 21 AIR SYSTEM FAULT – IASC 2B INOP
- 21 AIR SYSTEM FAULT – IASC 2C INOP
- 21 AIR SYSTEM FAULT – L IASC ARINC INPUT LOSS
- 21 AIR SYSTEM FAULT – R IASC ARINC INPUT LOSS

D. For an inoperative IASC 2A, before each flight.

(1) Make sure that none of the following INFO messages are displayed:

- 21 AIR SYSTEM FAULT – IASC 1A INOP
- 21 AIR SYSTEM FAULT – IASC 1B INOP
- 21 AIR SYSTEM FAULT – IASC 1C INOP
- 21 AIR SYSTEM FAULT – IASC 2B INOP
- 21 AIR SYSTEM FAULT – IASC 2C INOP
- 21 AIR SYSTEM FAULT – L IASC ARINC INPUT LOSS
- 21 AIR SYSTEM FAULT – R IASC ARINC INPUT LOSS

E. For an inoperative IASC 2B, before each flight.

(1) Make sure that none of the following INFO messages are displayed:

- 21 AIR SYSTEM FAULT – IASC 1A INOP
- 21 AIR SYSTEM FAULT – IASC 1B INOP
- 21 AIR SYSTEM FAULT – IASC 1C INOP
- 21 AIR SYSTEM FAULT – IASC 2A INOP
- 21 AIR SYSTEM FAULT – L IASC ARINC INPUT LOSS
- 21 AIR SYSTEM FAULT – R IASC ARINC INPUT LOSS

F. For an inoperative IASC 2C, before each flight.

(1) Make sure that none of the following INFO messages are displayed:

- 21 AIR SYSTEM FAULT – IASC 1A INOP
- 21 AIR SYSTEM FAULT – IASC 1B INOP
- 21 AIR SYSTEM FAULT – IASC 1C INOP

10-00	Takeoff/Go Around (TOGA) Switches (Thrust Levers)					
	1) One TOGA switch inoperative					
	A) Category B	B	2	1	(O)	One may be inoperative provided: (a) Alternate procedures are established and used, and (b) Operations with steep approach are not conducted.
	B) Category C	C	2	1	(O)	One may be inoperative provided: (a) Alternate procedures are established and used, (b) Autopilot and flight director are not used below: <u>1</u> 2,000 feet AGL on ILS approaches; or <u>2</u> 500 feet AGL or MDA whichever is higher on all other approaches, (c) Operations with steep approach are not conducted. (d) APPR 2 (CAT II) and autoland operations are not conducted, and (e) RNP AR approach operations are not conducted.
	2) Both TOGA switches inoperative	B	2	0	(O)	Both may be inoperative provided: (a) Operations are conducted in accordance with Airplane Flight Manual (AFM) Supplement (Operations with Airplane Systems Inoperative), (Cont'd)

System & Sequence N°	Item	1.	2.	Number Installed
22 – <u>AUTO FLIGHT</u>				
10-00	Takeoff/Go Around (TOGA) Switches (Thrust Levers) (Cont'd)			
				3. Number Required For Dispatch 4. Remarks or Exceptions (b) Autopilot and flight director are not used below: <u>1</u> 2,000 feet AGL on ILS approaches; or <u>2</u> 500 feet AGL or MDA whichever is higher on all other approaches, (c) Operations with steep approach are not conducted. (d) APPR 2 (CAT II) and autoland operations are not conducted, and (e) RNP AR approach operations are not conducted.

1. PLACARD (P)

- A. Put a L(R) TOGA SWITCH(ES) INOPERATIVE placard on the throttle quadrant assembly.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For one inoperative Thrust Lever TOGA Switch, alternate procedures are established and used.

- (1) For a subsequent in-flight failure of the remaining Thrust Lever TOGA switch during a Go-Around, do as follows:

- (a) Fly the aircraft manually to applicable pitch attitude (See AFM Supplement for Operations with Airplane Systems Inoperative).

NOTE 1: Refer to the FCOM for Windshear Escape Procedures that is not based on the use of TOGA switches.

NOTE 2: After a manual Go-Around, the FMS will not automatically sequence waypoints and flightcrew must sequence the waypoint manually.

NOTE 3: After a manual Go-Around, the AT will not automatically be selected ON and commanding GA thrust.

NOTE 4: After a manual Go-Around, flightcrew will have to manually change from ILS to FMS navigation if in ILS.

B. For two inoperative Thrust Lever TOGA switches, during takeoff or go-around, do as follows:

- (1) Fly the aircraft manually to applicable pitch attitude (See AFM Supplement for Operations with Airplane Systems Inoperative).

NOTE 1: Refer to the FCOM for Windshear Escape Procedures that is not based on the use of TOGA switches.

NOTE 2: After a manual Go-Around, the FMS will not automatically sequence waypoints and flightcrew must sequence the waypoint manually.

NOTE 3: After a manual Go-Around, the AT will not automatically be selected ON and commanding GA thrust.

NOTE 4: After a manual Go-Around, flightcrew will have to manually change from ILS to FMS navigation if in ILS.

	17) Altitude Feet to Meter Selector Knob					
	A) Alternate procedures are established and used	B	1	0	(O)	May be inoperative provided alternate procedures are established and used.
	B) Not used for routine procedures	D	1	0		May be inoperative provided routine procedures do not require its use.
	18) UP/DN Selector Wheel	C	1	0	(O)	May be inoperative provided: (a) Flight Path Angle (FPA) Flight Director mode is considered inoperative, (b) Vertical Speed (V/S) Flight Director mode is considered inoperative, and (c) Alternate procedures are established and used.
	19) Bright/Dim Knob	B	1	0		May be inoperative provided brightness is acceptable to flight crew.
	20) Emergency Descent Mode (EDM) Guarded Push Button	C	1	0		May be inoperative provided operations are conducted at or below FL 250.
	21) Emergency Descent Mode (EDM) Push Button Guard	C	1	0		May be inoperative, damaged or missing.

1. PLACARD (P)

- A. Put the applicable FLIGHT CONTROL PANEL FUNCTION INOPERATIVE placard on the Flight Control Panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative FCP readout window, the flight crew must confirm the selection of the affected parameter on the Primary Flight Display (PFD) (or MAP format on Multifunction Windows (MFWs) or HUD, if applicable), when the knob of the associated FCP mode is rotated.
- B. For an inoperative FCP light bar, do the steps that follow:
 - (1) Do a lamp test.
 - (a) Make sure that the affected light bar is not illuminated.
 - (2) During each flight, to use the FD mode or function associated with the affected light bar, do the steps that follow:
 - (a) On the FCP, select the mode button or the function button.
 - (b) Make sure that associated mode or function shows active (if applicable) on both FMAs.
 - (3) During each flight, to de-select the FD mode or function associated with the affected light bar, do the steps that follow:
 - (a) On the FCP, de-select the mode button or the function button.
 - (b) Make sure that associated mode or function shows inactive (if applicable) on both FMAs.
- C. For an inoperative FCP Autothrottle (AT) pushbutton, operators must establish alternative cockpit procedures to advance the thrust levers as required during takeoff.
- D. For an inoperative FCP Flight Level Change (FLC) mode pushbutton, operators must establish alternative cockpit procedures that include the use of alternative vertical FD modes (e.g. V/S, FPA).
- E. For an inoperative FCP Flight Plan Angle (FPA) mode pushbutton, operators must establish alternative cockpit procedures that include the use of alternative vertical FD modes (e.g. V/S, FLC).
- F. For an inoperative FCP Vertical Speed (V/S) mode pushbutton, operators must establish alternative cockpit procedures that include the use of alternative vertical FD modes (e.g. FPA, FLC).
- G. For an inoperative FCP Heading (HDG) rotary knob, operators must establish alternate cockpit procedures to select heading value (e.g. disengage the AP, fly the aircraft manually to the desired heading as read on the PFD, use the Heading Push to Sync Pushbutton to select the current heading and then re-engage the AP).

NOTE: Autopilot function must remain engaged in RVSM airspace.

- H. For an inoperative FCP Altitude (ALT) push fine pushbutton, operators must establish alternative cockpit procedures to maintain altitudes that are not selectable.
- I. For an inoperative FCP Altitude Feet to Meter selector knob, before each flight, if the selector switch is not in the appropriate position for the airspace that operations will be conducted in, make sure that conversion chart (foot to meter or meter to foot) is readily available in the flight compartment.
- J. For an inoperative FCP UP/DN selector wheel, operators must establish alternative cockpit procedures for flight crew to use other vertical FD modes.

System & Sequence N°	Item	1.	2.	Number Installed		3.	Number Required For Dispatch	4.	Remarks or Exceptions
22 – <u>AUTO FLIGHT</u>									
31-01	Autothrottle Disconnect Buttons (Throttle Quadrant)								
	1) One inoperative	C	2	1					One may be inoperative.
	2) Both inoperative	C	2	0	(O)				Both may be inoperative provided: (a) AT push button on Flight Control Panel (FCP) is operative, and (b) Alternate procedures are established and used.

1. PLACARD (P)

- A. Put a AUTOTHROTTLE DISCONNECT BUTTONS INOPERATIVE placard on the Flight Control Panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For both Autothrottle Disconnect Buttons inoperative:
 - (1) To disconnect the autothrottle system, do as follows:
 - (a) Press the AT switch on the Flight Control Panel, or
 - (b) Manually override the autothrottle.

30-04	Crew Member Interphone System						
	1) Flight Deck/Cabin and Cabin/Cabin						
	A) Operations with passengers	B	–	1	(O)	May be inoperative provided:	<ul style="list-style-type: none"> (a) An operative flight deck/cabin interphone system (two way) is at an operative flight attendant seat, (b) The public address system is verified operative prior to each flight, and (c) Alternate communications procedures are established and used. <p>NOTE: Any station function(s) that operates normally may be used.</p>
	B) Operations without passengers	A	–	0	(O)	May be inoperative for non-passenger carrying operations for one flight day provided:	<ul style="list-style-type: none"> (a) Crew members are the only occupants of the aircraft, and, (b) Alternate procedures are established and used.
	2) Flight Deck to Ground						
	A) Procedures require flight deck to ground interphone	C	1	0	(O)	May be inoperative provided alternate procedures are established and used.	
	B) Procedures do not require flight deck to ground interphone	D	1	0		May be inoperative provided procedures are not dependent on its use.	

1. PLACARD (P)

- A. For an inoperative Flight Deck/Cabin and Cabin/Cabin Interphone System, put a INTERPHONE SYSTEM INOPERATIVE placard on the affected handset(s).
- B. For an inoperative Flight Deck to Ground Interphone System, put a INTERPHONE SYSTEM INOPERATIVE placard on the affected station(s) or on the service intercom panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative crew member interphone flight deck/cabin and cabin/cabin (for passengers carrying operations), before each flight, do as follows:
 - (1) Make sure that the Passenger Address (PA) system is operative from the flight deck and from each operative flight attendant seat.
 - (2) Create alternative procedures based on the use of the PA system.
 - (3) The pilot in command should brief the cabin crew members about the alternate emergency procedures to be used.
- B. For an inoperative crew member interphone flight deck/cabin and cabin/cabin (for non passenger carrying operations), before each flight, do as follows:
 - (1) Create alternative procedures to communicate emergency instructions to all crew members (e.g. use direct voice communication)
- C. For an inoperative crew member interphone flight deck to ground, create alternative communication procedures with ground crew.

				3. Number Required For Dispatch
				4. Remarks or Exceptions
				(a) Crew members are the only occupants of the aircraft, and
				(b) Alternate procedures are established and used.

1. PLACARD (P)

- A. Put a PUBLIC ADDRESS SYSTEM INOPERATIVE placard on the handsets.

2. MAINTENANCE (M)

- A. Not Required.

3. OPERATIONS (O)

- A. For an inoperative public address system (when required by regulations):

- (1) After the failure has occurred, create alternative procedures for communicating information to passengers when required (e.g. direct voice communication with the help of the megaphone if the emergency condition generates noise).
- (2) Before flight, do the steps that follow:
 - (a) The pilot in command must brief the cabin crew members on the procedures that will be used.
 - (b) Make sure that the flight compartment/cabin interphone system (two way) with associated calls (e.g. chimes) is operative as follows:
 - 1 Make an interphone call to a cabin station through the Audio control panel (ACP) and a boom or hand held microphone and make sure that communication is established.
 - 2 Make an interphone call between the flight compartment and the forward-cabin flight attendant station with the flight compartment handset, as follows:
 - a Find and pick up the COCKPIT PA HANDSET.
 - b ON the COCKPIT PA HANDSET, dial 22 for CI FWDHS.
 - c Make sure that the FWD PA HANDSET rings.
 - d Pick up the FWD FA PA HANDSET.

- e Make sure that communication is established.
 - f Press the RESET button, on the FWD FA PA HANDSET, to end the call from the COCKPIT PA HANDSET
 - g Make sure that communication is terminated.
 - h Put the FWD FA PA HANDSET on its cradle.
- B. For an inoperative public address system (when not requires by regulations):
- (1) Operator to develop alternate procedures for communicating information to passengers when required (e.g. direct voice communication with the help of the megaphone if the emergency condition generates noise).
 - (2) Prior to flight, the pilot in command must brief cabin crew members on the procedures which will be used.
- C. For an inoperative public address system (non-passenger carrying operations):
- (1) Prior to flight, the pilot in command must brief crew members on the procedures which will be used.

31-04	Handsets						
	1) Flight Deck Handset						
	A) Procedures require flight deck handset	C	1	0	(O)		May be inoperative provided: (a) Flight deck to cabin communication is operative, and (b) Alternate procedures are established and used.
	B) Procedures do not require flight deck handset	D	1	0			May be inoperative provided routine procedures do not require its use.
	2) Cabin Handsets	B	-	-	(O)		May be inoperative provided: (a) Fifty percent of cabin handsets are operative, (b) Operative handset(s) is located at an operative flight attendant seat, and (c) Alternate communications procedures between the affected flight attendant station(s) are established and used. <u>NOTE 1:</u> An operative handset at an inoperative flight attendant seat shall not be counted to satisfy the fifty percent requirement. <u>NOTE 2:</u> Any handset(s) function(s) that is (are) operative may be used.

1. PLACARD (P)

- A. Put a HANDSETS INOPERATIVE placard on the affected handset.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative flight deck handset, do the steps that follow for passenger address:

- (1) Use the hand held microphone.
- (2) Press and hold the microphone PTT and the PA transmit control on the Audio Control Panel (ACP) simultaneously, then speak.

NOTE: Communication normally conducted using the flight deck handset can be conducted using the headset/boom microphone or using the hand held microphone.

- B. For an inoperative cabin handset, do the steps that follow:

- (1) Create alternative procedures based on the use of the passenger address system and/or the cabin interphone system.
- (2) For aircraft with more than two cabin handsets, alternative procedures can be based on the remaining interphone terminals.
- (3) For aircraft with two cabin handsets, alternative procedures can be based on passenger address or direct verbal communication.
- (4) Before flight, the pilot in command must brief the cabin crew members on the alternative emergency procedures to be used.

73-01	Flight Deck Door Surveillance System ***										
	1)	Procedures require flight deck door surveillance system	B	1	0	(O)					May be inoperative provided alternate procedures are established and used.
	2)	Procedures do not require flight deck door surveillance system	D	1	0						May be inoperative provided procedures do not require its use.
	3)	Viewing port									
	A)	Procedures require an electronic flight deck door visual surveillance system	A	1	0	(O)					May be inoperative provided: (a) Alternate procedures are established and used, and (b) Repairs are made within three flight days.
	B)	Procedures do not require an electronic flight deck door visual surveillance system	C	1	0	(O)					May be inoperative provided: (a) An electronic flight deck door visual surveillance system is installed and operative, and (b) Alternate procedures are established and used.

1. PLACARD (P)

- A. For an inoperative flight deck door electronic surveillance system, put a FLIGHT DECK DOOR SURVEILLANCE SYSTEM INOPERATIVE placard on the cockpit door panel.
- B. For an inoperative flight deck door viewing port, put a VIEWING PORT INOPERATIVE placard on the cockpit door.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

A. For an inoperative flight deck door electronic surveillance system:

- (1) Crew coordination is required before opening the flight deck door in order to make sure that the aft area of the flight deck door is safe in normal or non-normal conditions.

Before opening the door, choose one of the method below:

- (a) METHOD 1: Do a check of the aft area of the flight deck door through the viewing port installed on the flight deck door panel, or
- (b) METHOD 2: Use the interphone system to speak with the cabin crew to make sure that the area is safe to open the flight deck door.

B. For an inoperative flight deck door viewing port before to open the flight deck door, do as follows:

- (1) Create alternative procedures in the event of failure of the two electronic systems and viewing port that can include the use of interphone system to properly allow communication between flight deck and cabin.
- (2) Make sure there is a crew coordination before the opening of the flight deck door in a normal or non-normal conditions. The electronic surveillance system can be used to make sure that the aft area of the flight deck door is safety.
- (3) Create procedures to make sure that the area aft of flight deck door is secure and cabin crew members requesting entry are not doing so under duress.

						4. Remarks or Exceptions	
24 – ELECTRICAL POWER							
12-01	VFG Oil System						
	1) Generator Oil Level Indication (Remote Oil Level Sensor – ROLS)						
	A) One or both ROLS inoperative for non-extended operations	A	2	0	(M)	Except for extended operations, may be inoperative provided: (a) Following info messages are not displayed: 24 ELECTRICAL FAULT – L GEN DEGRADED 24 ELECTRICAL FAULT – R GEN DEGRADED (b) Minimum oil level is verified once each flight day, and (c) Repairs are made prior to completion of next heavy maintenance visit.	
	B) One ROLS inoperative for extended operations	C	2	1	(M)	May be inoperative provided: (a) Following info messages are not displayed: 24 ELECTRICAL FAULT – L GEN DEGRADED 24 ELECTRICAL FAULT – R GEN DEGRADED, and (b) Minimum oil level is verified once each flight day.	

1. PLACARD (P)

- A. Put a VFG OIL LEVEL INDICATION INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative VFG Remote Oil Level Sensor (ROLS), once each flight day:
 - (1) On the affected side(s), make sure the oil level is within operating range on the VFG sight glass (refer to BD500-A-J24-21-01-01AAA-200B-A).

3. OPERATIONS (O)

- A. Not required.

20-44 Permanent Magnet Generator (PMG)	C	2	1		4. Remarks or Exceptions (M)(O) May be inoperative provided: (a) Affected PMG is disconnected, and (b) Both FBW Power Converters are operative.

1. PLACARD (P)

- A. Put a LEFT (or RIGHT) PMG INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative PMG, deactivate the affected PMG before dispatch (refer to BD500-A-J24-33-01-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative PMG, as indicated by the INFO message
24 ELECTRICAL FAULT – L FBW PC PMG INOP or
24 ELECTRICAL FAULT – R FBW PC PMG INOP, make sure that none of the INFO messages that follow are shown:

24 ELECTRICAL FAULT – L FBW PC INOP

24 ELECTRICAL FAULT – R FBW PC INOP

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
24 – <u>ELECTRICAL POWER</u>						
22-01	Auxiliary Power Unit Generator (AGEN) System [includes APU Generator (AGEN), APU Generator Control Unit (AGCU), APU Overvoltage Protection Unit (OPU3), APU Line Contactor (ALC), Line Current Transformer (LCT3)]	C	1	0		Except for extended operations, may be inoperative provided: <ul style="list-style-type: none"> (a) L VFG and R VFG systems are operative, and (b) APU GEN is selected OFF.

1. PLACARD (P)

- A. Put a AUXILIARY POWER UNIT GENERATOR INOPERATIVE placard on the ELECTRICAL control panel.

2. MAINTENANCE (M)

- A. Not required.

24 – <u>ELECTRICAL POWER</u>					
23-01	Ram Air Turbine (RAT) System – Deployed Sensor	C	1	0	(M)(O) May be inoperative provided RAT is visually verified stowed before each flight.

1. PLACARD (P)

- A. Put a RAM AIR TURBINE SYSTEM DEPLOYED SENSOR INOPERATIVE placard on the ELECTRICAL control panel.

2. MAINTENANCE (M)

- A. For an inoperative RAT deployed sensor, do a one time visual check of the RAT to make sure that the RAT is correctly stowed as follows:
 - (1) Deploy the RAT (refer to BD500-A-J24-23-01-01AAA-398B-A)
 - (2) Do the general visual check (refer to BD500-A-J24-23-01-01AAA-310D-A).
 - (3) Stow the RAT (refer to BD500-A-J24-23-01-01AAA-398C-A).

3. OPERATIONS (O)

- A. For an inoperative RAT deployed sensor, before each flight, visually make sure that the RAT is not deployed.

31-01 Transformer Rectifier Unit (TRU) 1 or 2	B	2	1		4. Remarks or Exceptions (M)(O) Except for extended operations, may be inoperative provided: (a) TRU 3 and remaining TRU are verified operative, (b) Affected TRU is deactivated, (c) Both VFG systems are operative, and (d) All EPCs are verified operative.

1. PLACARD (P)

- A. Put a TRANSFORMER RECTIFIER UNIT 1 (or 2) INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative TRU 1 (or 2), do the steps that follow:
 - (1) For an inoperative TRU 1, on Electrical Power Center (EPC) 1, open the circuit breaker that follows (refer to BD500-A-J24-00-00-04AAA-398D-A):
 - EPC1-A11 (TRU 1)
 - (2) For an inoperative TRU 2, on Electrical Power Center (EPC) 2, open the circuit breaker that follows (refer to BD500-A-J24-00-00-04AAA-398D-A):
 - EPC2-A4 (TRU 2)

3. OPERATIONS (O)

- A. For one inoperative TRU:
 - (1) Make sure that only one of the following info message is shown:
 - 24 TRU FAULT – TRU 1 INOP, or
 - 24 TRU FAULT – TRU 2 INOP
 - (2) Make sure that NONE of the following info message is shown:
 - 24 ELECTRICAL FAULT – EPC 1 DEGRADED
 - 24 ELECTRICAL FAULT – EPC 2 DEGRADED
 - 24 ELECTRICAL FAULT – EPC 3 DEGRADED

33-03	AC Bus Tie Contactor (BTC)						
1)	BTC 1	A	1	0	(O)	Except for extended operations with passengers, may be inoperative provided:	<ul style="list-style-type: none"> (a) EPC 2 is verified operative, (b) L VFG and R VFG Systems are operative, (c) External AC Power System is considered inoperative, and (d) Repairs are made within three flight days.
2)	BTC 2	A	1	0	(O)	May be inoperative provided:	<ul style="list-style-type: none"> (a) EPC 1 and BTC 3 are verified operative, (b) L VFG and R VFG Systems are operative, (c) APU GEN is considered inoperative, and (d) Repairs are made within three flight days.
3)	BTC 3	A	1	0	(O)	Except for extended operations with passengers, may be inoperative provided:	<ul style="list-style-type: none"> (a) EPC 1 and BTC 2 are verified operative, (b) L VFG and R VFG Systems are operative, (c) External AC Power System is considered inoperative, and (d) Repairs are made within three flight days.

1. PLACARD (P)

- A. Put a AC BUS TIE CONTACTOR 1 (or 2, or 3) INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative AC Bus Tie Contactor (BTC) 1:

(1) Make sure that info message 24 ELECTRICAL FAULT – EPC 2 DEGRADED is not shown.

- B. For an inoperative AC Bus Tie Contactor (BTC) 2:

(1) Make sure that info message 24 ELECTRICAL FAULT – EPC 1 DEGRADED is not shown.

(2) Make sure that AC BUS 1 can be powered by AC EXT PWR.

NOTE: If AC BUS 1 can be powered by AC external power then the BTC 3 is verified operative.

- C. For an inoperative AC Bus Tie Contactor (BTC) 3:

(1) Make sure that info message 24 ELECTRICAL FAULT – EPC 1 DEGRADED is not shown.

(2) Make sure that AC BUS 2 can be powered by APU GEN.

NOTE: If AC BUS 2 can be powered by the APU generator then the BTC 2 is verified operative.

	9) Lumbar Adjustments	C	4	0		May be inoperative in the lowest position provided seat is acceptable to affected crewmember.
	10) Thigh Lift Adjustments	C	2	0		May be inoperative provided seat is acceptable to affected crewmember.

1. PLACARD (P)

- A. Put the applicable PILOT/COPILOT SEAT ADJUSTMENT INOPERATIVE placard on the affected pilot seat.

2. MAINTENANCE (M)

- A. For inoperative fore/aft adjustments of the pilot seat, if necessary, do the steps that follow:
 - (1) Make sure the fore/aft position is acceptable to the crewmember.
 - (2) Disengage both metering pins from the seat track.
 - (3) Adjust the seat to a fore/aft position acceptable to the crewmember.
 - (4) Engage both metering pins into the seat track.
 - (5) If necessary, adjust the fore/aft position of the seat again, during the next crew change.
- B. For an inoperative pilot seat recline adjustment, do the steps that follow:
 - (1) Make sure that the recline position is acceptable to the crewmember.
 - (2) Secure the affected seat in the recline position as follows:
 - (a) Remove the seat pan cushion assembly (refer to BD500-A-J25-21-20-02AAA-520A-A).
 - (b) Lift the metering pins and move the seat to a position that is acceptable to the flight crewmember.
 - (c) Engage the two metering pins.
 - (d) Install the seat pan cushion assembly (refer to BD500-A-J25-21-20-02AAA-720A-A).

- (3) If necessary, adjust the recline position of the seat again, during the next crew change.
- C. For an inoperative pilot seat inboard armrest(s), if necessary, do the steps that follow:
- (1) Remove the seatback cushion and find the armrest spline within the cross-tube.
 - (2) Find and remove the armrest spline set-screw.
 - (3) Pull the armrest sideways until detached from the seatback.

3. OPERATIONS (O)

- A. For an inoperative pilot seat powered adjustment, do the steps that follow:
- (1) On the inboard side of the affected seat, set the vertical electrical power switch to the off position.
 - (2) Make sure that the vertical position is acceptable to the crewmember.
 - (3) If necessary, manually adjust the affected seat as follows:
 - (a) Lift the release lever on the outboard side of the seat, to adjust it in the vertical position.
 - (b) Keep body weight on the cushion pan while the lever is raised, to lower the seat.
 - (c) Lift body weight off the seat while the lever is lifted, to raise the seat.
- B. For an inoperative pilot seat manual vertical adjustment, do the steps that follow:
- (1) Make sure that the vertical position is acceptable to the crewmember.
 - (2) On the rear inboard side of the affected seat cushion, use the powered vertical adjustment switch to adjust the vertical position of the affected seat.
- C. For an inoperative pilot seat inboard armrest, do the steps that follow:
- (1) Rotate the armrest fully upright until detent holds.
 - (2) Slide the armrest into the seat back.
 - (3) If necessary, secure the armrest with adhesive tape.

62-01	Emergency Locator Transmitter (ELT)					
1)	Fixed ELT Systems	A	-	-	(M)	May be inoperative provided: (a) Placard is displayed in the flight deck indicating the date ELT has been removed, and (b) Repair or replacement is made within the time interval prescribed by regulations.
2)	Survival Type ELTs	D	-	-		Any in excess of those required by regulations may be inoperative or missing.
3)	Low Frequency Underwater Locating Beacon (LF-ULB) ***	D	1	0	(M)	May be inoperative provided: (a) It is not required by regulations, and (b) Placard is displayed in the flight deck indicating the date the LF-ULB has been removed.

1. PLACARD (P)

A. For an inoperative fixed Emergency Locator Transmitter (ELT) System :

- (1) Put a FIXED ELT MISSING placard on the ELT control panel.

NOTE: Placard must also indicate the date at which the fixed ELT was removed.

B. For an inoperative Survival Type Emergency Locator Transmitter System:

- (1) Put a SURVIVAL TYPE ELT INOPERATIVE placard on the inoperative ELT and in the flight deck.

C. For an inoperative Low Frequency Underwater Locating Beacon (LF-ULB):

- (1) Put a LOW FREQUENCY UNDERWATER LOCATING BEACON MISSING placard on the ELT control panel.

NOTE: Placard must also indicate the date at which the LF-ULB was removed.

2. MAINTENANCE (M)

A. For an inoperative fixed ELT:

- (1) Remove the fixed ELT (refer to BD500-A-J25-62-01-01AAA-520A-A).
- (2) Put a placard in the flight compartment with the date that the ELT was removed.

B. For an inoperative Low Frequency Underwater Locating Beacon (LF-ULB):

- (1) Remove the LF-ULB (refer to AMP).
- (2) Put a placard in the flight compartment with the date that the LF-ULB was removed.

3. OPERATIONS (O)

A. Not required.

63-02	Overwing Emergency Exit Slides Condition Indications	C	-	0	(M) May be inoperative provided associated overwing emergency exit slide pressure is verified to be operative before each flight.

1. PLACARD (P)

- A. Put an EMERGENCY EXIT SLIDE CONDITION EICAS INDICATION INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative Overwing Emergency Exit Slide Condition Indication, before each flight, select one of the methods that follow to make sure that the pressure indicator needle of the exit slide is within the green band:

(1) Method 1.

- (a) Do the extension of the flaps and the slats to Position 5 (full extend) (refer to BD500-A-J27-53-00-01AAA-913A-A).
- (b) Get access to the Aft Flap Track Panel (195BL(196BR)) Box Seal – Overwing Wing to Body Fairing (WTBF).
- (c) Use a mirror and a flashlight to make sure that the pressure indicator needle, of the OWEED escape slide, is in the green band.
- (d) Do the retraction of the flaps and the slats to position 0 (refer to BD500-A-J27-53-00-02AAA-913A-A).

(2) Method 2.

- (a) Put a WARNING placard on the OWEED escape slide to prevent all operation.
- (b) Disconnect the OWEED escape slide short cable (refer to BD500-J-52-21-17-01AAA-510A-A).
- (c) Rotate the OWEED escape slide and make sure that the pressure indicator needle, of the OWEED escape slide, is in the green band.
- (d) Connect the OWEED escape slide short cable (refer to BD500-J-52-21-17-01AAA-730A-A).
- (e) Remove the WARNING placard from the OWEED escape slide.

26 – FIRE PROTECTION						
15-05	Overhead CARGO BTL Panel					
1)	FWD FIRE PBA Switch Guard	C	1	0	(O)	May be damaged or missing provided live animals or temperature sensitive cargo is not carried in forward cargo compartment.
2)	AFT FIRE PBA Switch Guard	C	1	0	(O)	May be damaged or missing provided live animals or temperature sensitive cargo is not carried in aft cargo compartment.

1. PLACARD (P)

- A. Put a OVERHEAD CARGO BTL PANEL INOPERATIVE placard on the CARGO BTL control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative CARGO BTL panel FWD FIRE PBA or AFT FIRE PBA Switch Guard, establish and use procedures to make sure that all affected company personnel are aware of dispatch limitation.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
26 – <u>FIRE PROTECTION</u>						
16-01	Lavatory Smoke Detection Systems					
	1) Lavatory not used by passengers	C	-	-	(M)(O)	<p>May be inoperative provided:</p> <ul style="list-style-type: none"> (a) Associated FIREX Control Unit Channel is operative, (b) Associated lavatory is not used by passengers for any purpose, (c) Associated lavatory waste receptacle is empty, (d) Associated lavatory door is locked closed and placarded INOPERATIVE – DO NOT ENTER, (e) Associated lavatory is used only by crew members, (f) In-flight service waste bags are not stored in associated lavatory, and (g) For extended operations with passengers there are at least two serviceable lavatories on the aircraft. <p>NOTE: Above-mentioned provisos are not intended to preclude crew member lavatory inspections, which must be detailed in (O) procedures.</p>
	2) Operations without passengers	B	-	0	(O)	<p>For each lavatory, the lavatory smoke detection system may be inoperative for non-passenger carrying operations provided:</p> <ul style="list-style-type: none"> (a) Crew members are the only occupants of the aircraft, (b) Occupants are briefed as to which smoke detection system(s) is/are inoperative, and <p>(Cont'd)</p>

26 – <u>FIRE PROTECTION</u>					
16-01	Lavatory Smoke Detection Systems (Cont'd)				<p>(c) In-flight service waste bags are not stored in lavatory.</p> <p><u>NOTE:</u> Above-mentioned provisos are not intended to preclude crew member lavatory inspections, which must be detailed in (O) procedures.</p>

1. PLACARD (P)

- A. Put a LAVATORY SMOKE DETECTOR INOPERATIVE placard on the affected lavatory door.

2. MAINTENANCE (M)

- A. For an inoperative Lavatory Smoke Detector, do the steps that follow:
 - (1) Make sure that the lavatory waste receptacle is empty.
 - (2) For associated lavatory(ies):
 - (a) Close and lock the lavatory door.
 - (b) Put a INOPERATIVE – DO NOT ENTER placard on the lavatory door.

3. OPERATIONS (O)

- A. For an inoperative Lavatory Smoke Detector (passengers carrying operations):
 - (1) For an inoperative forward Lavatory Smoke Detector as indicated by the INFO message 26 LAV SMOKE FAIL – FWD LAV A SMOKE DET INOP

Make sure the following INFO message is not displayed:

26 FIRE SYSTEM FAULT – CTRL UNIT CHAN A INOP
 - (2) For an inoperative aft Lavatory Smoke Detector as indicated by the INFO message 26 LAV SMOKE FAIL – AFT LAV C SMOKE DET INOP, or 26 LAV SMOKE FAIL – AFT LAV D SMOKE DET INOP, or 26 LAV SMOKE FAIL – AFT LAV E SMOKE DET INOP

Make sure the following INFO message is not displayed:

26 FIRE SYSTEM FAULT – CTRL UNIT CHAN B INOP

- (3) The cabin crew must make sure that the associated lavatory door remains closed and locked
 - (4) Make sure that the associated lavatory is used by crew members only.
 - (5) In-flight, make sure that service waste bags are not stored in the associated lavatory.
 - (6) Make sure that the associated lavatory is inspected every 30 minutes for signs of smoke.
- B. For an inoperative lavatory smoke detector (non-passenger carrying operations), do the steps that follow:
- (1) Occupants must be briefed as to which smoke detection system is inoperative.
 - (2) Cabin crew to inspect associated lavatory every 30 minutes for signs of smoke.
 - (3) Cabin crew to make sure that in-flight waste service bags are not stored in associated lavatory.

20-01	Portable Fire Extinguisher	D	–	–	<p>(M)(O) Any in excess of those required by regulations may be inoperative or missing provided:</p> <p>(a) Inoperative fire extinguisher(s) is/are removed from passenger cabin and/or flight deck and its location is placarded INOPERATIVE, or it is removed from the installed location, secured out of sight and fire extinguisher and its installed location are placarded INOPERATIVE,</p> <p>(b) Required distribution is maintained in the passenger compartment and flight deck, and</p> <p>(c) Procedures are established to alert crew members of missing portable fire extinguishers.</p>

1. PLACARD (P)

- A. Put a PORTABLE FIRE EXTINGUISHER INOPERATIVE placard on the installed location of the inoperative portable fire extinguisher.

2. MAINTENANCE (M)

- A. For an inoperative portable fire extinguisher, do the steps that follow:
 - (1) Make sure that the inoperative fire extinguisher is removed from the passenger cabin and/or flight compartment and its location is placarded INOPERATIVE, or it is removed from the installed location, secured out of sight, and the fire extinguisher and its installed location are placarded INOPERATIVE.
 - (2) Make sure that necessary distribution is kept in the passenger compartment and the flight compartment.

3. OPERATIONS (O)

- A. For an inoperative portable fire extinguisher, create procedures to alert crew members of inoperative or missing fire extinguishers

26-00	Lavatory Fire Extinguishing Systems					
	1) Lavatory used	C	-	-	(O)	For each lavatory, the lavatory fire extinguishing system may be inoperative provided lavatory smoke detection system is operative.
	2) Lavatory not used	C	-	-	(M)(O)	May be inoperative provided: <ul style="list-style-type: none"> (a) Associated lavatory is not used by passengers for any purpose, (b) Associated lavatory waste receptacle is empty, (c) Associated lavatory door is locked closed and placarded INOPERATIVE – DO NOT ENTER, (d) Associated lavatory is used only by crew members, and (e) For extended operations with passengers there are at least two serviceable lavatories on the aircraft. <p><u>NOTE:</u> Above-mentioned provisos are not intended to preclude crew member lavatory inspections, which must be detailed in (O) procedures.</p>

1. PLACARD (P)

- A. Put a LAVATORY FIRE EXTINGUISHING SYSTEM INOPERATIVE placard on the affected lavatory door and on the flight attendant station.

2. MAINTENANCE (M)

- A. For an inoperative lavatory fire extinguishing system, do the steps that follow:
 - (1) Make sure that the lavatory waste receptacle is empty,
 - (2) For associated lavatory(ies):

- (a) Close and lock the lavatory door.
- (b) Put a INOPERATIVE – DO NOT ENTER placard on the lavatory door.

3. OPERATIONS (O)

- A. For an inoperative lavatory fire extinguishing system, do the steps that follow:
 - (1) The cabin crew shall do a visual inspection of the associated lavatory, every 30 minutes, for signs of smoke
 - (2) Make sure that the associated lavatory door remains locked and is not entered, except for use or inspection by crew members.

01-05	Primary Flight Control Computer – Cut Out Switch					
1)	Primary Flight Control Computer 1 (PFCC 1) – Cut Out Switch	C	1	0	(M)	May be inoperative provided: (a) Associated PFCC 1 is deactivated, and (b) Remaining two PFCCs are operative.
2)	Primary Flight Control Computer 2 (PFCC 2) – Cut Out Switch	C	1	0	(M)	May be inoperative provided: (a) Associated PFCC 2 is deactivated, and (b) Remaining two PFCCs are operative.
3)	Primary Flight Control Computer 3 (PFCC 3) – Cut Out Switch	C	1	0	(O)	May be inoperative provided: (a) Associated PFCC 3 is deactivated, and (b) Remaining two PFCCs are operative, and (c) APU and APU Generator are operative and selected ON.

1. PLACARD (P)

- A. Put a PFCC 1 (or 2, or 3) CUTOUT SWITCH INOPERATIVE placard on the PRIM FLT CTRL panel.

2. MAINTENANCE (M)

- A. For an inoperative PFCC 1 cutout switch:

- (1) Deactivate the associated PFCC 1 (refer to BD500-A-J27-04-05-01AAA-560A-A).

NOTE: Associated INFO message 27 FLT CTRL FAULT – PFCC 1 CUTOUT SW INOP and FLT CTRL FAULT (advisory) will clear. As a result, the associated EICAS message PFCC 1 FAIL (advisory) will be posted.

- (2) Make sure that none of the EICAS/INFO messages that follow are shown for the remaining 2 PFCCs:

PFCC 2 (3) OFF (status)

PFCC 2 (3) FAIL (advisory)

27 FLT CTRL FAULT PFCC 2 (3) DEGRADED

B. For an inoperative PFCC 2 cutout switch:

- (1) Deactivate the associated PFCC 2 (refer to BD500-A-J27-04-05-02AAA-560A-A).

NOTE: Associated INFO message 27 FLT CTRL FAULT – PFCC 2 CUTOUT SW INOP and FLT CTRL FAULT (advisory) will clear. As a result, the associated EICAS message PFCC 2 FAIL (advisory) will be posted.

- (2) Make sure that none of the EICAS/INFO messages that follow are shown for the remaining 2 PFCCs:

PFCC 1 (3) OFF (status)

PFCC 1 (3) FAIL (advisory)

27 FLT CTRL FAULT PFCC 1 (3) DEGRADED

3. OPERATIONS (O)

A. For an inoperative PFCC 3 cutout switch, as indicated by the INFO message 27 FLT CTRL FAULT – PFCC 3 CUTOUT SW INOP:

- (1) On Circuit Breaker panel 1, open the circuit breaker that follows:

L-CBP-B5 (PFCC 3)

NOTE: The PFCC 3 (Advisory) message will be shown as a result. The 27 FLT CTRL FAULT – PFCC 3 CUTOUT SW INOP and FLT CTRL FAULT (Advisory) messages will clear.

- (2) Make sure that none of the messages that follow are shown:

PFCC 1 FAIL (Advisory)

PFCC 2 FAIL (Advisory)

PFCC 1 OFF (Status)

PFCC 2 OFF (Status)

27 FLT CTRL FAULT – PFCC 1 DEGRADED

27 FLT CTRL FAULT – PFCC 2 DEGRADED

- (3) Before each flight, make sure that APU and APU Generator are operative and selected ON.

** This message will be inhibited once the aircraft is Weight off Wheels (WoffW).

- (5) Make sure that the following message is not displayed after flap selection:

SLAT SLOW (advisory)

- (6) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems inoperative).

- D. For an inoperative HLSL Flap Channel 2 RVDT (A/C with SB BD500-314002 or Modsum RC500T101030), do the steps that follow:

- (1) Confirm that one of the following Onboard Maintenance System (OMS) fault messages is displayed:

SLAT FLAP SELECTOR LEVER (A296) LANE 1 RVDT FAULT / REPORTED BY SFECU2B (FLAP CHANNEL)

SLAT FLAP SELECTOR LEVER (A296) LANE 2 RVDT FAULT / REPORTED BY SFECU2B (FLAP CHANNEL)

SLAT FLAP SELECTOR LEVER (A296) INVALID POSITION REPORTED BY SFECU 2B (FLAP CHANNEL)

- (2) On Circuit Breaker Panel (CBP) 1, open the Circuit Breaker (CB) that follows:

L-CBP-C2 (FLAP CH 2)

- (3) The following CAS or INFO messages may all be displayed as a result of SFECU Flap Channel 2 deactivation:

SLAT FAULT (advisory)

FLAP FAULT (advisory)**

FLAP SLOW (advisory)*

27 SLAT FAULT – DATA CONFIG INPUT REDUND LOSS

27 FLAP FAULT – DATA CONFIG INPUT REDUND LOSS**

27 FLAP SLOW – CHAN 2 INOP*

27 FLT CTRL FAULT – PFCC INPUT REDUND LOSS

27 FLT CTRL FAULT – IIM INPUT REDUND LOSS

NOTE: * This message will only appear after at least one engine is started.

** This message will be inhibited once the aircraft is Weight off Wheels (WoffW).

- (4) Before each flight, make sure that none of the following INFO messages are displayed after an engine start:

27 FLT CTRL FAULT – PFCC INPUT REDUND LOSS

27 FLT CTRL FAULT – IIM INPUT REDUND LOSS

- (5) Make sure that the following message is not displayed after flap selection:

SLAT SLOW (advisory)

- (6) Make sure that operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems inoperative).

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
27 – <u>FLIGHT CONTROLS</u>						
61-01	Ground Spoiler (GS) System	C	1	0	(M)(O) May be inoperative provided:	<ul style="list-style-type: none"> (a) Ground Spoiler Actuators are retracted and Ground Spoiler Control Module is disabled, (b) GS lock-down mechanism is confirmed operative, (c) Inoperative ground spoiler surfaces are verified retracted prior to each flight, (d) All multifunction spoiler surfaces are operative, (e) Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), and (f) Operations with Steep Approach are not conducted.

1. PLACARD (P)

- A. Put a GROUND SPOILER SYSTEM INOPERATIVE placard on the SPOILER control panel.

2. MAINTENANCE (M)

- A. For an inoperative ground spoiler system, do the steps that follow:
 - (1) Deactivate the Ground Spoiler Control Module (GSCM) (refer to BD500-A-J27-63-01-01AAA-560A-A).
 - (2) Do the test that follows to make sure that the ground spoiler lock-down function is operational:
 - (a) Move High Lift surfaces to position 5 (in order to gain access to spoiler surfaces).
 - (b) Turn the three hydraulic systems to OFF.
 - (c) Access GS panels from below, and attempt to push panels up.
 - (d) Make sure that the GS panels do not move from the retracted position.
 - (e) Restore the aircraft to its original configuration.

3. OPERATIONS (O)

- A. For an inoperative ground spoiler system, do the steps that follow before each flight:
- (1) Apply performance penalty (take-off and landing distance) in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).
 - (2) Do a visual inspection to make sure that ground spoiler surfaces are fully retracted.

NOTE: 27 FLT CTRL FAULT – GND SPOILER INOP info message will be displayed once the system is deactivated. The message will clear at aircraft power up but will be reinstated as 27 FLT CTRL FAULT – GND SPOILER INOP if/when ground spoilers are checked (manual deployment on ground via spoiler lever command selection to FULL position).

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
27 – <u>FLIGHT CONTROLS</u>						
62-01	Multi-Function Spoiler (MFS) #1 System	A	1	0	(M)(O)	Except for extended operations, may be inoperative provided: <ul style="list-style-type: none"> (a) MFS 1 REU is deactivated, (b) Ground Spoiler System is operative, (c) Left and Right MFS 1 PCU lock-down mechanisms are confirmed operative, (d) Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative), (e) Operations with Steep Approach are not conducted. (f) Autoland Operations are not conducted. (g) Aircraft is not powered down. (h) Electronic FCS Test (PBIT) is not performed, and (i) May be inoperative for one calendar day.

1. PLACARD (P)

- A. Put a MULTI FUNCTION SPOILER #1 SYSTEM INOPERATIVE placard on the SPOILER control panel.

2. MAINTENANCE (M)

- A. For an inoperative MFS #1 system:
 - (1) Deactivate the MFS #1 (refer to BD500-A-J27-64-01-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative MFS #1 system, do the steps that follow before each flight:
 - (1) Apply performance penalty (take-off and landing distances, altitude limitation) in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative).

23-02 L AC Boost Pump	B	1	1	0	(M)(O) Except for extended operations, may be inoperative provided:	<ul style="list-style-type: none"> (a) Left AC Boost Pump is selected to AUTO before flight, (b) Left AC Boost Pump is deactivated, (c) Right AC Boost Pump is selected to AUTO before each flight, (d) Left and Right Engine Feed primary Ejector Pumps are verified operative before each flight, (e) None of the following messages is displayed: R BOOST PUMP FAIL (advisory) FUEL GRAV XFR FAIL (advisory) 28 FUEL FAULT – DEFUEL/XFR SOV INOP (info), (f) Procedures are established and used to correct aircraft lateral fuel imbalance when required, (g) APU is started before departure and operated continuously throughout the flight, (h) Both wing tanks fuel quantity of at least 5400 lbs is maintained throughout the flight, and (i) Flight is conducted at or below 22 000 ft. MSL and bulk fuel temperature at takeoff to be below 25 deg C. <p>NOTE: As long as there is fuel in the center tank throughout the flight, 5400 lbs wing tanks fuel quantity is achieved automatically.</p>

1. PLACARD (P)

- A. Put a L AC BOOST PUMP INOPERATIVE placard on the FUEL control panel.

2. MAINTENANCE (M)

A. For an inoperative Left Boost Pump, deactivate the pump as follows:

- (1) Get access to the Forward Avionics Compartment (refer to BD500-A-J52-42-00-01AAA-540A-A).
- (2) On the Electronic Power Center 3 (EPC 3), open and collar the circuit breaker that follows (refer to BD500-A-J24-00-00-04AAA-398D-A):

EPC3-F1 (L FUEL PUMP)

3. OPERATIONS (O)

A. For an inoperative Left Boost Pump, do as follows:

- (1) Before each flight, on the FUEL control panel
 - (a) Set the L BOOST PUMP switch to AUTO.
 - (b) Set the R BOOST PUMP switch to AUTO.
- (2) After engine start, do the operational test of each engine-feed primary ejector as follows:
 - (a) On the FUEL synoptic page, make sure that the icon of the engine-feed primary ejector-pump, on each side, becomes green and stays green while the applicable engine is running.
 - (b) On the EICAS, make sure that the messages that follows are not shown:

L FUEL EJECTOR FAIL (advisory)

R FUEL EJECTOR FAIL (advisory)
- (3) Before each flight, make sure that the messages that follows are not shown:

R BOOST PUMP FAIL (advisory)

FUEL GRAV XFR FAIL (advisory)

28 FUEL FAULT – DEFUEL/XFR SOV INOP (info)
- (4) Establish and use procedures to correct aircraft lateral fuel imbalance, when required.
- (5) Start and operate the APU continuously during flight.
- (6) Make sure that the quantity of fuel in both wing tanks is maintained at 5,400 lbs. throughout the flight.
- (7) Make sure that flight is conducted at or below 22,000 ft. MSL and bulk fuel temperature is below 25 degrees C during takeoff.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
28 – <u>FUEL</u>						
23-05	Defuel/Isolation Transfer Shutoff Valve (SOV)					
1)	Defuel/Isolation Transfer Shutoff Valve (SOV) secured closed	C	1	0		<p>Except for extended operations, may be inoperative provided:</p> <ul style="list-style-type: none"> (a) Affected valve is secured closed, (b) AC boost pumps are operative, and (c) Gravity transfer SOV is operative. <p><u>NOTE:</u> Manual fuel transfer function will not be available.</p>
2)	Defuel/Isolation Transfer Shutoff Valve (SOV) failed open	C	1	0	(O)	<p>Except for extended operations, may be inoperative open provided:</p> <ul style="list-style-type: none"> (a) Refuel SOVs are verified operative, (b) AC boost pumps are operative, (c) Gravity transfer SOV is operative, and (d) All fuel tank indications on EICAS are operative.
3)	Position Indication (microswitches)	C	1	0	(M)(O)	<p>May be inoperative provided:</p> <ul style="list-style-type: none"> (a) Associated valve is verified operative once each flight day, (b) All fuel tank quantity indications on EICAS are operative, and (c) Gravity transfer SOV is operative.

1. PLACARD (P)

- A. Put a DEFUEL/ISOLATION TRANSFER SHUTOFF VALVE (SOV) OR POSITION INDICATION INOPERATIVE placard on the FUEL control panel.

2. MAINTENANCE (M)

- A. For an inoperative defuel/isolation transfer SOV position indication, do the steps that follow before each flight day:
 - (1) Get access to the defuel/isolation transfer SOV and the position indicator.
 - (2) Establish communication with the flight compartment.

- (3) Make sure that the MAN XFR switch, on the FUEL control panel, is in the OFF position, and that the indicator on the valve actuator shows the CLOSED position.
- (4) Set the MAN XFR switch, on the FUEL control panel, to the L or the R position and make sure that the indicator on the valve actuator shows the OPEN position.

NOTE: For extended operations, the maintenance (M) procedure must be done before each flight.

3. OPERATIONS (O)

- A. For a fuel imbalance.

NOTE 1: Use the Gravity SOV to correct fuel imbalance.

NOTE 2: If fuel imbalance message is displayed and a boost pumps starts, the applicable boost pump should be selected off, if the fuel imbalance message continues to show.

- B. To make sure that the refuel SOVs are operative, on the FUEL control panel, do the steps that follow before each flight day:

- (1) Do a manual fuel transfer from the left wing tank to the right wing tank as follows:

- (a) Set the MAN XFR switch to the R position.
- (b) Set the L BOOST PUMP switch to ON.
- (c) Make sure that the FUEL MAN XFR FAIL caution message is not displayed.
- (d) Set the L BOOST PUMP switch to OFF.

- (2) Do a manual fuel transfer from the right wing tank to the left wing tank as follows:

- (a) Set the MAN XFR switch to the L position.
- (b) Set the R BOOST PUMP switch to ON.
- (c) Make sure that the FUEL MAN XFR FAIL caution message is not displayed.
- (d) Set R BOOST PUMP switch to OFF.

- (3) Do a manual fuel transfer from the right wing tank or the left wing tank to the center tank as follows:

- (a) Set the MAN XFR switch to the CTR position.
- (b) Set the L BOOST PUMP or the R BOOST PUMP switch to ON.
- (c) Make sure that the FUEL MAN XFR FAIL caution message is not displayed.
- (d) Set the L BOOST PUMP or the R BOOST PUMP switch to OFF.
- (e) Set the MAN XFR switch to the OFF.

- (f) Set the L BOOST PUMP and the R BOOST PUMP switch to AUTO/OFF, as applicable.
- C. For an inoperative defuel/isolation transfer SOV position indication (micro-switches), do the steps that follow during manual fuel transfer operations:
 - (1) Make sure that the wing fuel quantity indications on the EICAS fuel synoptic page are operative.
 - (2) Make sure that the fuel quantity of one wing tank increases and the fuel quantity of the other wing tank decreases.

System & Sequence N°	Item	1.	2. Number Installed		3. Number Required For Dispatch	4. Remarks or Exceptions
28 – <u>FUEL</u>						
23-20	Refuel/Defuel Adapter Cap					
1)	Right Wing Side	C	1	0	(M)	Except for extended operations, may be inoperative or missing provided there is no evidence of fuel leaking from the Refuel/Defuel adaptor while the manual fuel transfer is operated once each flight day.
2)	Left Wing Side ***	C	1	0	(M)	Except for extended operations, may be inoperative or missing provided there is no evidence of fuel leaking from the Refuel/Defuel adaptor while the manual fuel transfer is operated once each flight day.

1. PLACARD (P)

- A. Put a L and/or R REFUEL/DEFUEL ADAPTER CAP INOPERATIVE (MISSING) placard on the REFUEL / DEFUEL PANEL.

2. MAINTENANCE (M)

- A. For an inoperative or missing Refuel/Defuel Adapter Cap, once each flight day, make sure there is no evidence of fuel leaking from the affected Refuel/Defuel Adaptor as follows:

- (1) Pressurize the fuel system by doing a manual fuel transfer to the center tank.

NOTE 1: On the REFUEL / DEFUEL PANEL, make sure the ON/OFF switch is set to OFF.

NOTE 2: The REFUEL / DEFUEL PANEL door must be closed prior to manual fuel transfer.

NOTE 3: Make sure that there is a minimum of 1500 lbs. (680.39 kg) of fuel in each fuel wing tank, and make sure there is enough space in the center tank to allow fuel transfer.

- (2) Establish communication between the flight deck and the Fuel/Defuel Panel position.
- (3) On the FUEL control panel, select:
 - (a) L BOOST PUMP and R BOOST PUMP to AUTO.
 - (b) MAN XFR to CTR.

- (4) On the FUEL synoptic page, make sure that the indications below are shown:
 - (a) The left and right boost pump boxes shows green.
 - (b) The DEFUEL/ISOLATION/XFR Shut-Off Valve (SOV) is OPEN.
 - (c) The CENTER REFUEL SOV is OPEN.
- (5) On the EICAS display, make sure that FUEL MAN XFER TO CTR (status) message is shown.
- (6) Make sure that the fuel quantity increases in the center tank.
- (7) Simultaneously at the Fuel/Defuel Panel, and while the system is pressurized, make sure there is no indication of fuel leaking from the affected Refuel/Defuel adaptor.
- (8) On the FUEL control panel, select:
 - (a) MAN XFR to OFF.
 - (b) L BOOST PUMP and R BOOST PUMP to OFF.

3. OPERATIONS (O)

- A. Not required.

- A. Not required.

System & Sequence N°		Item	1.	2.	Number Installed		3. Number Required For Dispatch	
							4. Remarks or Exceptions	
28 – <u>FUEL</u>								
23-30	Refuel / Defuel Control panel							
1)	Fuel Quantity Display Indications	C	4	0	(O)		One or more may be inoperative provided: (a) Pressure Refueling System Manual Mode is operative and used, and (b) Fuel quantity for each fuel tank is verified on EICAS during refueling.	
2)	Pre Select Quantity	C	1	0	(O)		May be inoperative provided pressure refueling system manual mode is operative and used.	
3)	Auto Mode	C	1	0			May be inoperative provided pressure refueling system manual mode is operative and used.	
4)	Manual Mode	C	1	0			May be inoperative provided pressure refueling system auto mode is operative and used.	
5)	Start/Stop Selector	C	1	0			May be inoperative provided pressure refueling system manual mode is operative and used.	
6)	Manual REFUEL/DEFUEL Switch (DEFUEL Position)	C	1	0	(O)		May be inoperative provided: (a) Defuel/Isolation Transfer Shutoff Valve (SOV) is verified closed before each flight, and (b) Alternate defueling procedures are established and used.	

1. PLACARD (P)

- A. Put a REFUEL / DEFUEL PANEL (XXX) INOPERATIVE placard on the REFUEL / DEFUEL PANEL.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative REFUEL / DEFUEL PANEL fuel quantity display indications, do the steps that follow during refueling or defueling:

- (1) Monitor the EICAS or the FUEL synoptic page fuel quantity indications.
- (2) Establish direct communication between the refuel truck and the flight compartment.

- B. For an inoperative REFUEL / DEFUEL PANEL preselect quantity:

- (1) Use the manual pressure refuel method.
- (2) For aircraft equipped with the Flight Deck Virtual Refuel Panel, fuel preselection may be done from the cockpit and automatic pressure refuel may be used as follows:
 - (a) On the REFUEL / DEFUEL PANEL, set the ON/OFF switch to ON.
 - (b) On the REFUEL / DEFUEL PANEL, set the AUTO/MANUAL switch to AUTO.
 - (c) Preselect the fuel quantity from the cockpit:

1 At the bottom of the FUEL synoptic page, select CKPT on the Virtual Refuel Panel.

2 Enter the required fuel quantity in the REQUESTED field, then press ENTER.

NOTE: When the preselection of fuel is complete on the Virtual Preselect Panel, the COCKPIT message and the quantity of fuel requested are displayed alternately on the PRESEL window of the REFUEL / DEFUEL panel.

- (3) Once the preselected fuel quantity is displayed on the PRESEL window of the REFUEL / DEFUEL PANEL, continue with the normal automatic pressure refuel procedure.

- C. For an inoperative REFUEL / DEFUEL PANEL manual REFUEL/DEFUEL switch (DEFUEL position), before each flight, do the steps that follow:

- (1) Select the FUEL synoptic page.
- (2) Make sure that the Defuel/Isolation Shutoff Valve (SOV) indication shows closed.
- (3) If defueling a wing tank is necessary before a repair, do the steps that follow:
 - (a) If possible, it is recommended that you use the manual fuel transfer function to transfer the fuel from the wing tank to the center tank.
 - (b) If possible, it is recommended that you defuel the center tank through the Manual Defuel Valve (refer to BD500-A-J12-10-28-01AAA-221A-A or BD500-A-J12-10-28-02AAA-221A-A).

1. PLACARD (P)

- A. Put a FUEL QUANTITY EICAS INDICATIONS INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative EICAS fuel quantity indication in the wing tanks, do the steps that follow before each flight:

- (1) Defuel the affected tank and refuel with known quantity of fuel (refer to BD500-A-J12-10-28-01AAA-221A-A or BD500-A-J12-10-28-02AAA-221A-A and BD500-A-J12-10-28-01AAA-211A-A or BD500-A-J12-10-28-02AAA-211A-A).
- (2) During the defueling operation, make sure that low fuel indication L FUEL LO QTY caution message or R FUEL LO QTY caution message is shown for the affected wing tank when the quantity is below 975 lbs (442.25 Kg).

NOTE: Limit the amount of fuel in the affected tank to 6675 lbs (3028 Kg). The fuel computer may not stop the refueling if a high level is reached.

- B. For an inoperative EICAS fuel quantity indication in the center tank, defuel the center tank from the manual defuel valve on the center tank (refer to BD500-A-J12-10-28-01AAA-221A-A).

3. OPERATIONS (O)

- A. Fuel Log For Dispatch With One Wing Tank Quantity Inoperative Table

(1)	INITIAL FUEL LOAD											
Time in Flight		0+00	0+30	1+00	1+30	2+00	2+30	3+00	3+30	4+00	4+30	5+00
Fuel Remaining in Tanks with Operative Quantity Readouts	L											

Fuel Remaining in Tanks with Operative Quantity Readouts	R												
Fuel Remaining in Tanks with Operative Quantity Readouts	C												
(2)	TOTAL (Operative Quantity Readouts)												
(3)	TOTAL FUEL USED (from Fuel Synoptic Page)												
(4)	TOTAL FUEL ACCOUNTED FOR (Line 2+Line 3)												
	FUEL REMAINING IN AFFECTED TANK (Line 1-Line 4)												

- B. For an inoperative Wing Tank EICAS Fuel Quantity Indication, do the steps that follow:
- (1) In the event of engine failure, obey AFM fuel imbalance limitations.
 - (2) Every 30 minutes, during flight, calculate the fuel remaining in the affected tank using the flight fuel log (refer to table below).
- C. For an inoperative Center Tank EICAS Fuel Quantity Indication, before each flight, make sure the center is empty as follows:
- (1) Make sure there is no more than 5000 lbs (2268 kg) of fuel in each wing tank.

NOTE: Fuel transfer from center tank is inhibited when the fuel level in the applicable wing tank is above the fuel transfer float valve, approximately 5000 lbs (2268 kg).

CAUTION: **Maximum test duration with engines and APU operative should not exceed 10 minutes as it can cause damage to the equipment.**
 - (2) On the FUEL control panel, do the steps that follow:
 - (a) Set the L BOOST PUMP switch to ON.
 - (b) Set the R BOOST PUMP switch to ON.
 - (3) Access the FUEL synoptic page.
 - (4) Make sure that the quantity of fuel in the left wing tank and in the right wing tank does not increase.

NOTE: This procedure is not required if the center tank is defueled before the intended flight.

- (5) If necessary, complete the refueling of the wing tanks with the required fuel quantity for the intended flight.

System & Sequence N°	Item	1.	2. Number Installed		4. Remarks or Exceptions
			3.	Number Required For Dispatch	
29 – <u>HYDRAULIC POWER</u>					
11-01	Power Transfer Unit (PTU) Switch				
	1) AUTO position	C	1	0 (O)	May be inoperative provided: (a) PTU is verified operative in the ON position before each flight, and (b) PTU is selected ON before takeoff and landing.

1. PLACARD (P)

- A. Put a PTU AUTO MODE SWITCH INOPERATIVE placard on the HYDRAULIC control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative PTU switch AUTO position, do the steps that follow:

- (1) Before each flight:
 - (a) On the HYDRAULIC panel, set the PTU switch to the ON position.
 - (b) Make sure that the HYD PTU ON status message is shown.
- (2) Before takeoff, make sure that the PTU switch is set to the ON position.

NOTE: If right engine taxi is conducted, make sure that the PTU switch is set to the ON position before taxi.

- (3) After takeoff and climb, set the PTU switch to the OFF position.
- (4) Before landing, set the PTU switch to the ON position.

1. PLACARD (P)

- A. Put a HYDRAULIC SYSTEM (1) (2) (3) PRESSURE SENSOR/TRANSDUCER INOPERATIVE placard on the HYDRAULIC control panel.

2. MAINTENANCE (M)

- A. For an inoperative Hydraulic System 3 Pressure Sensor/Transducer, as indicated by the messages below:

HYDRAULIC FAULT (advisory), and 29 HYDRAULIC FAULT HYD 3 PRESS SNSR INOP (info)

- (1) Deactivate the Hydraulic System 3 Pressure Sensor/Transducer (refer to BD500-A-J29-31-01-02AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative Hydraulic System 1 Pressure Sensor/Transducer, as indicated by the messages below:

HYDRAULIC FAULT (advisory), and

29 HYDRAULIC FAULT – HYD 1 PRESS SNSR INOP (info)

- (1) Deactivate the Hydraulic System 1 Pressure Sensor/Transducer.
 - (a) On the Circuit Breaker (CB) synoptic page, set to OUT and LOCK the following circuit breaker:
 CDC1-9-18 (HYD 1 PRESS XDGR)
 - (2) Before each flight, do the following check:
 - NOTE: Engine is not operational for steps a) thru e).
 - (a) On the HYDRAULIC panel turn the PTU switch to ON.
 - (b) On the HYDRAULIC panel turn the 2B switch to ON.

- (c) Make sure the following messages are not displayed:

HYD 1 LO PRESS (caution)

29 HYDRAULIC FAULT – HYD PTU PRESS SW INOP

- (d) On the HYDRAULIC panel turn the PTU switch to OFF.

- (e) On the HYDRAULIC panel turn the 2B switch to OFF.

- (f) Start the left engine.

- (g) Make sure the following messages are not displayed:

HYD 1 LO PRESS (caution)

29 HYDRAULIC FAULT – HYD EDP 1A PRESS SW INOP

- (3) Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

- B. For an inoperative Hydraulic System 2 Pressure Sensor/Transducer, as indicated by the two messages below:

HYDRAULIC FAULT (advisory), and

29 HYDRAULIC FAULT – HYD 2 PRESS SNSR INOP (info)

- (1) Deactivate the Hydraulic System 2 Pressure Sensor/Transducer.

- (a) On the Circuit Breaker (CB) synoptic page, set to OUT and LOCK the following circuit breaker:

CDC2-10-12 (HYD 2 PRESS XDCR)

- (2) Before each flight, do the following check:

– NOTE: Engine is not operational for steps a) thru d).

- (a) Make sure right engine is not running.

- (b) On the HYDRAULIC panel turn the 2B switch to ON.

- (c) Make sure the following messages are not displayed:

HYD 2 LO PRESS (caution)

29 HYDRAULIC FAULT – HYD PUMP 2B PRESS SW INOP

- (d) On the HYDRAULIC panel turn the 2B switch to OFF.

- (e) Start the right engine.

-
- (f) Make sure the following messages are not displayed:
- HYD 2 LO PRESS (caution)
- 29 HYDRAULIC FAULT – HYD EDP 2A PRESS SW INOP
- (3) Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.
- C. For an inoperative Hydraulic System 3 Pressure Sensor/Transducer, as indicated by the two messages below:
- HYDRAULIC FAULT (advisory), and
- 29 HYDRAULIC FAULT – HYD 3 PRESS SNSR INOP (info)
- (1) Before each flight, do the following check:
- (a) On the HYDRAULIC panel turn the 3A switch to ON.
- (b) On the HYDRAULIC panel turn the 3B switch to OFF.
- (c) Make sure the following messages are not displayed:
- HYD 3 LO PRESS (caution)
- 29 HYDRAULIC FAULT – HYD PUMP 3A PRESS SW INOP
- (d) On the HYDRAULIC panel turn the 3A switch to OFF.
- (e) On the HYDRAULIC panel turn the 3B switch to ON.
- (f) Make sure the following messages are not displayed:
- HYD 3 LO PRESS (caution)
- 29 HYDRAULIC FAULT – HYD PUMP 3B PRESS SW INOP
- (2) Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

3)	Hydraulic System 3 Pressure Switches	C	2	1	(M)(O) One may be inoperative provided:	<ul style="list-style-type: none"> (a) Affected Hydraulic Pump Pressure Switch is deactivated, (b) Associated pump pressure sensor/transducer is operative, and (c) Associated hydraulic pump is verified operative before each flight.

1. PLACARD (P)

- A. Put a the applicable HYDRAULIC PUMP (1), (2), or (3) PRESSURE SWITCH INOPERATIVE placard on the HYDRAULIC control panel.

2. MAINTENANCE (M)

- A. For an inoperative hydraulic-pump pressure-switch, deactivate the affected pressure switch (refer to BD500-A-J29-35-01-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative Hydraulic System 1 Pump Pressure Switch, before each flight, do as follows:

- (1) For the Engine Driven Pump (EDP 1A) pressure switch as indicated by one of the info messages below:

29 HYDRAULIC FAULT – HYD EDP 1A PRESS SW INOP, or
29 HYDRAULIC FAULT – HYD CDC EDP 1A PRESS SW INOP

- (a) Do an operational check of the EDP 1A.

- 1 Make sure left engine is running.
- 2 On the HYDRAULIC panel, turn the PTU switch to OFF.
- 3 On the HYD synoptic page, make sure that HYD 1 pressure is between 2800 psig (19305 kPa) and 3200 psig (22063 kPa).
- 4 Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

- (2) For the Power Transfer Unit (PTU) pressure switch as indicated by the info message below:

29 HYDRAULIC FAULT – HYD PTU PRESS SW INOP

- (a) Do an operational check of the PTU.

- 1 Make sure left engine is not running.
- 2 On the HYDRAULIC panel, turn the PTU switch to ON.
- 3 On the HYDRAULIC panel, turn the 2B switch to ON.
- 4 On the HYD synoptic page, make sure that HYD 1 pressure is between 2800 psig (19305 kPa) and 3200 psig (22063 kPa).
- 5 Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

- B. For an inoperative Hydraulic System 2 Pump Pressure Switch, before each flight, do as follows:

- (1) For the Engine Driven Pump (EDP 2A) pressure switch as indicated by one of the info messages below:

29 HYDRAULIC FAULT – HYD EDP 2A PRESS SW INOP, or
29 HYDRAULIC FAULT – HYD CDC EDP 2A PRESS SW INOP

- (a) Do an operational check of the EDP 2A.
 - 1 Make sure right engine is running.
 - 2 On the HYDRAULIC panel, turn the 2B switch to OFF.
 - 3 On the HYD synoptic page, make sure that HYD 2 pressure is between 2800 psig (19305 kPa) and 3200 psig (22063 kPa).
 - 4 Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

- (2) For the AC Motor Pump (ACMP 2B) pressure switch as indicated by the info message below:

29 HYDRAULIC FAULT – HYD PUMP 2B PRESS SW INOP

- (a) Do an operational check of the hydraulic pump 2B.
 - 1 Make sure right engine is not running.
 - 2 On the HYDRAULIC panel, turn the HYD 2 switch to ON.
 - 3 On the HYD synoptic page, make sure that HYD 2 pressure is between 2800 psig (19305 kPa) and 3200 psig (22063 kPa).
 - 4 Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

- C. For an inoperative Hydraulic System 3 Pump Pressure Switch, before each flight, do as follows:

- (1) For the AC Motor Pump (ACMP 3A) pressure switch as indicated by one of the info messages below:

29 HYDRAULIC FAULT – HYD PUMP 3A PRESS SW INOP, or
29 HYDRAULIC FAULT – HYD CDC ACMP 3A PRESS SW INOP

- (a) Do an operational check of the ACMP 3A.
 - 1 On the HYDRAULIC panel, turn the 3A switch to ON.
 - 2 On the HYDRAULIC panel, turn the 3B switch to OFF.
 - 3 On the HYD synoptic page, make sure that HYD 3 pressure is between 2800 psig (19305 kPa) and 3200 psig (22063 kPa).
 - 4 Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

- (2) For the AC Motor Pump (ACMP 3B) pressure switch as indicated by one of the info messages below:

29 HYDRAULIC FAULT – HYD PUMP 3B PRESS SW INOP, or
29 HYDRAULIC FAULT – HYD CDC ACMP 3B PRESS SW INOP

- (a) Do an operational check of the ACMP 3B.
- 1 On the HYDRAULIC panel, turn the 3B switch to ON.
 - 2 On the HYDRAULIC panel, turn the 3A switch to OFF.
 - 3 On the HYD synoptic page, make sure that HYD 3 pressure is between 2800 psig (19305 kPa) and 3200 psig (22063 kPa).
 - 4 Configure hydraulic system for flight as per AFM NORMAL PROCEDURES.

THIS PAGE INTENTIONALLY LEFT BLANK

System & Sequence N°	Item	1.	2.	Number Installed	
				3.	Number Required For Dispatch
30 – <u>ICE AND RAIN PROTECTION</u>					
4. Remarks or Exceptions					
00-01	Overhead Control Panel PBA Switchlight (Light function only)				
1)	L SIDE “OFF”	C	1	0	
2)	L WSHLD “OFF”	C	1	0	
3)	R WSHLD “OFF”	C	1	0	
4)	R SIDE “OFF”	C	1	0	

1. PLACARD (P)

- A. Put a OVERHEAD CONTROL PANEL PBA SWITCHLIGHT INOPERATIVE placard on the WINDOW HEAT control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. Not required.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
30 – ICE AND RAIN PROTECTION						
11-09	Wing Anti Ice Valve (WAIV)	C	2	0	(M)(O)	Except for extended operations beyond 120 minutes, one or both may be inoperative provided: <ul style="list-style-type: none"> (a) Both WAI Pressure Sensors are verified operative before each flight, (b) Both WAI Temperature Sensors are verified operative before each flight, (c) Both Ice Detection Systems are verified operative before each flight, (d) Wing Anti Ice (WAI) System is selected OFF before each flight, (e) Affected WAIV(s) is(are) secured CLOSED, and (f) Aircraft is not operated in known or forecast icing conditions.

1. PLACARD (P)

- A. Put a LH (or RH) WING ANTI-ICE VALVE INOPERATIVE placard on the ANTI-ICE control panel.

2. MAINTENANCE (M)

- A. For an inoperative WAIV, deactivate the associated WAIV(s) in the CLOSED position (refer to BD500-A-J30-12-01-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative WAIV, do the steps that follow before each flight:

- (1) To confirm that the WAI Pressure and Temperature Sensors are operative, on the ANTI-ICE panel set the WING switch to AUTO and make sure that the messages that follow are not shown:

WING A/ICE FAIL (Caution)

30 L WING A/ICE LO HEAT – L WING A/ICE TEMP SNSR INOP (Info)

30 R WING A/ICE LO HEAT – R WING A/ICE TEMP SNSR INOP (Info)

30 WING A/ICE FAULT – L WING A/ICE PRESS SNSR INOP (Info)

30 WING A/ICE FAULT – R WING A/ICE PRESS SNSR INOP (Info)

- (2) To confirm that the two Ice Detection Systems are operative, make sure that the caution messages that follow are not shown:

L ICE DET FAIL

R ICE DET FAIL

(3) Set the WAI System to OFF.

(4) Do not operate the aircraft into known or forecast icing conditions.

NOTE 1: When the deactivation procedure is completed, the Wing Anti Ice Valve (WAIV) symbol on the AIR synoptic page may appear invalid or different from the actual valve position.

NOTE 2: The WING A/ICE OFF (Status) or WING A/ICE ON (Status) message may show.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
30 – ICE AND RAIN PROTECTION						
12-01	Wing Anti Ice Pressure Sensors	C	2	1	(M)(O)	Except for extended operations, one may be inoperative provided: <ul style="list-style-type: none"> (a) Wing Anti Ice (WAI) System is selected OFF, (b) Crossbleed Valve (CBV) is selected MAN CLSD, (c) Associated WAI Valve is secured closed, (d) Both Ice Detection Systems are operative, (e) Same side Engine Bleed Pressure Regulating Shutoff Valve (PRSOV) and Air Conditioning Pack are considered inoperative, and (f) Aircraft is not operated in known or forecast icing conditions.

1. PLACARD (P)

- A. Put a WING ANTI-ICE PRESSURE SENSORS INOPERATIVE placard on the ANTI-ICE panel.

2. MAINTENANCE (M)

- A. For an inoperative wing anti-ice pressure sensor, deactivate the associated WAI valve in the CLOSED position (refer to BD500-A-J30-12-01-01AAA-560A).

3. OPERATIONS (O)

- A. For an inoperative left side Wing Anti-Ice Pressure Sensor, before each flight do as follows:

- (1) Make sure that none of the following messages are displayed:

30 WING A/ICE FAULT – R WING A/ICE PRESS SNSR INOP

L ICE DET FAIL (caution)

R ICE DET FAIL (caution)

- (2) On the ANTI-ICE control panel, set the WING switch to OFF.
- (3) On the AIR control panel, set the XBLEED switch to MAN CLSD.
- (4) Make sure that the aircraft is not flown into known or forecast icing conditions.

- B. For an inoperative right side Wing Anti-Ice Pressure Sensor, before each flight do as follows:
- (1) Make sure that none of the following messages are displayed:
 - 30 WING A/ICE FAULT – L WING A/ICE PRESS SNSR INOP
 - L ICE DET FAIL (caution)
 - R ICE DET FAIL (caution)
 - (2) On the ANTI-ICE control panel, set the WING switch to OFF.
 - (3) On the AIR control panel, set the XBLEED switch to MAN CLSD.
 - (4) Make sure that the aircraft is not flown into known or forecast icing conditions.

System & Sequence N°	Item	1.	2.	Number Installed	
30 – <u>ICE AND RAIN PROTECTION</u>				3. Number Required For Dispatch	
21-00	Engine Cowl Anti Ice System			4. Remarks or Exceptions	
1)	AUTO Function	C	2	0	(O) One or both may be inoperative provided associated Engine Cowl Anti-Ice system is operated manually as required in flight.

1. PLACARD (P)

- A. Put a LH (or RH) ENGINE COWL ANTI-ICE SYSTEM AUTO FUNCTION INOPERATIVE placard on the ANTI-ICE control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative engine cowl anti-ice system, select Cowl Anti-Ice to ON when in icing condition per AFM.

System & Sequence N°	Item	1.	2.	Number Installed	
				3.	Number Required For Dispatch
30 – ICE AND RAIN PROTECTION					
22-01	Engine Cowl Anti-Ice Valves (CAIV) – Pressure Regulating Shutoff Valve (PRSOV)	B	4	2	(M) One per engine may be inoperative provided: (a) Affected valve(s) is secured open, and (b) Remaining outside Engine PRSOV Anti-Ice Valve is verified operative.

1. PLACARD (P)

- A. Put a LH or RH ENGINE CAIV PRSOV INOPERATIVE placard on the ANTI-ICE control panel.

2. MAINTENANCE (M)

- A. For an inoperative engine PRSOV Anti-Ice Valve, do the steps that follow to secure open the engine PRSOV anti-ice valve:
- (1) Open the right fan cowl door (refer to BD500-A-J71-11-00-00AAA-520A-A).
 - (2) Deactivate the thrust reverser for maintenance (refer to BD500-A-J78-30-00-00AAA-563A-A).
 - (3) Open the right door of the thrust reverser (refer to BD500-A-J78-30-00-00AAA-540A-A).
 - (4) Deactivate the affected engine PRSOV anti-ice valve in the OPEN position (refer to BD500-A-J30-21-01-00AAA-560A-A or BD500-A-J30-21-02-00AAA-560A-A).
 - (5) Close the right door of the thrust reverser (refer to BD500-A-J78-30-00-00AAA-740A-A).
 - (6) Reactivate the thrust reverser (refer to BD500-A-J78-30-00-00AAA-760A-A).
 - (7) Close the right fan cowl door (refer to BD500-A-J71-11-00-00AAA-720A-A).
 - (8) Do the engine Return To Service (RTS) test (refer to BD500-A-J71-00-00-00AAA-0B2A-A).
- B. For an inoperative engine PRSOV Anti-Ice Valve in the OFF position, do the steps that follow:
- (1) Deactivate the affected engine PRSOV in the OPEN position (refer to BD500-A-J30-21-01-00AAA-560A-A or BD500-A-J30-21-02-00AAA-560A-A).
 - (2) Start the affected engine (the EEC will initiate IDLE BIT checks on the valves) (refer to BD500-A-J71-00-00-00AAA-130B-A).
 - (3) If no fault message is shown on CAS and OMS, the remaining outside engine PRSOV anti-ice valve is operational.

NOTE: For a detailed procedure, refer to Thermal Anti-Ice System – Test and inspection in BD500-A-J30-21-00-01AAA-322A-A.

- C. If the engine PRSOV Anti-Ice Valve failed regulating low or high, do the steps that follow:
- (1) Make sure that the ambient temperature is no higher than 15 °C (60 °F).
 - (2) Deactivate the failed engine PRSOV in the OPEN position (refer to BD500-A-J30-21-01-00AAA-560A-A or BD500-A-J30-21-02-00AAA-560A-A).
 - (3) Do the engine operation power test (run engine to 85% of N2) (refer to BD500-A-J71-00-00-00AAA-0B2A-A).
 - (4) On the ANTI-ICE control panel, turn the L COWL and the R COWL switches to ON.
 - (5) If no fault message is shown on CAS and OMS, the remaining outside engine PRSOV is operational.

NOTE: For a detailed procedure, refer to Thermal Anti-Ice System – Test and inspection in BD500-A-J30-21-00-00AAA-322A-A.

3. OPERATIONS (O)

- A. Not required.

41-08	Windshield Heating System				
	1) Windshield Heat System	C	2	1	(M)(O) Except for extended operations, one may be inoperative provided: <ul style="list-style-type: none"> (a) Airplane is not operated in known or forecast icing conditions, (b) Affected heat controller is deactivated, (c) Approach minimums do not require its use, and (d) APPR 2 (CAT II) and Autoland Operations are not conducted.

1. PLACARD (P)

- A. Put a LH (or RH) WINDSHIELD HEATING SYSTEM INOPERATIVE placard on the WINDOW HEAT control panel.

2. MAINTENANCE (M)

- A. For an inoperative windshield heat system, deactivate the applicable heat controller (refer to BD500-A-J30-41-06-02AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative windshield heat controller:
 - (1) Avoid flights into known or forecast icing conditions.

System & Sequence N°		Item	1.	2.	Number Installed		3. Number Required For Dispatch	
							4. Remarks or Exceptions	
30 – <u>ICE AND RAIN PROTECTION</u>								
42-01	Windshield Wiper Systems	C	2	0	(O)	One or both may be inoperative provided: (a) Flight is not conducted in precipitation within five nautical miles of the airport of takeoff or intended landing, (b) Approach minimums do not require their use, and (c) APPR 2 (CAT II) and Autoland Operations are not conducted.		
1)	OFF (Park Position)							
	A) Wiper parked out of view	C	2	0		May be inoperative provided the wipers can be parked out of the pilots' view.		
	B) Wiper removed	C	2	0	(M)	One or both may be inoperative provided: (a) Affected wiper is removed, and (b) Affected wiper system is considered inoperative.		
2)	Intermittent (INT) Mode	C	2	0		One or both may be inoperative provided associated SLOW mode or associated FAST mode is operative.		
3)	SLOW Mode	C	2	0		One or both may be inoperative provided associated FAST mode is operative.		
4)	FAST Mode	C	2	0		One or both may be inoperative provided associated SLOW mode is operative.		

1. PLACARD (P)

- A. Put a LH (or RH) WINDSHIELD WIPER SYSTEM INOPERATIVE placard adjacent to the WIPER control switch.

2. MAINTENANCE (M)

- A. For an inoperative windshield wiper in the OFF (Park) position, remove the applicable windshield wiper (refer to BD500-A-J30-42-10-01AAA-520A-A).

3. OPERATIONS (O)

- A. For an inoperative windshield wiper system(s):
 - (1) Make sure that the aircraft is not operated in precipitation within 5 NM of the takeoff or intended landing airport.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
30 – <u>ICE AND RAIN PROTECTION</u>						
71-00	Drain Mast Heater Systems	C	2	1	(M)(O) May be inoperative provided:	<ul style="list-style-type: none"> (a) Water supply to the associated galley and lavatory is secured OFF, and (b) Procedures are established and used to ensure that the associated sink is not used.

1. PLACARD (P)

- A. For an inoperative forward drain mast heater,
 - (1) Put a FWD DRAIN MAST HEATER SYSTEM INOPERATIVE placard below the landing gear control panel.
 - (2) Put a DO NOT USE SINK placard on the forward galley sink.
 - (3) Put a DO NOT USE SINK placard in the forward lavatory sink.
- B. For an inoperative aft drain mast heater,
 - (1) Put an AFT DRAIN MAST HEATER SYSTEM INOPERATIVE placard below the landing gear control panel.
 - (2) Put a DO NOT USE SINK placard on the aft galley sink.
 - (3) Put a DO NOT USE SINK placard in the aft lavatory sink.

2. MAINTENANCE (M)

- A. For an inoperative forward drain mast heater, deactivate the manual Shutoff Valve (SOV) in the associated galley sink and lavatory sink (refer to BD500-A-J38-12-33-01AAA-560A-A).
- B. For an inoperative aft drain mast heater, deactivate the manual SOV in the associated galley sink and lavatory sink (refer to BD500-A-J38-12-33-04AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative drain mast heater, operator to create and follow alternative procedures to make sure that the cabin crew is advised that associated galley sink and lavatory sinks drains must not be used.

System & Sequence N°	Item	1.	2.	Number Installed		4. Remarks or Exceptions
				3.	Number Required For Dispatch	
30 – ICE AND RAIN PROTECTION						
81-01	Ice Detector Systems (IDS)					
	1) Operations conducted in icing conditions	C	2	0	(O)	One or both may be inoperative provided: (a) Wing and Cowl Anti-Ice Systems are operative, (b) Alternate procedures are established and used, and (c) Flights are conducted at or below FL350.
	2) Operations not conducted in icing conditions	C	2	0	(O)	Except for extended operations beyond 120 minutes, one or both may be inoperative provided: (a) Flight is not conducted in known or forecast icing conditions, and (b) Wing Anti Ice System is selected to OFF.

1. PLACARD (P)

- A. Put a LH (or RH, or BOTH) ICE DETECTOR SYSTEM(S) INOPERATIVE placard on the ANTI-ICE control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For one or both Ice Detectors inoperative, (with Wing and Cowl Anti-Ice Systems operative):
 - (1) During icing conditions, on the ANTI-ICE control panel, manually operate the anti-ice system as follows:
 - (a) Set the L COWL switch to ON.
 - (b) Set the WING switch to ON.
 - (c) Set the R COWL switch to ON.
 - (2) Create and obey alternative procedure to determine the conditions where the anti-ice system must be activated manually.

- (3) Use of AUTO mode is prohibited.
 - (4) Conduct operations at or below FL350.
- B. For one or both Ice Detectors inoperative (with Wing Anti-Ice System OFF):
- (1) Plan flight for operation in no known or forecast icing conditions
 - (2) Make sure Wing Anti-Ice System is selected OFF.

System & Sequence N°	Item	1.	2.	Number Installed		4. Remarks or Exceptions
				3.	Number Required For Dispatch	
31 – INDICATING/RECORDING SYSTEMS						
00-02	Reversion Switch Panel (RSP) (light function only)					
1)	DSPL TUNE INHIBIT Light Bar	C	1	0	(O)	May be inoperative provided Display Tuning Inhibit is verified operative.
2)	L CURSOR R/ INHIB Light Bars	C	2	0		One or both may be inoperative provided associated cursor inhibit function is verified operative.

1. PLACARD (P)

- A. For an inoperative DSPL TUNE INHIBIT light bar, put a DSPL TUNE INHIBIT LIGHT BAR INOPERATIVE placard on the Reversion Switch Panel (RSP).

For an inoperative L CURSOR light bar, put a L LIGHT BAR INOPERATIVE placard on the RSP.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative DSPL TUNE INHIB light bar, do the steps that follow:

- (1) On the Reversion Switch Panel (RSP), push the DSPL TUNE INHIB pushbutton.
- (2) Make sure that DSPL TUNE INHIB status message is shown on the EICAS.
- (3) On Control Tuning Panel 1 (CTP 1), make sure that radio tuning is operative as follows:
 - (a) Select a preselected frequency.
 - (b) Make sure that the selected frequency becomes active.
 - (c) Make sure that the active frequency is shown in green and remains green after three seconds.
- (4) On CTP 2, make sure that radio tuning is operative as follows:
 - (a) Select a preselected frequency.
 - (b) Make sure that the selected frequency becomes active.

- (c) Make sure that the active frequency is shown in green and remains green after three seconds.
- (5) Make sure that automation tuning function of Emergency Frequency 121.5 MHz is operative as follows:
 - (a) Turn off CTP 1 and CTP 2.
 - (b) Make sure that the left and the right VHF COM are automatically tuned to 121.5 MHz.

21-01	Clock Indications on AFD								
1)	Universal Time Coordination Display (UTC), Chronometer (CHR)	C	2	0					Aircraft clock may be inoperative provided a reliable and functioning timepiece is readily available to all flight deck crewmembers.
2)	Automatic Updated Function	C	2	0	(O)				May be inoperative provided: (a) Manual mode is operative, and (b) Alternate procedures are established and used.

1. PLACARD (P)

- A. Put the appropriate CLOCK INDICATIONS INOPERATIVE or CLOCK AUTOMATIC UPDATE INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative automatic update function of the clock indications on the Adaptive Flight Display (AFD), set the time manually as follows:

- (1) On the Control Tuning Panel (CTP), turn the BRT/OFF knob to the OFF position.
- (2) Wait a few seconds and turn the BRT/OFF knob toward the BRT position.

NOTE: This is done to reset the CTP and unlock access to the MANUAL TIME function.

- (3) On the CTP, press the TUNE/MENU button once.
- (4) Press the CLOCK Line Select Key (LSK), to bring up the CLOCK page.
- (5) If MANUAL TIME is displayed, press the upper left LSK.
- (6) Rotate the outer ring of the TUNE/DATA knob to move the focus indicator.
- (7) Rotate the inner knob to increase or decrease the time and date values.
- (8) When done, press the upper left LSK to save the new time setting.

9)	BRT/OFF Rotary Knob Dimming Function	C	2	1			One may be inoperative provided: (a) Brightness level is acceptable to affected flight crew member, (b) Affected Control Tuning Panel (CTP) and Radio Tuning System Application are operative, and (c) OFF position is verified operative.		
10)	TUNE/MENU Push Button	C	2	1					
11)	IDENT Push Button	C	2	1	(O)		May be inoperative provided IDENT is provided by other means. (Cont'd)		

System & Sequence N°	Item	1.	2. Number Installed		3. Number Required For Dispatch	4. Remarks or Exceptions
31 – <u>INDICATING/RECORDING SYSTEMS</u>						
60-00	Control Tuning Panel (CTP) (Cont'd)					
12)	"1/2" Push Button	C	2	1		
13)	TUNE/DATA Rotary knob	C	2	1	(O)	May be inoperative provided: (a) Associated CCP is operative, (b) Radio Tuning System Application (RTSA) is operative, and (c) Alternate procedures are established and used.
14)	Display Option (Bezel) Push Buttons (Line Select Keys)	C	14	7	(O)	Any button may be inoperative provided alternate procedures are established and used.

1. PLACARD (P)

- A. PUT a CONTROL TUNING PANEL (X) INOPERATIVE placard on the control tuning panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative Control Tuning Panel 1 (CTP 1), do the steps that follow:

- (1) On CTP 1, turn the OFF / BRT knob fully counterclockwise to the OFF position.

NOTE: Caution message TCAS OFF may be shown. This message will clear after takeoff.

- (2) Make sure that the reversionary tuning is operative on CTP 2 as follows:

- (a) On CTP 2, momentarily push the 1/2 pushbutton.

- Radio System 1 is shown.

- (b) On CTP 2, push the R1 Line Select key.

- Tune window moves to VHF 1 preselect frequency readout.

- (c) On CTP 2, turn the TUNE / DATA selector knob to a new preselected frequency.
 - (d) On CTP 2, push the R1 Line Select key.
 - On CTP 2 VHF 1 Radio Tuning page, the preselected frequency goes active.
 - On CTP 2 the VHF 1 active frequency is shown in green and remains green after three seconds.
- (3) Verify the pilot display tuning as follows:
- (a) Using Cursor Control Panel 1 (CCP 1) and the Multi Function Window (MFW) of Adaptive Flight Display 2 (AFD 2), select the TUNE tab through the Tune Format menu and select the VHF 1 button.
 - (b) Using CCP 1, select VHF 1 preselect frequency control field.
 - (c) Using CCP 1 DSK knob, turn the selector knob to select a new preselect frequency.
 - (d) Using CCP 1, select VHF 1 Frequency Swap Button.
 - On ADF 2 tuning MFW, VHF 1 active frequency is shown in green and remains green after three seconds.

NOTE: Subsequent failure of the remaining CTP results in the Weather Radar Range to remain locked in its last stage.

B. For an inoperative CTP 2, do the steps that follow:

- (1) On CTP 2, turn the OFF / BRT knob fully counterclockwise to the OFF position.

NOTE: Caution message TCAS OFF may be shown. This message will clear after takeoff.

(2) Make sure that the reversionary tuning is operative on CTP 1 as follows:

- (a) On CTP 1, momentarily push the 1/2 pushbutton.
 - Radio System 2 is shown.
- (b) On CTP 1, push the R1 Line Select key.
 - Tune window moves to VHF 2 preselect frequency readout.
- (c) On CTP 1, turn the TUNE / DATA selector knob to a new preselected frequency.
- (d) On CTP 1, push the R1 Line Select key.
 - On CTP 1 VHF 2 Radio Tuning page, the preselected frequency goes active.
 - On CTP 1 the VHF 2 active frequency is shown in green and remains green after three seconds.

- (3) Verify the copilot display tuning as follows:
 - (a) Using CCP 2 and the MFW of AFD 3, select the TUNE tab through the Tune Format menu and select the VHF 2 button.
 - (b) Using CCP 2, select VHF 2 preselect frequency control field.
 - (c) Using CCP 2 DSK knob, turn the selector knob to select a new preselect frequency.
 - (d) Using CCP 2, select VHF 2 Frequency Swap Button.
 - On ADF 3 tuning MFW, VHF 2 active frequency is shown in green and remains green after three seconds.

NOTE: Subsequent failure of the remaining CTP results in the Weather Radar Range to remain locked in its last stage.

- C. For inoperative CTP display access key, do the steps that follow on the onboard CCP:
 - (1) Press the MENU button.
 - (2) Select the desired format.
 - (3) The other option is moving the cursor to the respective AFD and making the selection on the page using the drop down menus.
- D. For an inoperative CTP NAV SRC pushbutton, select the desired NAV source on the AVIONIC CTP synoptic page.
- E. For an inoperative CTP BARO rotary knob, select the barometric pressure on the AVIONIC CTP synoptic page.
- F. For an inoperative CTP IDENT pushbutton, use alternative procedures that include replying to ATC (voice). Use the IDENT soft button available in the ATC/TCAS control menu on AFD.
- G. For an inoperative CTP TUNE/DATA rotary knob, alternative procedures that include the use of Radio Tuning System Application (RTSA) or Pilot Non Flying (PNF) controlling the radios.
- H. For an inoperative CTP display option (Bezel) pushbutton (Line Select Key), use the same button, on the opposite CTP, to make the applicable selection (AVIONICS CTP page or RTSA).

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions

60-30	Center Console Display Lighting Control Panel					
	1) LWR DSPL/ISI Dimming Rotary Knob	C	1	0		May be inoperative provided: (a) LWR DSPL and ISI light intensities are acceptable to flightcrew, and (b) LWR DSPL can be turned OFF.

1. PLACARD (P)

- A. Put a LWR DSPL AND ISI LIGHTING CONTROL INOPERATIVE on the center console display lighting control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. Not required.

System & Sequence N°		Item	1.	2.	Number Installed		3.	Number Required For Dispatch		4.	Remarks or Exceptions
31 – <u>INDICATING/RECORDING SYSTEMS</u>											
61-05	Cursor Control Panel (CCP)										
1)	Double Stack Knob (DSK)	C	2	1							Any or all functions of one DSK knob may be inoperative provided all functions of associated Multifunction Keyboard Panel are operative.
2)	MENU Push Button	C	2	1	(O)						One may be inoperative provided all Quick Access Keys (MAP, FMS, CNS, CHKL, SYN, DATA) are operative on the affected side CTP and MKP.
3)	DSPL SEL – UPR & LWR Push Buttons	C	4	1							May be inoperative provided one LWR Pushbutton is operative.
4)	Cursor Select Buttons										
A)	One cursor select button inoperative on each CCP	C	4	2							One may be inoperative on each CCP.
B)	Both cursor select buttons inoperative on one CCP	C	4	2							Both may be inoperative on one CCP provided associated DSK ENTER push button and associated MKP ENTER push button are operative.
5)	Trackballs	B	2	1	(O)						One may be inoperative provided: (a) All Multifunction Keyboard Panels switches are operative, and (b) Affected CCP trackball is inhibited using associated CURSOR INHIB pushbutton.

1. PLACARD (P)

- A. Put the applicable CURSOR CONTROL PANEL FUNCTION INOPERATIVE placard on the CCP.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative CCP MENU pushbutton, use the quick access keys of the Control Tuning Panel (CTP), the respective Multi Function Keyboard Panel (MKP) direct access keys, the MKP arrows, and the ENTER button to select MENU on the associated display. This will make sure that the quick access keys are operative on the affected side CTP and MKP.
- B. For an inoperative CCP trackball, inhibit the affected cursor and make sure that the CURSOR INHIB status message is shown.

2)	L & R IRS Push Button	C	2	1	(O)	One may be inoperative provided: (a) All Inertial Reference Systems (IRS) are operative, and (b) Remaining IRS Push Button is verified operative.

1. PLACARD (P)

- A. Put a REVERSION SWITCH PANEL INOPERATIVE placard on the RSP.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative RSP L & R CURSOR INHIB pushbutton, make sure that the cursor track ball on the associated Cursor Control Panel (CCP) is operative.
- B. For an inoperative RSP L & R IRS pushbutton, do the steps that follow:
 - (1) Do the manual reversion of the remaining Inertial Reference Unit (IRU).
 - (2) On the RSP, press the L or the R pushbutton multiple times to make sure that all three IRS sources can be selected.
 - (3) Select the default IRS source (IRS 1 for L PFD or IRS 2 for R PFD).

System & Sequence N°	Item	1.	2.	Number Installed		3.	Number Required For Dispatch
31 – <u>INDICATING/RECORDING SYSTEMS</u>							
61-24 Adaptative Flight Display							
4. Remarks or Exceptions							
1)	Display Unit #3 (DU3)	A	1	0	(O)	May be inoperative provided: (a) DU3 is deactivated, (b) All remaining DUs are operative, and (c) Repairs are made within one flight day.	
2)	Display Unit #4 (DU4)	A	1	0	(O)	May be inoperative provided: (a) DU4 is deactivated, and (b) All remaining DUs are operative, and (c) Repairs are made within one flight day.	
3)	Display Unit #5 (DU5)	A	1	0	(O)	May be inoperative provided: (a) DU5 is deactivated, and (b) All remaining DUs are operative, and (c) Repairs are made within three flight days.	

1. PLACARD (P)

- A. Put the appropriate DU(3)(4)(5) INOPERATIVE placard below the affected display unit.

2. OPERATIONS (O)

- A. For an inoperative DU3 (right inboard position):
- (1) On the right side of the glareshield, set the INBD dimming switch to OFF.
 - (2) On the ECB synoptic page, set to OUT and LOCK the following circuit breaker:
CDC3-6-2 (R INBD DSPL)
- B. For an inoperative DU4 (right outboard position):
- (1) On the right side of the glareshield, set the OUTBD dimming switch to OFF.

- (2) On the ECB synoptic page, set to OUT and LOCK the following circuit breaker:

CDC4-6-2 (R OUTBD DSPL)

- C. For an inoperative DU5 (center pedestal position):

- (1) On the pedestal, set the outer knob of the DSPL/LWR/ISI dimming switch to OFF.

- (2) On the ECB synoptic page, set to OUT and LOCK the following circuit breaker:

CDC4-6-6 (LWR DSPL)

00-02	External Service Control Panel PBA Switch Lights (light function only)							
	1) TOW PWR "ON"							
	A) TOW STATUS light inoperative	C	1	0	(M)	May be inoperative provided alternate procedure for towing or pushback are established and used.		
	B) TOW STATUS light operative	C	1	0	(M)	May be inoperative provided TOW STATUS "NO TOW", "TOW" Switch Light is operative.		
	2) External Service Control Panel Lights TOW STATUS "NO TOW", "TOW"	C	2	0	(M)	May be inoperative provided: (a) TOW PWR switch on external service control panel is operative, (b) Parking brake and nose wheel steering are verified to be in OFF position before towing or pushback operations, and (c) Establish and use alternate procedure for towing or pushback.		

1. PLACARD (P)

- A. For an inoperative TOW PWR "ON" (light function), put a TOW PWR "ON" (LIGHT FUNCTION ONLY) INOPERATIVE placard on the external service control panel.
- B. For an inoperative "TOW" light, put a "TOW" LIGHT INOPERATIVE placard on the external service control panel.
- C. For an inoperative "NO TOW" light, put a "NO TOW" LIGHT INOPERATIVE placard on the external service control panel.

2. MAINTENANCE (M)

- A. For an inoperative TOW PWR "ON" PBA switch light, do the steps that follow before the aircraft is towed:
 - (1) On the Electrical/Towing Service Panel, push in and hold the LAMP TEST switch.

(2) If the NO TOW/TOW and the TOW PWR “ON” lights do not illuminate, establish communication with the flight crew to make sure that the parking brake and the nose steering switch are set to the OFF position.

(3) Use an alternative procedure for towing or pushback.

B. For an inoperative TOW STATUS “NO TOW”, “TOW” light, do the steps that follow before the aircraft is towed:

(1) Make sure that the NOSE STEER PBA, on the landing gear control panel, is disengaged.

(2) Make sure that the parking brake, on the PARK BRAKE control panel, is set to OFF.

NOTE: To check the brake status, aircraft power is necessary (i.e. make sure that the brake assemblies are at running clearance.

(3) Establish and use alternative procedures for towing.

3. OPERATIONS (O)

A. Not required.

EPC1-H1 (BRK EMAC TOWING 4B)

EPC2-L12 (BRK EMAC 4B)

- NOTE: When the deactivation procedure of the associated EMAC is completed (right gear), the following message will show:

32 R BRAKE DEGRADED – R GEAR EMAC INOP

3. OPERATIONS (O)

A. For an inoperative WST channel, do as follows:

- (1) Operations are conducted in accordance with AFM Supplement 5 (Operation with Airplane Systems Inoperative),

System & Sequence N°	Item	1.	2.	Number Installed	
				3.	Number Required For Dispatch
32 – <u>LANDING GEAR</u>					
45-01	External PARK BRK Switch	D	1	0	(O) May be inoperative provided cockpit PARK BRAKE switch is operative.

1. PLACARD (P)

- A. Put a PRK BRAKE SWITCH INOPERATIVE placard on the ELECTRICAL/TOWING SERVICE PANEL.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative external PARK BRAKE switch, do the steps that follow:
 - (1) Make sure that the park brakes are available with the cockpit park brake switch.
 - (2) Establish communications with ground crew to confirm that park brake is selected ON from the switch in the cockpit, when required.

System & Sequence N°	Item	1.	2.	Number Installed	
				3.	Number Required For Dispatch
32 – <u>LANDING GEAR</u>					
46-02 Brake Temperature Monitoring System (BTMS)	C	1	0		4. Remarks or Exceptions (M)(O) May be inoperative provided: (a) Operations are conducted in accordance with AFM Supplement 5 (Operations with Airplane Systems Inoperative, and (b) Operations with Steep Approach are not conducted.

1. PLACARD (P)

- A. Put a BRAKE TEMPERATURE MONITORING SYSTEM INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative BTMS, do a general visual inspection of the visible components of the brakes.
 - (1) Make sure that there is no visible damage.
 - (2) Make sure that the Brake Temperature Sensors (BTS) and the Electric Motor Actuators (EMAs) are safely secured.
 - (3) Check the brake wear condition on each of the wear pins.

NOTE: Fully worn condition is shown when the wear pin is flush with the brake carrier plate.

3. OPERATIONS (O)

- A. For an inoperative BTMS, do as follows:
 - (1) Operations are conducted in accordance with AFM Supplement 5 (Observe AFM Maximum Permissible Quick Turn-Around Landing Weight).

NOTE: At crew change, inbound crew should leave details of landing weight and V_{app} used for next crew to calculate brake cooling times. If no data forwarded, next operating crew should assume maximum landing weight for their calculations.

49-17 Brake Temperature Sensor (BTS) Synoptic Readout Indications	C	4	0	(M)(O) One or more BTS Synoptic Readout Indications per each side may be inoperative provided: (a) Affected sensors are deactivated, and (b) Brake Temperature Monitoring System (BTMS) is considered inoperative.		

1. PLACARD (P)

- A. Put a BRAKE TEMPERATURE SENSOR SYNOPTIC READOUT INDICATION INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative Brake Temperature Sensor (BTS) Synoptic Readout Indications, as indicated by:

BRAKE FAULT (advisory)

32 BRAKE FAULT – BRAKE TEMP SENSOR INOP

- (1) Deactivate the applicable BTS (refer to BD500-A-J32-46-01-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative BTS Synoptic Readout Indications, do as follows:

- (1) Operations are conducted in accordance with AFM Supplement 5 (Observe AFM Maximum Permissible Quick Turn-Around Landing Weight).

NOTE: At crew change, inbound crew should leave details of landing weight and V_{app} used for next crew to calculate brake cooling times. If no data forwarded, next operating crew should assume maximum landing weight for their calculations.

32 – <u>LANDING GEAR</u>						
49-20	Brake Wear Monitoring System					
1)	Brake Wear Annunciation	C	4	0	(O)	May be inoperative provided alternate procedures are established and used.
2)	Brake Wear Pins					
A)	EICAS brake wear annunciation is operative	C	4	0		May be inoperative or missing provided EICAS brake wear annunciation is operative.
B)	EICAS brake wear annunciation is inoperative	C	4	0	(M)	May be inoperative or missing provided alternate procedures are established and used.

1. PLACARD (P)

- A. For an inoperative Brake Wear Annunciation, put the appropriate (LH I/B, LH O/B, RH I/B or RH O/B) BRAKE WEAR ANNUNCIATION INOPERATIVE placard below the landing gear control panel.
- B. For an inoperative or missing Brake Wear Pins put the appropriate (LH I/B, LH O/B, RH I/B or RH O/B) BRAKE WEAR PIN INOPERATIVE (MISSING) placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative or missing Brake Wear Pin in combination with an inoperative STATUS synoptic page Brake Wear Annunciation, once each flight day, do as follows:
 - (1) Do a Brake Maximum Wear – Visual Examination (Refer to BD500-A-J12-10-32-00AAA-310C-A).

3. OPERATIONS (O)

- A. For an inoperative Brake Wear Annunciation, as indicated by BRAKE FAULT (status) in combination with an amber cross symbol displayed on the BRAKE WEAR indication of the STATUS synoptic page:
 - (1) Once each flight day, do as follows:
 - (a) Make sure that the PARK BRAKE is set to ON.
 - (b) Get access to the lower section of the brake assembly.

- (c) Make sure that the Brake Wear Pin is protruding from the carrier plate.

- F. For an inoperative TAWS GPWS Windshear Mode 7, do as follows:
 - (1) With the Weather Radar Windshear Detection System (Predictive) operative:

- (a) Operator must establish alternate cockpit procedures based on the predictive windshear detection system.
- (2) Without the Weather Radar Windshear Detection System (Predictive):
 - (a) Operator must establish alternate procedures to make sure flight crew have required situational awareness at any time during flight.

System & Sequence N°	Item	1.	2. Number Installed		3. Number Required For Dispatch		4. Remarks or Exceptions
34 – <u>NAVIGATION</u>							
42-03	Overhead Control Panel PBA Switchlights (light function only)						
1)	TAWS GEAR "INHIB"	C	1	0	(O)	May be inoperative provided the TAWS GEAR "INHIB" PBA switch function is verified operative.	
2)	TAWS TERR "INHIB"	C	1	0	(O)	May be inoperative provided the TAWS TERR "INHIB" PBA switch function is verified operative.	
3)	TAWS FLAP "INHIB"	C	1	0	(O)	May be inoperative provided the TAWS FLAP "INHIB" PBA switch function is verified operative.	
4)	TAWS GS "CNCL"	C	1	0		May be inoperative.	

1. PLACARD (P)

- A. Put the applicable TAWS LIGHT FUNCTION INOPERATIVE placard on the TAWS control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative TAWS GEAR "INHIB" switchlight, do the steps that follow:
- (1) On the TAWS control panel, push in the TAWS GEAR "INHIB" PBA.
 - (2) Make sure that TAWS GEAR INHIB (status) message is shown on the EICAS.
 - (3) On the TAWS control panel, push out the TWAS GEAR "INHIB" PBA.
 - (4) Make sure that TAWS GEAR INHIB (status) message is not shown on the EICAS.
- B. For an inoperative TAWS TERR "INHIB" switchlight, do the steps that follow:
- (1) On the TAWS control panel, push in the TAWS TERR "INHIB" PBA.
 - (2) Make sure that TAWS TERR INHIB (status) message is shown on the EICAS.
 - (3) On the TAWS control panel, push out the TAWS TERR "INHIB" PBA.

- (4) Make sure that TAWS TERR INHIB (status) message is not shown on the EICAS.
- C. For an inoperative TAWS FLAP “INHIB” switchlight, do the steps that follow:
- (1) On the TAWS control panel, push in the TAWS FLAP “INHIB” PBA.
 - (2) Make sure that TAWS FLAP INHIB (status) message is shown on the EICAS.
 - (3) On the TAWS control panel, push out the TAWS FLAP “INHIB” PBA.
 - (4) Make sure that TAWS FLAP INHIB (status) message is not shown on the EICAS.

System & Sequence N°		Item	1.	2.	Number Installed		3.	Number Required For Dispatch		4.	Remarks or Exceptions	
34 – <u>NAVIGATION</u>												
43-01	Traffic Alert and Collision Avoidance System – TCAS II System	B	1	0	(O)	May be inoperative provided the system is deactivated and secured.						
1)	RA Display System(s) (Overlays on MFW and HSI) (left and right sides)											
A)	Inoperative on non-flying pilot side	C	2	1		One may be inoperative on non-flying pilot side.						
B)	One or both inoperative on any side	C	2	0		May be inoperative provided: (a) All Traffic alert display elements and voice command audio functions are operative, and (b) TA only mode is selected by the crew.						
2)	TA Display System(s) (Overlays on MFW and HSI) (left and right sides)	C	2	0		May be inoperative provided all installed RA display and audio functions are operative.						
3)	Audio Functions	B	1	0		May be inoperative provided enroute or approach procedures do not require use of TCAS.						

1. PLACARD (P)

- A. Put a TRAFFIC ALERT AND COLLISION AVOIDANCE SYSTEM INOPERATIVE placard in the flight compartment.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. Deactivate the TCAS per one of the following methods:
(1) METHOD 1

- (a) From the Radio Tuning MFW Page, select the XPDR/TCAS Control Window.
 - (b) On the XPDR/TCAS Control Window, set the mode to ALT ON.
- (2) METHOD 2
- (a) From either Control Tuning Panel (CTP), push LSK R3 to select XPDR/TCAS mode.
 - (b) Use the inner TUNE/DATA knob, rotate to set the mode to ALT ON.
- (3) METHOD 3
- (a) From either Control Tuning Panel (CTP), push LSK R3 to select XPDR/TCAS CONTROL page.
 - (b) Push LSK R1 to select MODE page.
 - (c) Push LSK R2 to select the mode to ALT ON.

System & Sequence N°		Item	1.	2.	Number Installed		3. Number Required For Dispatch

34 – <u>NAVIGATION</u>								
44-00	Radio Altimeter							
1)	Aircraft with two radio altimeters	C	2	1	(O)	May be inoperative provided: (a) None of the following messages are posted: RAD ALT 1 FAIL (advisory) if RAD ALT 2 is failed RAD ALT 2 FAIL (advisory) if RAD ALT 1 is failed AT RETARD INHIBIT (caution) 32 WOW FAULT – R GEAR WOFFW REDUND LOSS 32 WOW FAULT – L GEAR WOFFW REDUND LOSS (b) Faulty Radio Altimeter is deactivated, (c) The other Radio Altimeter is verified operative, (d) Operations do not require its use, (e) Operations with Steep Approach are not conducted, (f) APPR 2 (CAT II) and Autoland operations are not conducted, and (g) RNP AR Approach Operations are not conducted.		
2)	Aircraft with third radio altimeter ***	C	3	2	(O)	May be inoperative provided: (a) Faulty Radio Altimeter is deactivated, (b) Remaining two Radio Altimeter are verified operative, (c) Operations do not require its use, and (d) LAND 3 Operations (CAT III – fail operational) are not conducted.		

1. PLACARD (P)

- A. Put a RADIO ALTIMETER INOPERATIVE placard in the flight compartment.

2. MAINTENANCE (M)

- A. Not required,

3. OPERATIONS (O)

- A. To deactivate the faulty radio altimeter.

(1) For Radio Altimeter 1:

- (a) On Circuit Breaker Panel 2, open the circuit breaker that follows:

CBP2–A3 (RAD ALT 1)

- (b) Make sure that the message that follows is shown:

RAD ALT 1 FAIL (advisory)

- (c) Make sure that RA2 is displayed in yellow text on both PFDs.

- (d) Make sure that none of the following messages are displayed:

RAD ALT 2 FAIL (advisory)

AT RETARD INHIBIT (caution)

32 WOW FAULT – R GEAR WOFFW REDUND LOSS

32 WOW FAULT – L GEAR WOFFW REDUND LOSS

(2) For Radio Altimeter 2:

- (a) On the ECB synoptic page, set to OUT and LOCK the following circuit breaker:

CDC2–10–11 (RAD ALT 2)

- (b) Make sure that the message that follows is shown:

RAD ALT 2 FAIL (advisory)

- (c) Make sure that RA1 is displayed in yellow text on both PFDs.

- (d) Make sure that none of the following messages are displayed:

RAD ALT 1 FAIL (advisory)

AT RETARD INHIBIT (caution)

32 WOW FAULT – R GEAR WOFFW REDUND LOSS

32 WOW FAULT – L GEAR WOFFW REDUND LOSS

-
- B. For airplane equipped with three radio altimeters:
- (1) If Radio Altimeter 1 is inoperative, do the steps that follows:
 - (a) On Circuit Breaker Panel 2, open the circuit breaker that follows:

CBP2-A3 (RAD ALT 1)
 - (b) Make sure that the message that follows is shown:

RAD ALT 1 FAIL (advisory)
 - (c) Make sure that none of the following messages are shown:

RAD ALT 2 FAIL (advisory)

RAD ALT 3 FAIL (advisory)
 - (d) On the Left Primary Flight Display (PFD) make sure that RA3 is displayed in white text.
 - (2) If Radio Altimeter 2 is inoperative, do the steps that follows:
 - (a) On the ECB synoptic page, set to OUT and LOCK the following circuit breaker:

CDC2-10-11 (RAD ALT 2)
 - (b) Make sure that the message that follows is shown:

RAD ALT 2 FAIL (advisory)
 - (c) Make sure that none of the following messages are shown:

RAD ALT 1 FAIL (advisory)

RAD ALT 3 FAIL (advisory)
 - (d) On the Right Primary Flight Display (PFD) make sure that RA3 is displayed in white text.
 - (3) If Radio Altimeter 3 is inoperative, do the steps that follows:
 - (a) On the ECB synoptic page, set to OUT and LOCK the following circuit breaker:

CDC1-09-16 (RAD ALT 3)
 - (b) Make sure that the message that follows is shown:

RAD ALT 3 FAIL (advisory)
 - (c) Make sure that none of the following messages are shown:

RAD ALT 1 FAIL (advisory)
-

RAD ALT 2 FAIL (advisory)

54-00	ATC Transponder	D	2	1	(O) May be inoperative provided the other ATC Transponder is verified operative.

1. PLACARD (P)

- A. Put the applicable ATC 1(2) TRANSPONDER INOPERATIVE placard in the flight compartment.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative ATC 1 transponder.

- (1) For dispatch with XPDR 1 FAIL (caution).

- (a) On the Control Tuning Panel (CTP):

- 1 Select the XPDR/TCAS page.

- 2 Select XPDR 2.

- (b) Make sure that XPDR 1 FAIL (caution) goes out of view.

- (c) Make sure that the messages that follow are shown:

AVIONIC FAULT (advisory), and

34 AVIONIC FAULT – XPDR 1 INOP (info)

- (d) Before each flight.

- 1 Make sure that the message that follows is not shown:

34 AVIONIC FAULT – XPDR 2 INOP (info)

- 2 Make sure that there are no other pilot reported ATC transponder failures.

- (2) For dispatch without CAS indication (loss of aircraft tracking capability in controlled airspace as reported by the Air Traffic Control (ATC)).

- (a) Before each flight.

- 1 Make sure that the message that follows is not shown:

34 AVIONIC FAULT – XPDR 2 INOP (info)

- 2 Make sure that there are no other pilot reported ATC transponder failures.
- B. For an inoperative ATC 2 transponder.
- (1) For dispatch with XPDR 2 FAIL (caution).
 - (a) On the Control Tuning Panel (CTP):
 - 1 Select the XPDR/TCAS page.
 - 2 Select XPDR 1.
 - (b) Make sure that XPDR 2 FAIL (caution) goes out of view.
 - (c) Make sure that the messages that follow are shown:
 - AVIONIC FAULT (advisory), and
 - 34 AVIONIC FAULT – XPDR 2 INOP (info)
 - (d) Before each flight.
 - 1 Make sure that the message that follows is not shown:
 - 34 AVIONIC FAULT – XPDR 1 INOP (info)
 - 2 Make sure that there are no other pilot reported ATC transponder failures.
 - (2) For dispatch without CAS indication (loss of aircraft tracking capability in controlled airspace as reported by the Air Traffic Control (ATC)).
 - (a) Before each flight.
 - 1 Make sure that the message that follows is not shown:
 - 34 AVIONIC FAULT – XPDR 1 INOP (info)
 - 2 Make sure that there are no other pilot reported ATC transponder failures.

				3. Number Required For Dispatch
				4. Remarks or Exceptions
				(d) Crew oxygen EICAS pressure readout is verified operative before each flight,
				(e) Crew oxygen EICAS pressure is monitored during flight,
				(f) Crew oxygen masks are verified operative before each flight, and
				(g) Observer seat is not occupied.

1. PLACARD (P)

- A. Put an OXYGEN PRESSURE SWITCH INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative Oxygen Pressure Switch:
(dispatch without CREW OXY LO PRESS (caution) shown).
 - (1) Once prior to first flight of relief period:
 - (a) Open the enclosure of the crew oxygen cylinder.
 - (b) Make sure that the control lever of the oxygen bottle is in the OPEN position.
 - (c) Close the enclosure of the oxygen bottle.
 - (2) Before each flight:
 - (a) Open the enclosure of the crew oxygen bottle.
 - (b) Record the pressure indicated on the oxygen gauge.

NOTE: Use Table 1 below to determine the equivalent EICAS temperature compensated pressure.
 - (c) Make sure that the pressure indication on the crew oxygen bottle gauge is above the minimum pressure required for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02, OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM DISPATCH/ CONSUMPTION DATA

- (d) Close the enclosure of the crew oxygen bottle.

NOTE: During the period granted for dispatch with the degraded system, each time maintenance is accomplished in the oxygen bottle compartment area, make sure that the control lever of oxygen bottle is in the OPEN position.

- B. For an inoperative Oxygen Pressure Switch:
(dispatch with observer seat occupied and CREW OXY LO PRESS (caution) shown).

- (1) Verify by two means of indication that the crew oxygen bottle shows the same pressure value.

The EICAS Readout may be used with either Ground Service Panel Pressure Gauge or Bottle Pressure Gauge.

- (2) Verify the Bottle Pressure Gauge indication as follows:

- (a) Open the enclosure of the crew oxygen bottle.
(b) Record the pressure indicated on the oxygen gauge.

NOTE: Use Table 1 below to determine the equivalent EICAS temperature compensated pressure.

- (c) Make sure that the pressure indication on the crew oxygen bottle gauge is above the minimum pressure required for 3 crewmembers and for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02, OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM DISPATCH/ CONSUMPTION DATA

- (d) Close the enclosure of the crew oxygen bottle.

NOTE: During the period granted for dispatch with the degraded system, each time maintenance is accomplished in the oxygen cylinder compartment area, make sure that the control lever of oxygen cylinder is in the ON position.

- C. For an inoperative Oxygen Pressure Switch:
(dispatch with observer seat unoccupied and CREW OXY LO PRESS (caution) shown).

- (1) Verify by two means of indication that the crew oxygen bottle shows the same pressure value.

The EICAS Readout may be used with either Ground Service Panel Pressure Gauge or Bottle Pressure Gauge.

- (2) Verify the Bottle Pressure Gauge indication as follows:

- (a) Open the enclosure of the crew oxygen bottle.

- (b) Record the pressure indicated on the oxygen gauge.

NOTE: Use Table 1 below to determine the equivalent EICAS temperature compensated pressure.

- (c) Make sure that the pressure indication on the crew oxygen bottle gauge is above the minimum pressure required for 3 crewmembers and for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02, OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM DISPATCH/ CONSUMPTION DATA

- (d) Close the enclosure of the crew oxygen bottle.

NOTE: During the period granted for dispatch with the degraded system, each time maintenance is accomplished in the oxygen cylinder compartment area, make sure that the control lever of oxygen cylinder is in the ON position.

3. OPERATIONS (O)

- A. For an inoperative Oxygen Pressure Switch:
(dispatch without CREW OXY LO PRESS (caution) shown)
- (1) Before each flight:
 - (a) Make sure that EICAS oxygen pressure indication is above the minimum pressure required for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02, OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM DISPATCH/CONSUMPTION DATA
 - (b) Make sure that the crew oxygen masks have adequate oxygen flow.
- B. For an inoperative Oxygen Pressure Switch:
(dispatch with CREW OXY LO PRESS (caution) shown and the observer’s seat is occupied):
- (1) Make sure that the oxygen pressure is above 1300 psi.
 - (2) Before each flight:
 - (a) Make sure that the oxygen pressure is more than the minimum limits for three crewmembers for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02, OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM DISPATCH/CONSUMPTION DATA

- (b) Make sure that the oxygen masks of the flight crew have sufficient oxygen flow.

NOTE: If the observer seat is occupied for the intended flight, the observer seat mask must be verified.

- (3) During flight:

- (a) Monitor the flight crew oxygen pressure. If an oxygen leak is suspected, descend to a safe altitude.

- C. For an inoperative Oxygen Pressure Switch:
(dispatch with CREW OXY LO PRESS (caution) shown and the observer's seat is not occupied:

- (1) Before each flight:

- (a) Make sure that the oxygen pressure is more than the minimum limits for two crewmembers for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02,
OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM
DISPATCH/CONSUMPTION DATA

- (b) Make sure that the oxygen masks of the flight crew have sufficient oxygen flow.

- (2) During flight:

- (a) Monitor the flight crew oxygen pressure. If an oxygen leak is suspected, descend to a safe altitude.

11-07	Flight Deck Oxygen System										
	1) Ground Service Panel Pressure Indicator										
	A)	EICAS oxygen pressure indication operative	C	1	0						May be inoperative provided EICAS pressure indication is operative and checked before each flight.
	B)	EICAS oxygen pressure indication inoperative	C	1	0	(M)					May be inoperative provided oxygen bottle pressure gauge is operative and checked before each flight.
	2) Oxygen Bottle Pressure Gauge										
	3) EICAS Oxygen Pressure Indication										
	A)	Oxygen pressure checked from ground service panel	C	1	0	(O)					May be inoperative provided ground service panel pressure gauge is operative and checked before each flight.
	B)	Oxygen pressure checked from bottle pressure gauge	C	1	0	(M)					May be inoperative provided oxygen bottle pressure gauge is operative and checked before each flight.

1. PLACARD (P)

- A. For an inoperative Ground Service Panel pressure indicator, put a GROUND SERVICE PANEL PRESSURE INDICATOR INOPERATIVE placard in the oxygen ground service panel.
- B. For an inoperative Oxygen Bottle Pressure Gauge, put a OXYGEN BOTTLE PRESSURE GAUGE INOPERATIVE placard near the viewing window on the gauge of the oxygen bottle.
- C. For an inoperative EICAS oxygen pressure indication, put a EICAS OXYGEN PRESSURE INDICATION INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

A. For an inoperative Ground Service Panel Pressure Indicator.

(1) Before each flight:

- (a) Open the enclosure of the oxygen bottle.
- (b) Record the pressure indicated on the oxygen gauge.

NOTE: Use Table 1 below to determine the equivalent EICAS temperature compensated pressure.

- (c) Make sure that the pressure indication on the crew oxygen bottle gauge is above the minimum pressure required for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02,
OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM
DISPATCH/CONSUMPTION DATA

- (d) Close the enclosure of the oxygen bottle.

NOTE: During the period granted for dispatch with the degraded system, make sure that the control valve of the oxygen bottle is in the OPEN position, each time maintenance is done in the oxygen compartment area.

B. For an inoperative EICAS Oxygen Pressure Indication, do the steps that follow before each flight:

(1) Before each flight:

- (a) Open the enclosure of the oxygen bottle.
- (b) Record the pressure indicated on the oxygen gauge.

NOTE: Use Table 1 below to determine the equivalent EICAS temperature compensated pressure.

- (c) Make sure that the pressure indication, on the crew oxygen bottle, is above the minimum pressure required for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02,
OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM
DISPATCH/CONSUMPTION DATA

- (d) Close the enclosure of the oxygen bottle.

NOTE: During the period granted for dispatch with the degraded system, make sure that the control valve of the oxygen bottle is in the OPEN position, each time maintenance is done in the oxygen compartment area.

3. OPERATIONS (O)

A. For an inoperative EICAS Oxygen Pressure Indication.

- (1) Before each flight, make sure that crew oxygen pressure indication on the Ground Service Panel Pressure Gauge is within the acceptable range.
- (2) Use Table 1 below to determine the equivalent EICAS temperature compensated pressure.

NOTE: If the indications on the pressure gauge of the oxygen bottle are not clearly visible to the flight crew through the sight glass, the oxygen bottle enclosure must be removed by qualified personnel per the (M) procedure.

11-08	Filler Valve (Ground Service Panel)	C	1	0	(M) May be inoperative provided: (a) There is no evidence of leakage, and (b) EICAS oxygen pressure indication is operative and checked before each flight.

1. PLACARD (P)

- A. Put a GROUND SERVICE PANEL FILLER VALVE INOPERATIVE placard adjacent to the filler valve.

2. MAINTENANCE (M)

- A. For an inoperative ground service panel filler valve, do the leak test of the high pressure fill line (refer to BD500-A-J35-11-00-02AAA-364B-A).

3. OPERATIONS (O)

- A. Not required.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
35 – <u>OXYGEN</u>						
13-03	Overboard Discharge Indicator (disc)	C	1	0	(M)(O)	May be damaged or missing provided one of Ground Service Panel Pressure Indicator or Crew Oxygen Bottle Gauge is operative and checked before each flight.

1. PLACARD (P)

- A. Put a OVERBOARD DISCHARGE INDICATOR INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative overboard discharge indicator, if you cannot read the pressure quantity on the oxygen bottle through the sight glass, do the steps that follow before each flight:

- (1) Open the enclosure of the oxygen bottle.
- (2) Make sure that the pressure indication on the oxygen bottle of the crew is above the minimum pressure necessary for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02, OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM DISPATCH/CONSUMPTION DATA

- (3) Close the enclosure of the oxygen bottle.

NOTE 1: The above procedure must be done if the sight glass on the pressure gauge of the oxygen bottle does not show adequate reading and the gauge of the service panel is inoperative and cannot be used to verify the pressure on the oxygen bottle of the crew.

NOTE 2: During the period granted for dispatch with the degraded system, the control valve of the oxygen bottle must be in the OPEN position each time maintenance is accomplished in the oxygen compartment area.

- (4) Use the chart that follows to read the oxygen pressure quantity on the pressure gauge of the oxygen bottle.

FULL PRESS PSI vs AMBIENT TEMPERATURE

OXY CYC SERVICING: CHARGE CYL AT RATE NOT TO EXCEED 200 PSI/MIN TO "FULL" PRESSURE										
COCKPIT* TEMP	CELSIUS	-40	-29	-18	-7	5	16	21	27	38
	FAHRENHEIT	-40	-20	0	19	41	61	70	81	100
FULL PRESSURE	PSI	1340	1435	1530	1620	1710	1805	1850	1900	1990
*COCKPIT TEMPERATURE IS USED AS AN APPROXIMATION FOR THE OXYGEN COMPARTMENT AMBIENT TEMPERATURE										

3. OPERATIONS (O)

- A. For an inoperative overboard discharge indicator, before each flight, check ground service panel pressure gauge or oxygen bottle pressure gauge, and make sure that Crew Oxygen system pressure is above the minimum limits for the intended flight.

Refer to the Flight Crew Operating Manual Vol. 2 (FCOM2), Chapter 8-02, OPERATIONAL GUIDANCE – FLIGHT CREW OXYGEN SYSTEM DISPATCH/CONSUMPTION DATA

NOTE: If the indications on the pressures gauge of the bottle are not clearly visible to the flight crew through the sight glass, the enclosure of the oxygen bottle must be removed by qualified personnel per the (M) procedures.

21-00	Passenger Cabin Oxygen System						
1)	Operations conducted at or below FL 250	B	1	0	(O)	May be inoperative provided: <ul style="list-style-type: none"> (a) Minimum enroute altitude does not exceed 13000 ft above MSL, (b) Both air conditioning packs are operative, (c) Pressurization system is operative, (d) Operations are conducted at or below FL 250, (e) Portable oxygen units are provided for all crewmembers and 10% of passengers for half an hour (supplemental oxygen), and (f) Passengers are appropriately briefed. 	
2)	Operations conducted at or below 10000 ft	B	1	0		May be inoperative provided flight is conducted pressurized at or below 10000 ft.	
3)	Automatic deployment function inoperative	B	1	0		May be inoperative provided: <ul style="list-style-type: none"> (a) Alternate flight deck deployment system is operative, and (b) Operations are conducted at or below FL300. 	

1. PLACARD (P)

- A. For an inoperative passenger oxygen system, put a PASSENGER OXYGEN SYSTEM INOPERATIVE placard adjacent to the PAX OXY switch.
- B. For an inoperative passenger oxygen system auto deployment function, put a PASSENGER OXYGEN SYSTEM AUTO DEPLOYMENT FUNCTION INOPERATIVE placard adjacent to the PAX OXY switch.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative passenger cabin oxygen system, do the steps that follow:
- (1) Make sure that the cabin crew is briefed about the inoperative system and the requirement to brief the passengers accordingly.
 - (2) Put the portable oxygen units in locations that will permit even distribution throughout the cabin.
 - (3) Make sure that the locations where the portable oxygen units are installed are identified.
 - (4) Make sure that all flight crew members are briefed on the locations of the portable oxygen units.

				3.	Number Required For Dispatch	
36 – <u>PNEUMATIC</u>						
12-01	Engine Bleed Pressure Regulating Shutoff Valve (PRSOV) (Cont'd)					
	3) Unpressurized aircraft without passengers	B	2	0	(M)(O)	Except for extended operations, both may be inoperative provided: (a) Both valves are secured CLOSED, (b) L BLEED and R BLEED are selected OFF, (c) Flight is conducted unpressurized at or below 10000 ft MSL, (d) Airplane is not operated in known or forecast icing conditions, (e) Aircraft crews are the only occupants of the aircraft, and (f) Fuel Tank Inerting System is considered inoperative.
	4) APU bleed system continuously operated and both packs operative	C	2	0	(M)(O)	Except for extended operations, both may be inoperative provided: (a) Both valves are secured CLOSED, (b) APU Bleed System is operated during flight, (c) Both Air Conditioning Packs are operative, (d) Flight is conducted per AFM, (e) Passenger load is limited per AFM, (f) Airplane is not operated in known or forecast icing conditions, and (g) Both Avionics Bay Smoke Detectors are operative.

1. PLACARD (P)

- A. Put a L and/or R ENGINE BLEED PRSOV INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For dispatch with one inoperative engine bleed PRSOV, before first flight, deactivate the affected LH or RH PRSOV (refer to BD500–A–J36–11–01–00AAA–560A–A).
- B. For dispatch with both engine bleed PRSOV inoperative, before first flight, deactivate the LH and the RH PRSOV (refer to BD500–A–J36–11–01–00AAA–560A–A).

3. OPERATIONS (O)

- A. For an inoperative Engine Bleed PRSOV in single bleed operation with both PACKS operative, do the steps that follow before flight:
 - (1) On the AIR control panel, select the affected bleed to OFF.
 - (2) Plan flight for operation in single bleed configuration with two packs operative at or below FL310 per AFM.
 - B. For an inoperative Engine Bleed PRSOV in single bleed and single pack operation, do the steps that follow before flight:
 - (1) On the AIR control panel, select the affected L(R) BLEED to OFF.
 - (a) Make sure associated L(R) BLEED OFF (status) shows on EICAS.
 - (2) Make sure no other bleed–related messages shows on EICAS.
 - (3) Plan flight for operation in single bleed configuration with one pack operative at or below FL310 per AFM.
 - C. For two inoperative engine bleed PRSOV during unpressurized flight, do the steps that follow before flight:
 - (1) On the AIR control panel, select L BLEED or R BLEED to OFF.
 - (2) Obey unpressurized flight procedures.
 - (3) Conduct unpressurized flight at or below 10000 ft MSL.
 - (4) Avoid icing conditions.
 - D. For two inoperative engine bleed PRSOV during pressurized flight from APU Bleed, do the steps that follow before flight:
 - (1) Limit cabin occupants per AFM Limitation.
 - (2) On the AIR control panel, select L BLEED and R BLEED to OFF.
 - (3) On the ELECTRICAL control panel, select APU GEN to ON.
 - (4) On the AIR control panel, select APU BLEED to ON.
 - (5) On the AIR control panel, select L PACK and R PACK to ON.
-

System & Sequence N°		Item	1.	2.	Number Installed		3.	Number Required For Dispatch	
36 – <u>PNEUMATIC</u>								4. Remarks or Exceptions	
12-05	High Pressure Shut Off Valve (HPV)								
1)	One HPV inoperative	C	2	2	1	(M)(O)	Except for extended operations, one may be inoperative provided:		
							(a) Affected valve is secured CLOSED,		
							(b) Associated Engine Bleed System is considered inoperative. Refer to “Bleed Air Systems 1) Engine”, and		
							(c) Operations with Steep Approach are not conducted.		
2)	Both HPV inoperative	B	2	2	0	(M)(O)	Except for extended operations, may be inoperative provided:		
							(a) Both valves are secured CLOSED, and		
							(b) Both engine bleed systems are considered inoperative. Refer to “Bleed Air Systems 2) Engine”.		

1. PLACARD (P)

- A. Put a ONE and/or BOTH HIGH PRESSURE SHUTOFF VALVE INOPERATIVE placard on the AIR control panel.

2. MAINTENANCE (M)

- A. For one inoperative HPV, before first flight, deactivate the HPV in the CLOSED position (refer to BD500-A-J36-11-02-00AAA-560A-A).
- B. For two inoperative HPVs, before first flight, deactivate the LH HPV and the RH HPV in the CLOSED position (refer to BD500-A-J36-11-02-00AAA-560A-A).

3. OPERATIONS (O)

- A. For one inoperative HPV failed open, do the steps that follow before flight:
 - (1) On the AIR control panel, select the associated L (R) BLEED to OFF.
 - (2) Make sure that L (R) BLEED OFF status message shows on EICAS.
 - (3) Make sure that no other bleed-related messages show on EICAS.

- I (4) On the AIR control panel, set the XBLEED switch to MAN OPEN.
- I (5) Make sure that the XBLEED MAN OPEN status message is shown. This will confirm that the Cross Bleed Valve (CBV) is operative.
- I (6) Make sure that opposite BLEED is ON.
- I (7) On the AIR control panel, set the XBLEED switch to AUTO.
- (8) If flight includes operation in icing conditions, wing anti-ice uses opposite bleed.
- I (9) Make sure that operations with Steep Approach are not conducted.

NOTE:

- B. For two inoperative HPVs, do the steps that follow before flight:
 - (1) On the AIR control panel, select L BLEED and R BLEED to OFF,
 - (2) Make sure that L BLEED OFF and R BLEED OFF status messages show on EICAS.
 - (3) Make sure that no other bleed-related messages show on EICAS.
 - (4) Plan flight for operation in no known or forecast icing conditions.
 - (5) Obey unpressurized flight procedure.

System & Sequence N°	Item	1.	2.	Number Installed	
				3.	Number Required For Dispatch
36 – <u>PNEUMATIC</u>					
17-01	High Pressure Ground Connection (HPGC) Valve	C	1	0	(O) May be inoperative closed provided: (a) HPGC is not used, (b) Auxiliary Power Unit (APU) is operative, and (c) APU Bleed is operative.

1. PLACARD (P)

- A. Put a HIGH PRESSURE GROUND CONNECTION VALVE INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative HPGC valve , because the high pressure ground air connection cannot be used, use the Auxiliary Power Unit (APU) as air source to start the engines.

THIS PAGE INTENTIONALLY LEFT BLANK

System & Sequence N°		Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions
38 – <u>WATER/WASTE</u>							
10-01	Individual Components of Potable Water Systems	C	–	0	(M)(O)	Individual components may be inoperative provided: (a) Associated components are deactivated or isolated, and (b) Associated system components are verified not to have leaks. <u>NOTE:</u> Any portion of the system that operates normally may be used.	
1)	Water Pumps	D	2	1			
2)	Water Heaters	D	–	0			
3)	Potable Water Mixers	D	–	0	(M)	May be inoperative provided associated Water Heater is deactivated.	

1. PLACARD (P)

- A. Put the appropriate INOPERATIVE placard on the affected component.

2. MAINTENANCE (M)

- A. For an inoperative individual component of the potable water system:
 - (1) Deactivate, or isolate electrical and pressurization components of the potable water system.

NOTE: Due to the various component failure possibilities, the operator is to establish appropriate procedure to deactivate and/or isolate applicable system component(s).

- (2) Do a visual leak check of the associated system component(s).

- B. For an inoperative potable water mixer:

- (1) To prevent potential injuries due to the water being too hot, deactivate water heater in the affected lavatory (refer to BD500-A-J38-12-30-01AAA-560A-A).

3. OPERATIONS (O)

- A. For an inoperative individual component of the potable water system, do the steps that follow:
 - (1) Cabin crew must be advise of inoperative system.

- (2) Alternative procedures must be established for other means of water provision, for crew members/occupants, such as water bottles and moist towellettes.
- (3) Bottled water could be used to assist in toilet rinsing.

System & Sequence N°	Item	1.	2.	3. Number Installed	4. Number Required For Dispatch	5. Remarks or Exceptions
38 – <u>WATER/WASTE</u>						
10-02	Potable Water System	B	–	0	(M)(O)	<p>Except for extended operations. system may be inoperative provided:</p> <p>(a) Tank is drained and inspected to ensure no leakage, and</p> <p>(b) Procedures are established to deactivate applicable system components to prevent its use or servicing.</p> <p><u>NOTE 1:</u> The (O) procedure addresses other means for water provision for crew members as well as the need to advise of system status during crew changes.</p> <p><u>NOTE 2:</u> Aviation Occupational Health & Safety (AOH&S) requirements should be addressed.</p>

1. PLACARD (P)

- A. Put a POTABLE WATER SYSTEM INOPERATIVE / DO NOT SERVICE placard inside the water service panel.

Put a POTABLE WATER SYSTEM INOPERATIVE placard on the cabin Crew Terminal(s).

2. MAINTENANCE (M)

- A. For an inoperative potable water system, do the steps that follow:

(1) Drain the Potable Water System (PWS) (refer to BD500-A-J12-10-38-01AAA-226A-A).

(2) Do a visual leak check of the water tank.

(3) Deactivate the electrical and the pressurization components of the potable water system as follows:

- (a) On the Circuit Breaker (CB) synoptic page, set to OUT and LOCK the Circuit Breakers (CBs) that follow (refer to BD500-A-J24-00-00-06AAA-398D-A):

- CDC5-17-7 (WTR FILL HTR)
- CDC3-9-4 (WTR HTR LAV A)
- CDC5-18-4 (WTR HTR LAV C) ***

- CDC5-18-6 (WTR HTR LAV D) ***
- CDC5-18-5 (WTR HTR LAV E) ***
- CDC5-17-4 (WTR PUMP 1)
- CDC5-17-5 (WTR PUMP 2)
- CDC5-17-6 (WTR PUMP HTRS)
- CDC5-16-5 (WTR TANK HTR)
- CDC5-11-16 (WTR WASTE CTRL)

NOTE: *** Option not installed on all aircraft.

3. OPERATIONS (O)

A. For an inoperative potable water system, do the steps that follow:

- (1) The cabin crew must be advised of the inoperative system.
- (2) Alternative procedures for water provision for crew members/passengers, such as water bottles and moist wipes, must be established.
- (3) If necessary, use bottled water to assist in toilet rinsing.

30-01 Individual Components of Lavatory Waste Systems	C	-	-	-	4. Remarks or Exceptions (M)(O) Individual components may be inoperative provided: (a) Associated components are deactivated or isolated, and (b) Associated system components are verified not to have leaks. <u>NOTE:</u> Any portion of system that operates normally may be used.

1. PLACARD (P)

- A. Put a COMPONENT OF LAVATORY SYSTEM INOPERATIVE placard in the associated lavatory.

2. MAINTENANCE (M)

- A. For an inoperative generic component of the lavatory waste system.

- (1) Deactivate or isolate associated components.
- (2) Make sure that the associated components are not leaking.

- B. For a false wet indication of the waste tank ultrasonic point level sensor (100%).

NOTE: A false wet condition may occur when the waste tank is drained, the flush function of each toilet is inoperative and WASTE TANK FULL is indicated on the LAVATORY page of the Cabin Management System (CMS) display.

- (1) Make sure that the waste tank was drained (refer to BD500-A-J12-10-38-02AAA-228A-A).

- (2) Deactivate the ultrasonic point level sensor (100%) as follows:

- (a) On the Circuit Breaker (CB) synoptic page set to OUT and LOCK the following circuit breaker (refer to BD500-A-J24-00-00-06AAA-398D-A).

CDC5-12-12 (WASTE TNK SNSR 100)

- (3) Clear the residual memory of the waste system as follows:

- (a) On the Circuit Breaker (CB) synoptic page set to OUT the following circuit breakers (refer to BD500-A-J24-00-00-05AAA-398D-A).

CDC5-11-16 (WTR WASTE CTRLR)

CDC3-4-7 (TOILET LAV A)

CDC5-12-8 (TOILET LAV C)***

CDC5-12-9 (TOILET LAV D)***

CDC5-12-10 (TOILET LAV E)***

CDC5-12-11 (WASTE TNK SNSR 75)

NOTE: ***Option not installed on all aircraft.

(b) Wait at least 30 seconds.

(c) On the Circuit Breaker (CB) synoptic page set to IN the following circuit breakers (refer to BD500-A-J24-00-00-10AAA-398D-A).

CDC5-11-16 (WTR WASTE CTRLR)

CDC3-4-7 (TOILET LAV A)

CDC5-12-8 (TOILET LAV C)***

CDC5-12-9 (TOILET LAV D)***

CDC5-12-10 (TOILET LAV E)***

CDC5-12-11 (WASTE TNK SNSR 75)

NOTE: ***Option not installed on all aircraft.

(4) Make sure that the following Onboard Maintenance System (OMS) fault messages are displayed:

LAVATORY/WATER SYSTEM FAULT

100% ULTRASONIC POINT LEVEL SENSOR (MT79) NO CAN BUS DATA
TRANSMISSION / REPORTED BY WWSC

(5) On the Cabin Management System (CMS) display, make sure that the following message is displayed on the LAVATORY page:

LAVATORY/WATER SYSTEM FAULT

(6) Perform an operation test of the toilet flush system (refer to BD500-A-J38-30-01-02AAA-320A-A).

NOTE: With the waste tank ultrasonic point level sensor (100%) deactivated, the waste tank is reduced to 87% usable capacity. Waste tank servicing intervals to be planned accordingly.

3. OPERATIONS (O)

- A. For an inoperative component of the lavatory waste system, do the steps that follow:
- (1) Advise the cabin crew about the inoperative components.
 - (2) Do a periodical inspection of the lavatory.

System & Sequence N°	Item	1.	2.	Number Installed	3. Number Required For Dispatch	4. Remarks or Exceptions

					(a) Vacuum Generator is deactivated, and		
					(b) Lavatories are not used on the ground or at flight altitudes below 16000 feet.		
					<u>NOTE:</u> The Pilot in Command will control lavatory access via fasten seat belts until aircraft is above 16000 feet.		

1. PLACARD (P)

- A. For an inoperative lavatory waste system, put a INOPERATIVE – DO NOT ENTER placard on the affected lavatory door(s).

2. MAINTENANCE (M)

- A. For an inoperative lavatory waste system, do as follows:
 - (1) Drain the waste tank (refer to BD500-A-J12-10-38-02AAA-228A-A).
 - (2) Deactivate the manual shutoff valve of the affected toilet (refer to BD500-A-J38-12-33-01AAA-560A-A).
 - (3) Deactivate the affected toilets(s), on the Electronic Circuit Breaker (ECB) synoptic page, set to OUT and LOCK the associated circuit breaker(s) that follow(s):
 - CDC3-4-7 (TOILET LAV A)
 - CDC5-12-8 (TOILET LAV C) ***
 - CDC5-12-9 (TOILET LAV D) ***
 - CDC5-12-10 (TOILET LAV E) ***
 - NOTE: *** Option not installed on all aircraft.
 - (4) Do a visual inspection for leaks.
 - (5) Put a INOPERATIVE – DO NOT ENTER placard on the affected lavatory door(s).

- B. For an inoperative vacuum generator, on the ECB synoptic page, set to OUT and LOCK the circuit breaker that follows:

CDC1-15-1 (TOILET VAC GEN)

3. OPERATIONS (O)

- A. For an inoperative lavatory waste system, do the steps that follow:

- (1) Advise the cabin crew of the inoperative lavatory waste system.
- (2) Make sure that associated lavatory door remains closed and locked.

- B. For an inoperative vacuum generator, do as follows:

- (1) On the ground or when the aircraft is flying below 16000 ft, keep lavatory doors locked.

NOTE: Differential pressure in cabin will facilitate flushing above 16000 ft.

1. PLACARD (P)

- A. Put a CREW TERMINAL (CT) SCREEN INOPERATIVE placard near the crew terminal.

2. MAINTENANCE (M)

- A. For an inoperative CT screen Lock/Screensaver, Fasten Seat Belt, No PED, Wrench Icon Header Button, access the Onboard Maintenance System (OMS) and make sure that there are no Cabin Maintenance System (CMS) faults.
- B. For an inoperative CT screen Back, MAINT, Status Footer Button, access the OMS to make sure that there are no CMS faults.
- C. For an inoperative CT Lavatory page – Water Level Indication, do one of the steps that follow:
 - (1) Use the Onboard Maintenance System (OMS) to verify the water level as follows:
 - (2) Access to perform Line replaceable Unit (LRU)/system operation – System monitoring (refer to BD500-A-J45-45-00-03AAA-C21A-A).
 - (3) From the Multi-Function Windows (MFW), select MAINT MENU.
 - (4) From the MAINT MENU page, select Perform LRU/System Operations.
 - (5) From the Perform LRU/System Operations page, select View _> All ATAs.
 - (6) Select _> 38-00-00.

(7) Select DATA Tab > expand octal label(s) to read a required value of water quantity labels:

- Label 271 is Water level status in percentage
- Label 271 is Water level in gallons
- Label 271 is Water level in liters.

(8) If the OMS is not available, do the steps that follow:

- (a) Fill the Potable water tank to 100% capacity.
- (b) Make sure that LED adjacent to the FULL indication, on the Potable water servicing panel, comes ON.

D. For an inoperative CT Lavatory page – Waste Status Service Indication, use the waste tank service panel to make sure that the waste tank level is correct. Operator to select time interval for waste tank level check.

If necessary, service the waste tank during every station stop.

E. For an inoperative CT Lavatory page – Purge Command, drain the water tank and the supply lines during cold weather operations (refer to BD500-A-J12-10-38-01AAA-226A-A).

F. For an inoperative CT screen eLog page, operators to create alternative procedures record aircraft defects and rectification data.

3. OPERATIONS (O)

A. For an inoperative CT screen Cabin Ready Header Button, the cabin crew to use the interphone to contact the flight when the cabin crew is ready for takeoff or landing. Operator can use the chimes to communicate Cabin Ready.

B. For an inoperative CT screen Customer Service Display (CSD) page, the cabin crew must do live safety demonstrations with safety equipment (seat belt, oxygen mask, life vest, safety card etc.) and the PA system or megaphone.

C. For an inoperative CT screen Pre-Recorded Announcement Messages (PRAM) page, the cabin crew must make the appropriate announcements with the Passenger Address (PA) system or megaphone.

D. For an inoperative CT screen Galley page, the flight crew to advise the cabin crew that the cabin crew will not be able to remove power to the galley equipment from the CT galley page. If necessary, the cabin crew must advise the flight crew if galley equipment power must be removed from the Circuit Breaker (CB) page, in the flight compartment.

Alternatively, galley power can be removed by the CABIN PWR switch on the ELECTRICAL control panel, in the flight compartment.

E. For an inoperative CT screen Doors page, the cabin crew must verify the status of the mechanical flags of the doors to make sure that they are in the applicable condition for boarding, takeoff, landing, and deplaning.

- F. For an inoperative CT screen Message page, the cabin crew to coordinate with the flight crew to communicate with ground stations using alternative procedures from the flight compartment.
- G. For an inoperative CT screen eLog page, operators to create alternative procedures to record aircraft defects and rectification data.

- A. Put a SEAT POWER OUTLET INOPERATIVE placard near the Crew Terminal Screen

2. MAINTENANCE (M)

- A. For dispatch with the INFO message 24 ELECTRICAL FAULT - ISPS 1 RELAY FAIL CLSD:
 - (1) On the electronic circuit breaker synoptic page, set to OUT and LOCK the following circuit breaker (refer to BD500-A-J24-00-00-06AAA-398D-A):

CDC1-11-13 (ISPS RLY AMCU 1)
 - (2) On the Electrical Power Centre (EPC) 1 open and collar the following circuit breaker (refer to BD500-A-J24-00-00-04AAA-398D-A):

EPC1-C14 (ISPS AMCU 1)
- B. For dispatch with the INFO message 24 ELECTRICAL FAULT - ISPS 2 RELAY FAIL CLSD:
 - (1) On the electronic circuit breaker synoptic page, set to OUT and LOCK the following circuit breaker (refer to BD500-A-J24-00-00-06AAA-398D-A):

CDC2-10-9 (ISPS RLY AMCU 2)
 - (2) On the Electrical Power Centre (EPC) 2 open and collar the following circuit breaker (refer to BD500-A-J24-00-00-04AAA-398D-A):

EPC2-D1 (ISPS AMCU 2)

3. OPERATIONS (O)

- A. Not required.

NOTE: Cabin crew to be aware that associated electrical outlets to the inoperative AMCU relay(s) will be unavailable to the passengers.

47 - INERT GAS SYSTEMS						
30-00	Fuel Tank Inerting System (FTIS)					
1)	Dual Flow Shut-Off Valve (DFSOV) and Inlet Isolation Valve (IIV) closed	C	1	0	(M)(O) May be inoperative provided:	(a) System is deactivated, (b) Dual Flow Shut-Off Valve (DFSOV) is verified closed, and (c) Inlet Isolation Valve (IIV) is verified closed.
2)	Dual Flow Shut-Off Valve (DFSOV) and Temperature Isolation Valve (IIV) closed	C	1	0	(M)(O) May be inoperative provided:	(a) System is deactivated, (b) Dual Flow Shut-Off Valve (DFSOV) is verified closed, and (c) Temperature Isolation Valve (TIV) is verified closed.

1. PLACARD (P)

- A. Put a FUEL TANK INERTING SYSTEM INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative FTIS:
 - (1) For dispatch using the Dual Flow Shut-Off Valve (DFSOV) and the Inlet Isolation Valve (IIV):
 - (a) On the ECB synoptic page, set to OUT and LOCK the circuit breaker that follows:
CDC1-11-7 (FUEL INERT CTRLR)
 - (b) Make sure the DFSOV and IIV are closed as follows:
 - 1 Open access door 193BB to get access to the DFSOV and the IIV (refer to BD500-A-J52-47-03-01AAA-540A-A).
 - 2 On the DFSOV, make sure that the position indicator pins are retracted for medium flow and low flow.
 - 3 On the IIV, make sure that the visual indication shows CLOSED.
 - 4 Remove the lanyard manual locking bolt from the housing assembly and insert it in the LOCK POSITION hole.

- 5 Close access door 193BB (refer to BD500-A-J52-47-03-01AAA-740A-A).
- (2) For dispatch using the Dual Flow Shut-Off Valve (DFSOV) and the Temperature Isolation Valve (TIV) do as follows:
- (a) On the ECB synoptic page, set to OUT and LOCK the circuit breaker that follows:

CDC1-11-7 (FUEL INERT CTLR)
 - (b) Open access door 193BB to get access to the Dual Flow Shut-Off Valve (DFSOV) (refer to BD500-A-J52-47-03-01AAA-540A-A).
 - (c) On the DFSOV, make sure the position indicator pins are retracted for medium flow and low flow.
 - (d) Close access door 193BB (refer to BD500-A-J52-47-03-01AAA-740A-A).
 - (e) Open access door 193CB to get access to the Temperature Isolation Valve (TIV) (refer to BD500-A-J52-47-03-01AAA-540A-A).
 - (f) Make sure the position indicator pin on the TIV is retracted.
 - (g) Close access door 193CB (refer to BD500-A-J52-47-03-01AAA-740A-A).

3. OPERATIONS (O)

- A. For an inoperative FTIS, on the ECB synoptic page, make sure that the following circuit breaker is set to OUT and LOCK:

CDC1-11-7 (FUEL INERT CTLR)

49 – AIRBORNE AUXILIARY POWER							
91-12	APU/Generator Oil System						
	1) Filter Delta Pressure Switch (APU Generator, APU Lube)						
	A) Non-extended operations	C	2	0	(M)	Except for extended operations, may be inoperative and APU used provided:	(a) Associated filter is verified to be free of contamination, and (b) APU operates normally.
	B) Extended operations	C	2	0	(M)	May be inoperative and APU used provided:	(a) Associated filter is verified to be free of contamination prior to each flight, and (b) APU operates normally.

1. PLACARD (P)

- A. Put a APU/GENERATOR OIL SYSTEM FILTER DELTA PRESSURE SWITCH INOPERATIVE placard on the APU control panel.

2. MAINTENANCE (M)

- A. For an inoperative APU oil filter delta pressure switch (non-extended operations):
 - (1) The associated filter is to be checked for contamination once prior to first flight of relief period.
 - (2) For a failed Filter Delta Pressure Switch in the CLOSED position, deactivate the switch (refer to BD500-A-J49-91-04-01AAA-560A-A)

NOTE: A High Delta P signal from either of the oil system switches would prevent the APU from starting on the ground.

- B. For an inoperative APU oil filter delta pressure switch (extended operations):
 - (1) The associated filter is to be checked for contamination prior to each flight.

- (2) For a failed Filter Delta Pressure Switch in the CLOSED position, deactivate the switch (refer to BD500-A-J49-91-04-01AAA-560A-A)

NOTE: A High Delta P signal from either of the oil system switches would prevent the APU from starting on the ground.

3. OPERATIONS (O)

				(c) Cargo is not carried in the Forward Cargo Compartment.
				<u>NOTE:</u> For ballast purposes, use of bags (made of glass fiber or Kevlar) of sand or ingots of nonmagnetic metals (such as lead) is acceptable.

1. PLACARD (P)

- A. Put a CARGO COMPARTMENT LINING PANEL DAMAGED OR MISSING placard on the affected location.
- B. For dispatch that requires THE deactivation of the cargo fire extinguishers and cargo smoke detectors, put the appropriate placard on the CARGO FIRE PANEL:
 - (1) AFT CARGO COMPARTMENT FIREX AND SMOKE DETECTOR DEACTIVATED.
 - (2) FWD CARGO COMPARTMENT FIREX AND SMOKE DETECTOR DEACTIVATED.

2. MAINTENANCE (M)

- A. For damaged cargo compartment flat and curved floor panel assemblies, the aircraft can be dispatched if the lining panel(s) is/are one of the part numbers that follow and the damage is not through the lining panels (the damage can extend to the plies of the inboard facings of the lining panels and not to the plies of the outboard facings):

For the A220-100 aft cargo compartment:

D761140, D761141, D761142, D761143, D761144, D761145, D761146, D761147, D761157, D761158, D761159, D761160, D761161, D761164, D761168, D761169, and D761170.

For the A220-300 aft cargo compartment:

D761140, D761141, D761142, D761143, D761144, D761145, D761146, D761147, D761157, D761158, D761159, D761160, D761161, D761164, D761168, D761169, D761170, D765118, D765120, and D755122.

For the A220-100 forward cargo compartment:

D761106, D761107, D761108, D761109, D761110, D761111, D761123, D761124, D761125, and D761126.

For the A220-300 forward cargo compartment:

D761106, D761107, D761108, D761109, D761110, D761111, D761123, D761124, D761125, D761126, D765105, D765108, and D765110

- (1) Once prior to the first flight of relief period, do a check of the cargo-compartment lining panels as follows:
 - (a) Get access to the associated cargo compartment.
 - (b) Make sure that the damage on the panel does not extend to the plies of the outboard facings.
- B. For a damaged or missing bulkhead, ceiling, sidewall aft cargo-compartment lining-panel assemblies, the aircraft can be dispatched if the lining panel(s) is/are one of the part numbers that follow:

For the A220-100 aft cargo compartment:

D761120, D761121, D761133, D761134, D761135, D761136, D761137, D761138, D761139, D761148, D761149, D761150, D761151, D761152, D761153, D761154, D761155, D761156, D761162, D761163, D761166, and D761167.

For the A220-300 aft cargo compartment:

D761120, D761121, D761133, D761134, D761135, D761136, D761137, D761138, D761139, D761148, D761149, D761150, D761151, D761152, D761153, D761154, D761155, D761156, D761162, D761163, D761166, D761167, D765116, D765117, D765123, D765124, and D765132.

- C. For damaged or missing bulkhead, ceiling, sidewall aft cargo-compartment lining-panel assemblies, cover the four smoke detectors with metallic tape to deactivate the aft cargo smoke-detection system.
- D. For a damaged or missing bulkhead, ceiling, sidewall forward cargo-compartment lining-panel assemblies, the aircraft can be dispatched if the lining panel(s) is/are one of the part numbers that follow:

For the A220-100 forward cargo compartment:

D761101, D761102, D761103, D761104, D761105, D761112, D761113, D761114, D761115, D761116, D761117, D761118, D761119, D761120, D761121, and D761122.

For the A220-300 forward cargo compartment:

D761101, D761102, D761103, D761104, D761105, D761112, D761113, D761114, D761115, D761116, D761117, D761118, D761119, D761120, D761121, D761122, D765101, D765102, D765111, D765112, and D765114.

- E. For a damaged or missing bulkhead, ceiling, sidewall forward cargo-compartment lining-panel assemblies, cover the four smoke detectors with metallic tape to deactivate the forward cargo smoke-detection system.

3. OPERATIONS (O)

- A. For damaged flat and curved floor panel assemblies, create procedures for removal, installation and security of ballast, if necessary.
- B. For damaged or missing bulkhead, ceiling, sidewall aft cargo-compartment lining-panel assemblies, do the steps that follow:

- (1) On the Electronic Circuit Breaker (ECB) synoptic page set to OUT and LOCK the circuit breakers that follow:

CDC1-08-04 (AFT BTL A HRD) to deactivate the aft cargo-compartment High-Rate Discharge (HRD) fire extinguisher Bottle A

CDC1-08-05 (AFT BTL A LRD 1) to deactivate the aft cargo-compartment Low-Rate Discharge 1 (LRD 1) fire extinguisher Bottle A

CDC1-08-06 (AFT BTL A LRD 2) to deactivate the aft cargo-compartment Low-Rate Discharge 2 (LRD 2) fire extinguisher Bottle A (if installed)

CDC2-08-07 (AFT BTL B HRD) to deactivate the aft cargo-compartment High-Rate Discharge (HRD) fire extinguisher Bottle B

CDC2-08-08 (AFT BTL B LRD 1) to deactivate the aft cargo-compartment Low-Rate Discharge 1 (LRD 1) fire extinguisher Bottle B

CDC2-08-09 (AFT BTL B LRD 2) to deactivate the aft cargo-compartment Low-Rate Discharge 2 (LRD 2) fire extinguisher Bottle B (if installed)

- (2) Make sure that the messages that follow are shown:

AFT CARGO BTL FAIL (Caution)

26 FIRE SYSTEM FAULT – AFT CARGO BTL SQUIB REDUND LOSS (Info)

- (3) Create procedures for removal/installation of cargo and security of ballast, if necessary.

-
- C. For damaged or missing bulkhead, ceiling, sidewall forward cargo-compartment lining-panel assemblies, do the steps that follow:
- (1) On the Electronic Circuit Breaker (ECB) synoptic page set to OUT and LOCK the circuit breakers that follow:
 - CDC1-08-07 (FWD BTL A HRD) to deactivate the forward cargo-compartment High-Rate Discharge (HRD) fire extinguisher Bottle A
 - CDC1-08-08 (FWD BTL A LRD 1) to deactivate the forward cargo-compartment Low-Rate Discharge 1 (LRD 1) fire extinguisher Bottle A
 - CDC1-08-09 (FWD BTL A LRD 2) to deactivate the forward cargo-compartment Low-Rate Discharge 2 (LRD 2) fire extinguisher Bottle A (if installed)
 - CDC2-08-10 (FWD BTL B HRD) to deactivate the forward cargo-compartment High-Rate Discharge (HRD) fire extinguisher Bottle B
 - CDC2-08-11 (FWD BTL B LRD 1) to deactivate the forward cargo-compartment Low-Rate Discharge 1 (LRD 1) fire extinguisher Bottle B
 - CDC2-08-12 (FWD BTL B LRD 2) to deactivate the forward cargo-compartment Low-Rate Discharge 2 (LRD 2) fire extinguisher Bottle B (if installed)
 - (2) Make sure that the messages that follow are shown:
 - FWD CARGO BTL FAIL (Caution)
 - 26 FIRE SYSTEM FAULT – FWD CARGO BTL SQUIB REDUND LOSS (Info)
 - (3) Create procedures for removal/installation of cargo and security of ballast, if necessary.

						Number Required For Dispatch	Remarks or Exceptions
50 – <u>CARGO EQUIPMENT</u>							
22-01	Cargo Nets						
	1) Door Net (including associated equipment)						
	A) Cargo compartment empty	C	2	0			One or both may be inoperative or missing provided associated cargo compartment remains empty. <u>NOTE:</u> Associated equipment includes snap latches, restraint net brackets and floor pan fitting rings/posts.
	B) Cargo compartment in use	C	2	0	(M)		One or both may be inoperative or missing provided cargo is secured in associated cargo compartment. <u>NOTE:</u> Associated equipment includes snap latches, restraint net brackets and floor pan fitting rings/posts.
	2) Load Dividing Nets (including associated equipment)	D	-	-	(M)		May be inoperative or missing provided acceptable cargo loading limits from Aircraft Mass and Balance publication are observed. <u>NOTE:</u> Associated equipment includes quick release attachments, anchor plates, net posts, narrow hooks, floor pan fitting rings/post and cam buckles.

1. PLACARD (P)

- A. Put a CARGO DOOR NET/CARGO LOAD DIVIDING NET INOPERATIVE/MISSING placard in the cargo compartment.

2. MAINTENANCE (M)

- A. For a missing or inoperative cargo door net, operator must create procedures to make sure that cargo, in the cargo compartment, is properly attached in accordance with the Weight and Balance Manual (WBM).
- B. For a missing or inoperative cargo load dividing net, operator must create procedures to make sure that acceptable cargo loading limits are obeyed in accordance with the Weight and Balance Manual (WBM).

3. OPERATIONS (O)

- A. Not required.

52 – <u>DOORS</u>						
11-00	Emergency Exits (Aircraft Crew Only)	A	-	-	(M)(O)	<p>One emergency exit may be inoperative for three flight days provided:</p> <ul style="list-style-type: none"> (a) Only the aircraft crew are carried, (b) Affected emergency exit is verified closed, latched and locked prior to each flight, (c) Aircraft crew are advised of the nature (emergency exit and slide availability) and extent of the unserviceability and that evacuation procedures do not include affected exit, though opposite exit may be used, (d) A conspicuous sign or placard indicating that the exit is inoperative is attached to the exit, and (e) Emergency exit signs and lights associated only with the inoperative exit are obscured (NOTE 3). <p><u>NOTE 1:</u> For the purpose of this item, “aircraft crew” includes the operating crew members including the flight crew members, flight attendants, aircraft maintenance personnel and supervisory crew members.</p> <p><u>NOTE 2:</u> The operator’s MEL must state the maximum number of aircraft crew permitted.</p> <p><u>NOTE 3:</u> Exit locator signs and emergency aisle path markings which are shared between two exits must not be obscured.</p>

1. PLACARD (P)

- A. Put a EMERGENCY EXIT INOPERATIVE placard in clear view on the applicable exit.

NOTE: The placard must not obscure the emergency exit window.

2. MAINTENANCE (M)

- A. For an inoperative emergency exit, do the steps that follow:
- (1) Attach a visible EXIT INOPERATIVE sign or placard on the inoperative exit.
 - (2) Cover the exit signs and the lights associated with the inoperative exit.
 - (3) Do not cover exit locator signs and emergency aisle path markings that are shared between two exits.

3. OPERATIONS (O)

- A. For an inoperative emergency exit, do the steps that follow:
- (1) Before each flight, make sure that the inoperative exit is closed, latched, and locked.
 - (2) Advise the aircraft crew of the nature (emergency exit and slide availability) and extent of the unserviceability, and that evacuation procedures do not include affected exit, though opposite exit can be used.

1)	Pressure Bottle	A	4	3	(M)(O) May be inoperative for three flight days provided associated exit is considered inoperative.
2)	Dampening Function	D	4	0	

1. PLACARD (P)

- A. For an inoperative Emergency Opening Assist Mean (EOAM) pressure bottle:
 - (1) Put an EXIT INOPERATIVE placard on the affected door.
- B. For an inoperative Dampening Function of the Emergency Opening Assist Mean (EOAM):
 - (1) Put a DOOR DAMPENING FUNCTION INOPERATIVE / OPERATE SLOWLY placard on the affected door.

2. MAINTENANCE (M)

- A. For an inoperative EOAM pressure bottle, do the steps that follow:
 - (1) Attach a visible EXIT INOPERATIVE placard on the inoperative exit.
 - (2) Cover the exit signs and the lights associated with the inoperative exit.
 - (3) Do not cover exit locator signs and emergency aisle path markings that are shared between two exits.

3. OPERATIONS (O)

- A. For an inoperative EOAM pressure bottle, do the steps that follow:
 - (1) Before each flight, make sure that the inoperative exit is closed, latched, and locked.
 - (2) Advise the aircraft crew of the nature (emergency exit and slide availability) and extent of the unserviceability, and that evacuation procedures do not include affected exit, though opposite exit can be used.

1. PLACARD (P)

- A. Put a CARGO COMPARTMENT DOOR ACTUATOR INOPERATIVE placard on the cargo compartment door.

2. MAINTENANCE (M)

- A. For an inoperative cargo-compartment door actuator (manually operated), do the steps that follow:
- (1) Open and close the cargo door, manually (refer to BD500-A-J52-30-00-02AAA-540A-A).
 - (2) Make sure the associated cargo compartment is closed, latched, and locked prior to each flight.
 - (3) Install placard near to (or over) the associated cargo door handle to notify ground personnel about the door condition and the need to take special precaution when opening the door with the actuator inoperative.
- B. For an inoperative cargo-compartment door actuator (actuator removed), do the steps that follow:
- (1) Remove the cargo-compartment door actuator (refer to BD500-A-J52-30-13-01AAA-520A-A)
 - (2) Use alternate procedures to open and close the cargo door as per AMP utilizing dedicated Ground Support Equipment (GSE) tool.
 - (3) Make sure the associated cargo compartment is closed, latched, and locked prior to each flight.
 - (4) Install placard near to (or over) the associated cargo door handle to notify ground personnel about the door condition and the need to take special precaution when opening the door with the actuator removed.

3. OPERATIONS (O)

- A. Not required.

51-01	Enhanced Flight Deck Security Door						
1)	Primary Locking System (FDRAS)	C	1	0	(O)	May be inoperative provided: <ul style="list-style-type: none"> (a) Primary Locking System (FDRAS) is deactivated, (b) Secondary locking system operates normally and is used to lock the door, and (c) Alternate procedures are established and used for locking and unlocking the door using the secondary locking system. 	
2)	Secondary Locking System (Door Manual Latch)	C	1	0		May be inoperative provided Primary Locking System (FDRAS) operates normally.	

1. PLACARD (P)

- A. Put a FLIGHT DECK SECURITY DOOR INOPERATIVE placard on the flight deck door.

2. MAINTENANCE (M)

- A. Not required.

3. OPERATIONS (O)

- A. For an inoperative flight deck security door primary locking system FDRAS,:
 - (1) Deactivate the FDRAS, as follows:
 - (a) Get access to the Electronic Door Control Module (EDCM), in the flight compartment.
 - (b) Locate LOCK SYSTEM push button on the EDCM.
 - (c) Push the EDCM LOCK SYSTEM push button and hold it for 2 seconds.
 - (d) Verify if CKPT DOOR LOCK OFF (status) message is displayed.
 - (2) Make sure that the mechanical deadbolt operates normally.
 - (3) The flight crew and the cabin crew must agree to use alternative procedures to request access to the flight compartment, when necessary.

79 – <u>OIL</u>					
21-06	Engine Oil Filter Element	A	2	1	4. Remarks or Exceptions (M)(O) Except for extended operations, one may be partially contaminated with oil quality degraded provided: <ul style="list-style-type: none"> (a) Both engines are verified to operate normally before each flight, (b) Opposite engine Oil Debris Monitor (ODM) is verified operative before each flight, (c) Opposite engine oil filter element is verified not indicating contaminated before each flight, (d) Opposite engine Oil Filter Delta Pressure Sensor (OFDPS) is verified operative before each flight, (e) Opposite engine oil quality is verified not degraded before each flight, (f) Affected engine ODM is verified operative before each flight, (g) Affected engine magnetic chip collectors are verified within acceptable limits for fine surface contamination, (h) Affected oil filter contamination area is verified within acceptable limits, and (i) Repairs are made within 10 flight hours or 5 flight cycles whichever is less.

1. PLACARD (P)

- A. Put a ENGINE OIL AND FILTER ELEMENT DEGRADED placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For dispatch with one engine oil filter element partially contaminated (as indicated by 79 L(R) ENGINE FAULT – OIL FILTER IMPENDING BYPASS), in conjunction with same side oil quality degraded (as indicated by 79 L(R) ENGINE FAULT – OIL DEBRIS ABOVE LIMIT), once prior to dispatch period, do as follows:

- (1) On the affected engine, for each of the 6 magnetic chip collectors, remove the probe from the collector valve (refer to BD500-A-J79-22-01-00AAA-520A-A).
 - (a) Make sure that each chip collector is within acceptable limits for contamination.

NOTE: Dispatch is allowed if the quantity of fine particles covers less than 25% of each probe surface.

- (2) For each of the 6 magnetic chip collectors, reinstall the probe in the collector valve (refer to BD500-AJ79-22-01-00AAA-720A-A).
- (3) Remove the main oil filter element of the affected engine (refer to BD500-A-J79-21-06-00AAA-920A-A).
 - (a) Make sure it is within acceptable limits for oil contamination.

NOTE: Dispatch is allowed if the contamination area on the main oil filter element is less than a 0.50 in. (12.70 mm) diameter circle.

- (4) Reinstall the main oil filter element of the affected engine (refer to BD500-A-J79-21-06-00AAA-920A-A).

3. OPERATIONS (O)

- A. For dispatch with one engine oil filter element partially contaminated in conjunction with same side oil quality degraded do as follows:

- (1) For the LEFT engine (as indicated by 79 L ENGINE FAULT – OIL FILTER IMPENDING BYPASS in conjunction with 79 L ENGINE FAULT – OIL DEBRIS ABOVE LIMIT), before each flight,

- (a) Make sure that none of the following messages are displayed:

ENG VIBRATION (caution)

79 R ENGINE FAULT – OIL DEBRIS MON INOP

79 R ENGINE FAULT – OIL FILTER SNSR INOP

79 R ENGINE FAULT – OIL FILTER IMPENDING BYPASS

79 R ENGINE FAULT – OIL DEBRIS ABOVE LIMIT

79 L ENGINE FAULT – OIL DEBRIS MON INOP

- (2) For the RIGHT engine (as indicated by 79 R ENGINE FAULT – OIL FILTER IMPENDING BYPASS in conjunction with 79 R ENGINE FAULT – OIL DEBRIS ABOVE LIMIT), before each flight,

- (a) Make sure that none of the following messages are displayed:

ENG VIBRATION (caution)

79 L ENGINE FAULT – OIL DEBRIS MON INOP

79 L ENGINE FAULT – OIL FILTER SNSR INOP

79 L ENGINE FAULT – OIL FILTER IMPENDING BYPASS

			1.	2.		
80 – <u>STARTING</u>						
10-01	Starter Air Valve	C	2	1	(M)(O) One may be inoperative CLOSED provided:	<ul style="list-style-type: none"> (a) Alternate starting procedures are established and used, (b) Associated valve is manually closed after engine start, and (c) Associated engine Air Turbine Starter (ATS), for in flight relights, is considered inoperative.

1. PLACARD (P)

- A. Put a STARTER AIR VALVE INOPERATIVE placard below the landing gear control panel.

2. MAINTENANCE (M)

- A. For an inoperative Starter Air Valve:

- (1) Make sure the affected engine has been shut down (cold soaked) for at least 8 hours.
- (2) Gain access to the Starter Air Valve (SAV) external manual override drive socket which is accessible from the left side of the engine without opening any engine nacelle doors.
- (3) Ground coordinator to be in constant voice and visual contact with the cockpit.
- (4) In coordination with the flight crew, manually drive the SAV open to initiate normal engine start.
- (5) In coordination with the flight crew, the SAV to be manually closed following engine start.

NOTE: After three (3) start attempts, or after four (4) minutes of continuous cranking, a 30 minutes cool down period is required.

3. OPERATIONS (O)

WARNING: Unless alternative procedure are established and used (to protect maintenance crew from being located between two running engines), cross bleed to the Right Hand Engine (RHE) is prohibited. Use APU or Ground Cart as source of bleed.

- A. For an inoperative Starter Air Valve, on ground do as follows:

- (1) Monitor EGT for indication of a hot start (Max EGT during start = 1054°C).
- (2) Monitor N2 for indication of a hung start.
- (3) Make sure indicated speed does not exceed 20%.

- (4) Make sure EGT is below 250°C.
- (5) Make sure the associated engine RUN switch is selected to OFF.
- (6) In coordination with a ground coordinator instruct maintenance to manually drive the Starter Air Valve (SAV) open to initiate normal engine start.
- (7) Once N2 reaches 17%, set the Engine RUN switch to ON.

NOTE: The fuel system is turned on by FADEC.

- (8) Verify on EICAS that N1, N2, EGT, oil pressure and fuel flow indications follow a normal start procedure.
 - (9) If a hot or hung start is indicated, immediately select the associated engine RUN switch to OFF.
 - (10) Following a hot or hung start, the affected engine to be cold soaked prior any subsequent engine re-starts attempts.
 - (11) In coordination with the ground coordinator, at 50–55% N2, instruct maintenance crew to manually close the SAV.
- B. For a subsequent In Flight Shutdown (IFSD) of the affected engine, perform windmill relight procedures in accordance with AFM procedures.

System & Sequence N°	Item	1.	2. Number Installed		3. Number Required For Dispatch	4. Remarks or Exceptions

ENG BLEED MISCONFIG (caution)

XBLEED FAIL (caution)

(3) Make sure that no live animals or temperature sensitive cargo are transported in the forward cargo compartment.

NOTE: The cabin may take longer to warm up.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL21-00-017-03 AIR SYSTEM FAULT (ADVISORY) 21 AIR SYSTEM FAULT – TRIM AIR PRV FAIL CLSD	C	(O) May be displayed provided: (a) Affected valve is deactivated, (b) None of the following messages are displayed: 21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL CLSD 21 AIR SYSTEM FAULT – TRIM AIR SOV FAIL OPEN, and (c) Left pack is operative.

1. OPERATIONS (O)

A. Do the steps that follow before each flight:

- (1) On the Electronic Circuit Breaker (ECB) synoptic page, set to OUT and LOCK the circuit breaker that follows:
 - CDC1-5-14 (TRIM AIR PRV)
- (2) Make sure that no Trim Air Shutoff Valve (TASOV) info messages show on the INFO page.
- (3) Make sure that Left Pack is selected ON.

NOTE 1: Cabin can take longer to warm up.

NOTE 2: Trim Air System may be noisy.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL21-00-021-01 AIR SYSTEM FAULT (ADVISORY) 21 AIR SYSTEM FAULT – ZONE TEMP SNSR INOP	C	(O) May be displayed provided: (a) TRIM AIR FAIL caution message is not displayed, (b) 21 AIR SYSTEM FAULT – DUCT TEMP SNSR INOP info message is not displayed, and (c) Associated COCKPIT/CABIN Temperature Control Knob is operative.

1. OPERATIONS (O)

A. Before each flight, make sure that:

- (1) TRIM AIR FAIL (Caution) message is not shown.
- (2) 21 AIR SYSTEM FAULT – DUCT TEMP SNSR INOP info message is not shown, and
- (3) The related COCKPIT AIR or CABIN AIR temperature control knob, on the AIR control panel, is operative.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL21-00-025-01 AUTO PRESS FAIL (CAUTION)	C	(O) May be displayed provided: <ul style="list-style-type: none"> (a) Affected modes are deactivated, (b) Pressurization is operated in manual control mode, (c) Autopilot is operative, (d) Flight is conducted in dual bleed and dual pack, and (e) Minimum enroute altitude does not exceed 10000 ft above MSL.

1. OPERATIONS (O)

A. Before each flight, do the steps that follow:

- (1) On the PRESSURIZATION control panel, make sure that the AUTO PRESS pushbutton is set to MAN.
- (2) Make sure that CABIN PRESS MAN status message is shown on the EICAS.
- (3) Deactivate the Outflow Valve automatic mode:
 - (a) On the Electronic Circuit Breaker (ECB) synoptic page, set to OUT and LOCK the circuit breakers that follows:
 - CDC1-6-9 (OUTFLOW VLV AUTO 1)
 - CDC2-5-9 (OUTFLOW VLV AUTO 2)
- (4) Follow the AFM, NON-NORMAL PROCEDURES for AUTO PRESS FAIL (Caution) for manual control of the pressurization.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL21-00-027-01 EQUIP BAY COOL FAULT (ADVISORY) 21 EQUIP BAY COOL FAULT – AVIO TEMP SNSR REDUND LOSS	D	May be displayed.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL23-00-017-01 AVIONIC FAULT (ADVISORY) 23 AVIONIC FAULT – RIU CH 1B INOP	C	(O) May be displayed provided: <ul style="list-style-type: none"> (a) None of the following messages are displayed: <ul style="list-style-type: none"> R CTP TUNING FAIL (caution) 23 AVIONIC FAULT – RIU CH 1A INOP 23 AVIONIC FAULT – RIU CH 2A INOP 23 AVIONIC FAULT – RIU CH 2B INOP DMC 1A FAIL (advisory) DMC 2A FAIL (advisory) (b) Reversionary tuning is confirmed operative on right Control Tuning Panel (CTP), (c) Radio Tuning System Application (RTSA) is verified operative, and (d) VHF NAV 2 is verified operative.

1. OPERATIONS (O)

A. Turn off the left CTP as follows:

- (1) On the CTP 1, turn the OFF/BRT knob fully counterclockwise.
 - CTP 1 turns off.

B. Make sure that the reversionary tuning function is operative on the right Control Tuning Panel (CTP). Do the steps that follow:

- (1) On the CTP 2, momentarily push the 1/2 pushbutton.
 - On the CTP 2, Radio System 1 is shown.
- (2) On the CTP 2, push the R1 Line Select Key.
 - The tune window moves to the VHF 1 preselect frequency readout
- (3) Turn the CTP 2 TUNE / DATA knob to a new preselectt frequency.
- (4) On the CTP 2, push the R1 Line Select Key.
 - On the CTP 2 VHF 1 Radio Tuning page, the new preselect frequency goes active.
 - On the CTP 2, the VHF 1 active frequency is shown green and remains green after 3 seconds.

C. Make sure that the pilot Radio Tuning System Application (RTSA) is operative. Do the steps that follow:

- (1) On the CCP 1 and AFD 2 MFW, select the TUNE tab from the Tune Format menu and select the VHF 1 button..

- (2) On the CCP 1, select the VHF 1 preselect frequency control field.
- (3) Turn the CCP 1 DSK selector knob to select a new preselect frequency.
- (4) On the CCP 1, select the VHF 1 Frequency Swap button.
 - On the AFD 2 tuning MFW, the VHF 1 active frequency is shown green and remains green after 3 seconds.

D. Make sure that the VHF NAV 2 is operative. Do the steps that follow:

- (1) On the R CTP, push the R2 Line Select Key.
 - The tune window moves to the NAV 2 preselect frequency readout
- (2) Turn the R CTP TUNE / DATA knob until the preselect frequency shows 108.00 MHz.
- (3) On the R CTP, push the R2 Line Select Key.
 - On the R CTP, NAV 2 Radio Tuning page, the new preselect frequency goes active.
 - On the R CTP, the NAV 2 active frequency 108.00 MHz is shown green and remains green after 3 seconds.

NOTE: Subsequent failure of the remaining CTP results in the Weather Radar Range to remain locked in it's last range.

MMEL24-00-015-03 ELECTRICAL FAULT (ADVISORY) 24 ELECTRICAL FAULT – BPCU 2 DEGRADED	C	(O) Except for extended operations, may be displayed.

1. OPERATIONS (O)

- A. Once prior to first flight of relief period, do the steps that follows to make sure that APU start is operative:
- (1) If 24 ELECTRICAL FAULT – BPCU 2 DEGRADED info message is shown, it is possible that APU start cannot be accomplished using aircraft batteries.
 - (2) Attempt APU start using aircraft batteries.
 - (a) If successful, this means that the 24 ELECTRICAL FAULT – BPCU 2 DEGRADED message was not caused by a BATT2 HES power supply fault.

Aircraft dispatch is permitted.

No further action is required.
 - (b) If not successful, this means that the 24 ELECTRICAL FAULT – BPCU 2 DEGRADED message was caused by a BATT2 HES power supply fault and external power will be required to start the APU on ground.

APU is considered inoperative for dispatch.

APU operation on ground using external power is permitted.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL24-00-015-04 ELECTRICAL FAULT (ADVISORY) 24 ELECTRICAL FAULT – BPCU 2 DEGRADED	C	(O) May be displayed provided APU start is verified operative once each flight day.

1. OPERATIONS (O)

A. Once each flight day, do the steps that follows to make sure that APU start is operative:

(1) If 24 ELECTRICAL FAULT – BPCU 2 DEGRADED info message is shown, it is possible that APU start cannot be accomplished using aircraft batteries.

(2) Attempt APU start using aircraft batteries.

(a) If successful, this means that the 24 ELECTRICAL FAULT – BPCU 2 DEGRADED message was not caused by a BATT2 HES power supply fault.

Aircraft dispatch is permitted.

No further action is required.

(b) If not successful, this means that the 24 ELECTRICAL FAULT – BPCU 2 DEGRADED message was caused by a BATT2 HES power supply fault and external power will be required to start the APU on ground.

APU is considered inoperative for dispatch.

APU operation on ground using external power is permitted.

MMEL27-00-138-01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – R TOGA SW INOP	B	(O) May be displayed provided: (a) 27 FLT CTRL FAULT – L TOGA SW INOP is not displayed, (b) Alternate procedures are established and used, and (c) Operations with Steep Approach are not conducted.

1. OPERATIONS (O)

- A. Before each flight, make sure that the following message is not displayed:
 - 27 FLT CTRL FAULT – L TOGA SW INOP
- B. Alternate procedures are established and used.

For a subsequent in-flight failure of the remaining Thrust Lever TOGA switch during a Go-Around, do as follows:

- (1) Fly the aircraft manually to applicable pitch attitude (See AFM Supplement for Operations with Airplane Systems Inoperative).

NOTE 1: Refer to the FCOM for Windshear Escape Procedures that is not based on the use of TOGA switches.

NOTE 2: After a manual Go-Around, the FMS will not automatically sequence waypoints and flightcrew must sequence the waypoint manually.

NOTE 3: After a manual Go-Around, the AT will not automatically be selected ON and commanding GA thrust.

NOTE 4: After a manual Go-Around, flightcrew will have to manually change from ILS to FMS navigation if in ILS.

- C. Make sure that operations with Steep Approach are not conducted.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL27-00-139-01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – R TOGA SW INOP	C	(O) May be displayed provided: (a) 27 FLT CTRL FAULT – L TOGA SW INOP is not displayed, (b) Alternate procedures are established and used, (c) Autopilot and Flight Director are not used below: <u>1</u> 2,000 feet AGL on ILS approaches; or <u>2</u> 500 feet AGL or MDA whichever is higher on all other approaches, and (d) Operations with Steep Approach are not conducted.

1. OPERATIONS (O)

- A. Before each flight, make sure that the following message is not displayed:
 - 27 FLT CTRL FAULT – L TOGA SW INOP
- B. Alternate procedures are established and used.

For a subsequent in-flight failure of the remaining Thrust Lever TOGA switch during a Go-Around, do as follows:

- (1) Fly the aircraft manually to applicable pitch attitude (See AFM Supplement for Operations with Airplane Systems Inoperative).

NOTE 1: Refer to the FCOM for Windshear Escape Procedures that is not based on the use of TOGA switches.

NOTE 2: After a manual Go-Around, the FMS will not automatically sequence waypoints and flightcrew must sequence the waypoint manually.

NOTE 3: After a manual Go-Around, the AT will not automatically be selected ON and commanding GA thrust.

NOTE 4: After a manual Go-Around, flightcrew will have to manually change from ILS to FMS navigation if in ILS.

- C. Make sure that Autopilot and Flight Director are not used below:
 - (1) 2,000 feet AGL on ILS approaches: or
 - (2) 500 feet AGL or MDA whichever is higher on all other approaches.
- D. Make sure that operations with Steep Approach are not conducted.

CAS Message Indication	1.	2. Remarks and Exceptions

MMEL27-00-157-01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – PFCC FADEC INPUT REDUND LOSS	C	(O) May be displayed provided none of the following messages are displayed: AUTO BRAKE FAIL (caution) NORMAL BRAKE FAIL (caution) 32 BRAKE FAULT – BDCU 1 NORM INOP 32 BRAKE FAULT – BDCU 2 NORM INOP

1. OPERATIONS (O)

A. Before each flight, make sure that none of the following messages are displayed.

AUTO BRAKE FAIL (caution)

NORMAL BRAKE FAIL (caution)

32 BRAKE FAULT – BDCU 1 NORM INOP (info)

32 BRAKE FAULT – BDCU 2 NORM INOP (info)

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL27-00-159-01 FLT CTRL FAULT (ADVISORY) 27 FLT CTRL FAULT – AFCU SFECU INPUT REDUND LOSS	C	May be displayed.

1. OPERATIONS (O)

A. Not required.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL27–00–201–01 FLAP FAULT (ADVISORY) 27 FLAP FAULT – ALTN SWITCH REDUND LOSS	C	(O) May be displayed provided Slat/Flap Alternate Switch is verified operative before the first flight of each flight day.

1. OPERATIONS (O)

A. Before the first flight of each day, do the steps that follow:

- (1) Make sure that hydraulic systems 1, 2 and 3 are pressurized.
- (2) On the center pedestal, set the ALTN FLAP switch to the DPLY position.
 - (a) Make sure the high lift system achieved its commanded position (position 3 as indicated on the EICAS SLAT / FLAP position indicator).
 - (b) Make sure that the ALTN FLAP DPLY (status) message is shown on EICAS.
- (3) Move the SLAT/FLAP lever to position 3.
 - (a) Make sure there is no slats and flaps movement.
- (4) On the center pedestal, set the ALTN FLAP switch to the NORM position.
 - (a) Make sure there is no slats and flaps movement.
 - (b) Make sure that the ALTN FLAP DPLY (status) message is not shown.
- (5) Move the SLAT/FLAP lever to position 0.
 - (a) Make sure the slats and flaps are fully retracted.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL27-00-203-01 FLAP FAULT (ADVISORY) 27 FLAP FAULT – DATA CONFIG INPUT REDUND LOSS	C	May be displayed.

1. OPERATIONS (O)

- A. Not required.

CAS Message Indication	1. 2. Remarks and Exceptions
MMEL27-00-205-01 FLAP FAULT (ADVISORY) 27 FLAP FAULT – LEVER SNSR REDUND LOSS	Item deleted at Issue 003.

CDC3-4-11 (TPMU)

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL32-00-043-01 BRAKE FAULT (ADVISORY) 32 BRAKE FAULT – BDCU 1 ALTN INOP	C	(O) May be displayed provided the following info messages are not displayed: 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – R CO-PILOT PEDAL SENSOR REDUND LOSS

1. OPERATIONS (O)

- A. Before each flight, make sure that both the alternate and normal functions of the Brake Data Concentrator Unit are available to the Pilot and Copilot through the LH & RH brake pedal inputs:
- (1) Set the PARK BRAKE switch to the OFF position.
 - (2) On the landing gear control panel, select the ALTN BRAKE switch to the ON position.
 - (3) Press and release the Pilot and Copilot LH & RH brake pedals.
 - (4) Make sure that the following INFO messages are not displayed:
 - 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
 - 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
 - 32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS
 - 32 BRAKE FAULT – R CO-PILOT PEDAL SENSOR REDUND LOSS
 - (5) On the landing gear control panel, select the ALTN BRAKE switch to the off position (Normal Braking Mode).
 - (6) Press and release the Pilot and Copilot LH & RH brake pedals.
 - (7) Make sure that the following INFO messages are not displayed:
 - 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
 - 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
 - 32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS
 - 32 BRAKE FAULT – R CO-PILOT PEDAL SENSOR REDUND LOSS
 - (8) Set the PARK BRAKE switch to the ON position.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL32-00-045-01 BRAKE FAULT (ADVISORY) 32 BRAKE FAULT – BDCU 2 ALTN INOP	C	(O) May be displayed provided the following info messages are not displayed: 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – R CO-PILOT PEDAL SENSOR REDUND LOSS

1. OPERATIONS (O)

- A. Before each flight, make sure that both the alternate and normal functions of the Brake Data Concentrator Unit are available to the Pilot and Copilot through the LH & RH brake pedal inputs:
- (1) Set the PARK BRAKE switch to the OFF position.
 - (2) On the landing gear control panel, select the ALTN BRAKE switch to the ON position.
 - (3) Press and release the Pilot and Copilot LH & RH brake pedals.
 - (4) Make sure that the following INFO messages are not displayed:
32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS
32 BRAKE FAULT – R CO-PILOT PEDAL SENSOR REDUND LOSS
 - (5) On the landing gear control panel, select the ALTN BRAKE switch to the off position (Normal Braking Mode).
 - (6) Press and release the Pilot and Copilot LH & RH brake pedals.
 - (7) Make sure that the following INFO messages are not displayed:
32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS

- B. RH pilot is in command for takeoff and landing.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL32-00-063-01 BRAKE FAULT (ADVISORY) 32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS	C	(O) May be displayed provided: (a) None of the following messages are displayed: 32 BRAKE FAULT – BDCU 1 ALTN INOP 32 BRAKE FAULT – BDCU 2 ALTN INOP 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS, and (b) LH pilot is in command for takeoff and landing.

1. OPERATIONS (O)

- A. Before each flight, make sure that both the alternate and normal functions of the Brake Data Concentrator Unit are available to the Pilot and Copilot through the LH & RH brake pedal inputs:
- (1) Set the PARK BRAKE switch to the OFF position.
 - (2) On the landing gear control panel, select the ALTN BRAKE switch to the ON position.
 - (3) Press and release the Pilot and Copilot LH & RH brake pedals.
 - (4) Make sure that the following INFO messages are not displayed:
 32 BRAKE FAULT – BDCU 1 ALTN INOP
 32 BRAKE FAULT – BDCU 2 ALTN INOP
 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
 - (5) On the landing gear control panel, select the ALTN BRAKE switch to the off position (Normal Braking Mode).
 - (6) Press and release the Pilot and Copilot LH & RH brake pedals.
 - (7) Make sure that the following INFO messages are not displayed:
 32 BRAKE FAULT – BDCU 1 ALTN INOP
 32 BRAKE FAULT – BDCU 2 ALTN INOP
 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
 - (8) Set the PARK BRAKE switch to the ON position.
- B. LH pilot is in command for takeoff and landing.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL32-00-065-01 BRAKE FAULT (ADVISORY) 32 BRAKE FAULT – R CO-PILOT PEDAL SENSOR REDUND LOSS	C	(O) May be displayed provided: (a) None of the following messages are displayed: 32 BRAKE FAULT – BDCU 1 ALTN INOP 32 BRAKE FAULT – BDCU 2 ALTN INOP 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS, and (b) LH pilot is in command for takeoff and landing.

1. OPERATIONS (O)

A. Before each flight, make sure that both the alternate and normal functions of the Brake Data Concentrator Unit are available to the Pilot and Copilot through the LH & RH brake pedal inputs:

- (1) Set the PARK BRAKE switch to the OFF position.
- (2) On the landing gear control panel, select the ALTN BRAKE switch to the ON position.
- (3) Press and release the Pilot and Copilot LH & RH brake pedals.
- (4) Make sure that the following INFO messages are not displayed:
 32 BRAKE FAULT – BDCU 1 ALTN INOP
 32 BRAKE FAULT – BDCU 2 ALTN INOP
 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
- (5) On the landing gear control panel, select the ALTN BRAKE switch to the off position (Normal Braking Mode).
- (6) Press and release the Pilot and Copilot LH & RH brake pedals.
- (7) Make sure that the following INFO messages are not displayed:
 32 BRAKE FAULT – BDCU 1 ALTN INOP
 32 BRAKE FAULT – BDCU 2 ALTN INOP
 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS
 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS
- (8) Set the PARK BRAKE switch to the ON position.

B. LH pilot is in command for takeoff and landing.

CAS Message Indication	1.	2. Remarks and Exceptions
MMEL32-00-067-01 BRAKE FAULT (ADVISORY) 32 BRAKE FAULT – BRAKE CODE 2 INOP	C	(O) May be displayed provided none of the following info messages are displayed: 32 BRAKE FAULT – BDCU 1 ALTN INOP 32 BRAKE FAULT – BDCU 2 ALTN INOP 32 BRAKE FAULT – R PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – L PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – R CO-PILOT PEDAL SENSOR REDUND LOSS 32 BRAKE FAULT – L CO-PILOT PEDAL SENSOR REDUND LOSS <u>NOTE:</u> Main battery may deplete when aircraft is de-powered for more than 10 hours.

1. OPERATIONS (O)

- A. Before each flight, make sure that both the alternate and normal functions of the Brake Data Concentrator Unit are available to the Pilot and Copilot through the LH & RH brake pedal inputs:
- (1) Set the PARK BRAKE switch to the OFF position.
 - (2) On the landing gear control panel, select the ALTN BRAKE switch to the ON position.
 - (3) Press and release the Pilot and Copilot LH & RH brake pedals.

CAS Message Indication	1.	2. Remarks and Exceptions
M MEL35-00-001-01 CREW OXY LO PRESS (CAUTION)	A	(O) May be displayed and observer seat occupied provided: (a) Oxygen pressure is checked to be above minimum required oxygen pressure before each flight, (b) Crew oxygen EICAS Pressure Readout is verified operative before each flight, (c) Crew oxygen EICAS Pressure is monitored during flight, (d) Crew oxygen masks are verified operative before each flight, and (e) Repairs are made within one flight day.

1. OPERATIONS (O)

A. Before each flight, do the steps that follow:

- (1) Make sure, by two methods of indication, that the crew oxygen bottle shows the same pressure value. The EICAS oxygen pressure indication can be compared with either the Ground Service Panel pressure gauge or the Crew Oxygen Bottle pressure gauge.

NOTE: If indications on the bottle pressure gauge are not clearly visible to the flight crew through the sight glass, the oxygen bottle enclosure must be removed by qualified persons as per Section 1, item 35-11-05.

- (2) Use the chart that follows to read the oxygen pressure quantity on the pressure gauge of the oxygen bottle.

FULL PRESS PSI vs AMBIENT TEMPERATURE

OXY CYC SERVICING: CHARGE CYL AT RATE NOT TO EXCEED 200 PSI/MIN TO "FULL" PRESSURE										
COCKPIT* TEMP	CELSIUS	-40	-29	-18	-7	5	16	21	27	38
	FAHRENHEIT	-40	-20	0	19	41	61	70	81	100
FULL PRESSURE	PSI	1340	1435	1530	1620	1710	1805	1850	1900	1990
*COCKPIT TEMPERATURE IS USED AS AN APPROXIMATION FOR THE OXYGEN COMPARTMENT AMBIENT TEMPERATURE										

- (3) Make sure that the oxygen pressure indication in the flight compartment is above 1300 psi.

B. Before each flight, do the steps that follow:

- (1) Make sure that the oxygen pressure is above the minimum limits for a three member crew for the intended flight.
- (2) Make sure that the flight crew oxygen masks have sufficient oxygen flow.

NOTE: If the observer seat is occupied, for the intended flight, the observer seat mask must be checked to be operative.

C. During the flight, do the steps that follow:

- (1) Monitor the flight crew oxygen pressure. If an oxygen leak is suspected, initiate the descent to a safe altitude.

CAS Message Indication	1.	2. Remarks and Exceptions
M MEL35-00-001-02 CREW OXY LO PRESS (CAUTION)	B	(O) May be displayed provided: (a) Oxygen pressure is checked to be above minimum required oxygen pressure before each flight, (b) Crew oxygen EICAS Pressure Readout is verified operative before each flight, (c) Crew oxygen EICAS Pressure is monitored during flight, (d) Crew oxygen masks are verified operative before each flight, and (e) Observer seat is not occupied.

1. OPERATIONS (O)

A. Before each flight, do the steps that follow:

- (1) Make sure, by two methods of indication, that the crew oxygen bottle shows the same pressure value. The EICAS oxygen pressure indication can be compared with either the Ground Service Panel pressure gauge or the Crew Oxygen Bottle pressure gauge.

NOTE: If indications on the bottle pressure gauge are not clearly visible to the flight crew through the sight glass, the oxygen bottle enclosure must be removed by qualified persons per Section 1, Item 35-11-05.

- (2) Use the chart that follows to read the oxygen pressure quantity on the pressure gauge of the oxygen bottle.

FULL PRESS PSI vs AMBIENT TEMPERATURE

OXY CYC SERVICING: CHARGE CYL AT RATE NOT TO EXCEED 200 PSI/MIN TO "FULL" PRESSURE										
COCKPIT* TEMP	CELSIUS	-40	-29	-18	-7	5	16	21	27	38
	FAHRENHEIT	-40	-20	0	19	41	61	70	81	100
FULL PRESSURE	PSI	1340	1435	1530	1620	1710	1805	1850	1900	1990
*COCKPIT TEMPERATURE IS USED AS AN APPROXIMATION FOR THE OXYGEN COMPARTMENT AMBIENT TEMPERATURE										

B. Before each flight, do the steps that follow:

- (1) Make sure that the oxygen pressure is above the minimum limits for the intended flight.
- (2) Make sure that the flight crew oxygen masks have sufficient oxygen flow.

C. During the flight, monitor the flight crew oxygen pressure. If an oxygen leak is suspected, initiate the descent to a safe altitude.
